

Forensic Medicine (MS)

A Future of Investigating the Past.

PROGRAM OVERVIEW

Our Master of Science (MS) in Forensic Medicine program at our Philadelphia campus prepares students to become lifelong learners by developing analytical and critical-thinking skills.

Philadelphia College of Osteopathic Medicine (PCOM) has been at the forefront of medicine for more than a century. Our holistic approach to investigation teaches students to consider all aspects of a crime scene—scientific and environmental, as well as psychological, factors at play. They search for answers together with peers in mock crime scenes, accident reconstructions and clandestine gravesites. Students also benefit greatly from interacting with our esteemed faculty members with years of experience in their fields. Graduates of our program have the analytical and critical-thinking skills to help achieve justice for those who are unable to speak for themselves.

CURRICULUM

Our highly experiential curriculum prepares students to work in the field of forensics. The program is designed with flexible options for working professionals—taking place in-person and online over a two-year period.

YEAR 1: During the first year, students experience an online fall term, as well as face-to-face classes one weekend every month, covering forensic medicine principles and pathology. They also learn about research-design and methodology through an online component.

YEAR 2: In year two, students continue their work online while conducting a capstone project that could potentially involve working with a coroner's office on interesting cases and crime-scene topics. Courses will focus on law, evidentiary procedure, bioethics and evidence-based medicine.

PCOM Forensic Medicine students explore a wide range of topics, including: Forensic Pathology, Anthropology, Odontology and Entomology, Fingerprint, Blood-Splatter and Crime-Scene Analysis, Ballistics, Toxicology, DNA, Arson and Fire Investigation, and Sexual-Assault Victim Evaluation.
