# Philadelphia College of Osteopathic Medicine
## 2011-2016 Calendar

### Summer 2011
- **May 22**: Sunday, Georgia DO and Graduate Program Commencement
- **May 23**: Monday, Summer Term Begins
- **May 30**: Monday, Memorial Day (No Classes, Administrative Offices Closed)
- **June 5**: Sunday, Philadelphia DO Commencement
- **July 4**: Monday, Independence Day (No Classes, Administrative Offices Closed)
- **July 29**: Friday, Philadelphia Graduate Program Commencement
- **August 12**: Friday, Summer Term Ends

### Fall 2011
- **August 15**: Monday, Fall Term Begins
- **November 11**: Friday, Fall Term Ends

### Winter 2011-2012
- **November 14**: Monday, Winter Term Begins
- **November 24-25**: Thursday-Friday, Thanksgiving Holiday (No Classes, Administrative Offices Closed)
- **December 25-26**: Sunday-Monday, Christmas Holiday (No Classes, Administrative Offices Closed)
- **January 16**: Monday, Martin Luther King Holiday (No Classes, Administrative Offices Closed)
- **February 17**: Friday, Winter Term Ends

### Spring 2012
- **February 20**: Monday, Spring Term Begins
- **May 18**: Friday, Spring Term Ends

### Summer 2012
- **May 21**: Monday, Summer Term Begins
- **May TBA**: Georgia DO and Graduate Program Commencement
- **May 28**: Monday, Memorial Day (No Classes, Administrative Offices Closed)
- **June TBA**: Philadelphia DO Commencement
- **July TBA**: Philadelphia Graduate Program Commencement
- **August 17**: Friday, Summer Term Ends

### Fall 2012
- **August 20**: Monday, Fall Term Begins
- **September 3**: Monday, Labor Day (No Classes, Administrative Offices Closed)
- **November 16**: Friday, Fall Term Ends

### Winter 2012-2013
- **November 19**: Monday, Winter Term Begins
- **November 22-23**: Thursday-Friday, Thanksgiving Holiday (No Classes, Administrative Offices Closed)
- **December 25**: Tuesday, Christmas Day (No Classes, Administrative Offices Closed)
- **January 1**: Tuesday, New Year's Day (No Classes, Administrative Offices Closed)
- **January 21**: Monday, Martin Luther King Holiday (No Classes, Administrative Offices Closed)
- **February 28**: Friday, Winter Term Ends

### Spring 2013
- **March 4**: Monday, Spring Term Begins
- **May 27**: Monday, Memorial Day (No Classes, Administrative Offices Closed)
- **May TBA**: Georgia DO and Graduate Program Commencement
- **May 31**: Friday, Spring Term Ends

### Summer 2013
- **June 3**: Monday, Summer Term Begins
- **June TBA**: Philadelphia DO Commencement
- **July 4**: Thursday, Independence Day Holiday (No Classes, Administrative Offices Closed)
- **July TBA**: Philadelphia Graduate Program Commencement
- **August 16**: Friday, Summer Term Ends

### Fall 2013
- **August 19**: Monday, Fall Term Begins
- **September 2**: Monday, Labor Day (No Classes, Administrative Offices Closed)
- **November 15**: Friday, Fall Term Ends

### Winter 2013-2014
- **November 18**: Monday, Winter Term Begins
- **November 28-29**: Thursday-Friday, Thanksgiving Holiday (No Classes, Administrative Offices Closed)
- **December 25**: Wednesday, Christmas Day (No Classes, Administrative Offices Closed)
- **January 1**: Wednesday, New Year's Day (No Classes, Administrative Offices Closed)
- **January 20**: Monday, Martin Luther King Holiday (No Classes, Administrative Offices Closed)
- **February 28**: Friday, Winter Term Ends

MISSION

Philadelphia College of Osteopathic Medicine (PCOM) is dedicated to the education of students in medicine, health and behavioral sciences. The College fosters the growth of the osteopathic profession by training physicians through programs of study guided by osteopathic medical tradition, concept and practice. PCOM is committed to the advancement of knowledge and intellectual growth through teaching and research, and to the well-being of the community through leadership and service.

EDUCATIONAL GOALS

The College’s educational goals focus on presenting high-quality, comprehensive programs of study that embrace the following expectations of student learning:

– Students will demonstrate a central core of biomedical or behavioral science knowledge in their field of study, including theory, foundations, clinical skills and applied clinical/practical application as appropriate to the specific academic program.

– Students will demonstrate communication skills through clinical assessments, group discussion and/or written or oral presentation in their respective fields.

– Students will demonstrate an understanding of scientific inquiry by designing, conducting, presenting or interpreting research in their field of study and appropriate to their academic program.

– Students will identify, retrieve, understand, analyze, synthesize and apply information collected from various sources and in varied formats, including those requiring skills in the use of information technology.

GEORGIA BRANCH CAMPUS FOCUS

The primary focus of Georgia Campus – PCOM is to recruit and educate students from Georgia and the surrounding states. The Georgia Campus seeks to retain graduate osteopathic physicians, pharmacists, biomedical scientists and other health care professionals in the southeast, to serve the health needs of the region and advance the professions of osteopathic medicine and pharmacy.

THE COLLEGE

When osteopathic schools were forming throughout the country in the 1890s, two students at the Northern Institute of Osteopathy in Minneapolis, Mason W. Pressly and Oscar John Snyder, targeted Philadelphia as a future home for an
osteopathic medical college. Although the City of Brotherly Love had a rich history of medicine, it had but one “osteopathist” by the time Pressly and Snyder graduated in 1898 and 1899, respectively. PCOM’s founders were outspoken, pioneering physicians who explored and taught the use of manipulative therapy in the prevention of disease long before the use of penicillin and modern drugs. The two young osteopathic physicians followed through with their vision, incorporating the Philadelphia College and Infirmary of Osteopathy on January 24, 1899. The first PCIO degree was awarded to a transfer student; the first PCIO class, composed of two students, graduated in February 1900 from the fledgling College then located at 21 South 12th Street.

The College prospered and moved through a number of sites in its first century, including 1715 North Broad Street, 832 Pine Street, 19th and Spring Garden, 48th and Spruce, and finally, City Avenue. During this growth period, the medical curriculum intensified, osteopathic research was initiated, and clinic and hospital services grew rapidly as the medical school’s student body and faculty expanded dramatically.

The medical program trains students who will become skilled, caring and successful physicians guided by the strengths of osteopathic principles refined during a century of medical practice, teaching and research. We at PCOM are proud of our osteopathic heritage. More than 60,000 osteopathic physicians practicing today are an integral part of America’s health care delivery system. Today, all treatment modalities are available to osteopathic physicians, who may prescribe drugs, perform surgery and specialize in any area of medicine. DOs, whose primary care training prepares them to be superior diagnosticians, are represented throughout the United States and in all branches of military service.

After nearly a century of training physicians, PCOM opened its first graduate degree program, the Master of Science in Biomedical Sciences, in 1993. The first five graduates in June 1995 marked the beginning of yet another period of growth for the College – the development of a graduate school. Today, more than 800 graduate students are enrolled in PCOM’s master’s and doctoral degree programs. PCOM’s graduate students pursue studies at the master’s level in biomedical sciences, counseling and clinical health psychology, school psychology, organizational development, forensic medicine and physician assistant studies. Doctoral-level study is offered in clinical psychology and school psychology with certificate programs for professionals seeking respecialization in clinical psychology or certification as school psychologists.

In August 2005, the first entering osteopathic medical class began their studies at Georgia Campus – Philadelphia College of Osteopathic Medicine (GA-PCOM), the College’s new branch campus located in Suwanee, Georgia, a suburb of Atlanta. GA-PCOM’s mission is to help fill the need for more physicians and other health professionals in Georgia and the surrounding states, areas that have been affected by population increases and subsequent shortages. The Master of Science in Biomedical Sciences program was inaugurated at the Georgia Campus
in the 2006-2007 academic year, and a School of Pharmacy opened in Fall 2010.

Nearly 70 percent of main campus students are Pennsylvanians, and 75 percent of the Georgia Campus students are from the southeastern states. More than 200 colleges and 21 states are represented in the student body. Supported by the best modern technology, PCOM emphasizes a practitioner-scholar approach and community orientation in all of its degree programs to prepare students for the new challenges facing the behavioral and the medical sciences in the 21st century.
DEGREES AND CERTIFICATES AWARDED

Doctor of Osteopathic Medicine (DO)
– Philadelphia and Georgia Campuses

Doctor of Pharmacy (PharmD)
– Georgia Campus

Doctor of Psychology (PsyD) – Clinical Psychology
– Philadelphia Campus

Doctor of Psychology (PsyD) – School Psychology
– Philadelphia Campus

Master of Science in Counseling and Clinical Health Psychology (MS)
– Philadelphia Campus

Master of Science in School Psychology (MS)
– Philadelphia Campus

Educational Specialist in School Psychology (EdS)
– Philadelphia Campus

Certificate of Graduate Studies in Organizational Development and Leadership
– Philadelphia Campus

Master of Science in Organizational Development and Leadership (MS)
– Philadelphia and Georgia Campuses

Certificate of Advanced Graduate Studies in Psychology
– Philadelphia Campus

Master of Science in Biomedical Sciences (MS)
– Philadelphia and Georgia Campuses

Certificate of Graduate Study in Biomedical Sciences
– Philadelphia and Georgia Campuses

Master of Science in Health Sciences – Physician Assistant Studies (MS)
– Philadelphia Campus

Master of Science in Forensic Medicine (MS)
– Philadelphia Campus

Clinical Master of Science (MSc)
– Philadelphia Campus
Matriculation and Degree Conferral
Matriculation and attendance at the College are privileges granted to the student in consideration of performance of specified assignments and the maintenance of established standards of personal and professional conduct. The College reserves the right, and the student, by the act of matriculation, concedes to the College the right to require withdrawal at any time the College deems it necessary to safeguard PCOM standards of scholarship, conduct and compliance with regulations, or for such other reasons deemed appropriate by the College. If the Provost or the President determine that the presence of a student would be disruptive to the College or represents a possible threat to the safety of faculty, students, staff, patients, clients or others, the Provost or the President may immediately withdraw the student in question from all activities, placing the student on leave of absence pending investigation, required documentation and/or referral for committee action.

Each candidate for a degree or certificate of graduate study must be free of indebtedness to the College. Neither a diploma nor an academic transcript will be given until all financial obligations to PCOM have been met.

Accreditation
PCOM is accredited by the Commission on Higher Education of the Middle States Association of Colleges and Schools, 3624 Market Street, Philadelphia, PA 19104; 215-662-5606. The Commission on Higher Education is recognized by the U.S. Secretary of Education and the Commission on Recognition of Postsecondary Accreditation. In 2005, the Commission approved the extension of the scope of institutional accreditation to PCOM's Georgia branch campus.

The College is also approved by the Department of Education of the Commonwealth of Pennsylvania, which granted recognition in 2004 to GA-PCOM as an approved PCOM branch campus. GA-PCOM is authorized by the Nonpublic Postsecondary Education Commission of Georgia as a branch campus of PCOM.

The doctor of osteopathic medicine programs at PCOM are accredited by the Commission on Osteopathic College Accreditation of the American Osteopathic Association.

PCOM's physician assistant program is accredited by the Accreditation Review Commission on Education for the Physician Assistant (ARC-PA).

The doctoral program in clinical psychology is accredited by the Committee for Accreditation of the American Psychological Association (APA), 202-336-5979; www.apa.org/ed/accreditation.

The doctoral, educational specialist and MS programs in school psychology are approved by the National Association of School Psychologists (NASP). The certification program in school psychology is approved by the Department of
Education, Commonwealth of Pennsylvania.

PCOM’s PsyD in school psychology is also approved by the Association of State and Provincial Psychology Boards (ASPPB) for its listing of programs meeting designation criteria.

PCOM’s Doctor of Pharmacy program has been granted candidate status by the Accreditation Council for Pharmacy Education (ACPE), 20 North Clark Street, Suite 2500, Chicago, IL 60602-5109, 312/644-3575; FAX 312/664-4652, website www.acpe-accredit.org.”

With respect to clarification of the meaning of candidate accreditation status, graduates of a program so designed would, in the opinion of ACPE, have the same rights and privileges of those graduates from a fully accredited program. The candidate accreditation status denotes a developmental program that is expected to mature in accord with stated plans within a defined time period. It should be underscored, however, that decisions concerning eligibility for licensure by examination or reciprocity reside with the respective state boards of pharmacy in accordance with their state statutes and administrative rules. Should candidate accreditation status be awarded to a program, ACPE would, however, make its position known and make recommendations consistent with that position.

Documents of accreditation are on file in the President’s Office, with copies in the Office of the Provost, and may be seen upon request.

Memberships
PCOM is a member of the American Council on Education, the Association of Academic Health Centers, the American Association of Colleges of Osteopathic Medicine and the Council for the Advancement and Support of Education.

Student Handbooks and Academic Program Handbooks Containing Vital Student Information
College policies and other student information are available in the student handbooks, which are available online through Nucleus. The General Student Handbook, which applies to all academic programs, describes educational resources and essential services, registration, campus regulations, insurance, extracurricular activities and student government, and College policies on privacy, sexual harassment, equal opportunity, grievances, safety, substance abuse, ethics and conduct.

Each program of study also publishes an academic handbook that describes curriculum, graduation requirements, examination and grading policy, academic standards, remediation procedures, clinical education requirements and other academic and student support information specific to the respective degree program. The academic handbooks are available on Nucleus, as well as in each academic department office.

ADMISSIONS POLICIES AND PROCEDURES

Doctor of Osteopathic Medicine (DO)

Admission to PCOM is competitive and selective. Acceptance by the Faculty Committee on Admissions is based on the applicant's fulfillment of undergraduate course requirements, grade point average (GPA), Medical College Admission Test (MCAT) scores and a personal interview with the committee.

PCOM seeks well-rounded, achievement-oriented persons whose character, maturity and sense of dedication point to a productive life as an osteopathic physician. PCOM is an institution that has historically sought diversity in its student population and actively recruits under-represented minority students and non-traditional students, including veterans, who often offer exceptional potential for becoming outstanding physicians.

Requirements for Admission
Prior to matriculation at either campus site, each applicant must meet the following PCOM admission requirements.

1. Satisfactory completion of a bachelor's degree from a regionally accredited college or university is necessary. Applications from students with three years of exceptional undergraduate work completed may be considered.

2. The satisfactory completion of these specific undergraduate semester hours must be demonstrated by the applicant.
   - Eight semester hours each, including two semester hours of laboratory: general chemistry, organic chemistry, biology and physics.
   - Six semester hours of English composition and literature.

3. Each applicant must sit for the Medical College Admission Test, which is given multiple times each year. Prospective students are urged to take the test as early as possible and certainly not later than August of the year prior to desired matriculation. The MCAT must be taken within three years of desired matriculation.

Application Steps and Schedule
All inquiries about admission to the DO program should be directed to PCOM’s Office of Admissions. PCOM participates in the centralized online application service for the colleges of osteopathic medicine, AACOMAS.

1. Beginning in May, prospective osteopathic medical students may submit their application through a secure Web server, AACOMAS-Online, at www.aacom.org. The AACOMAS application should be complete and indicate the campus to which the prospective osteopathic medical student is
applying. The application must be accompanied by the required fee. The application will be processed once all official transcripts and MCAT scores are received by AACOMAS and will be forwarded to PCOM.

2. When the processed application is received in the PCOM Admissions Office from AACOMAS, applicants will receive a PCOM supplemental application via electronic notification to their e-mail address as provided on the AACOMAS application. This must be completed, signed and returned, along with a fee of $50.

3. A letter of recommendation is required from the premedical committee or premedical advisor of the undergraduate college that granted or will grant a bachelor's degree, regardless of academic major, course of study or date of graduation. If that is not possible, a letter from the academic advisor or dean of the same institution may substitute.

4. Another letter of recommendation, preferably from an osteopathic physician, is strongly suggested but not required.

5. All applications and transcripts to AACOMAS must be submitted no later than February 1 of the year of desired matriculation. PCOM supplemental applications and all supporting credentials must be received in the Admissions Office by March 1. Early application and fulfillment of all credential requirements is strongly recommended, since a rolling admissions process is followed with review of applications beginning in July.

Interviews
Each campus has a PCOM Faculty Committee on Admissions that will review all completed applications, select those applicants to be interviewed and inform them in writing, via e-mail, of the interview date, time and place. Although all applicants who are eventually accepted must be interviewed, the granting of an interview should not be construed as evidence of final acceptance.

Interviews begin in September for the Philadelphia Campus and in October for the Georgia Campus and continue through March. Most interview sessions are conducted in the morning with some scheduled in the afternoon. During the course of the morning or afternoon, applicants have an opportunity to meet with a representative from the Financial Aid Office, sit in on classes and tour the campus. PCOM conducts a panel interview that includes the applicant, an osteopathic physician and another member of the committee and lasts approximately one half hour.

Admissions Decision
Interviewed candidates are usually notified within one month from the date of interview. Accepted applicants are asked to send a $250 non-refundable tuition prepayment according to the following schedule:

1. Those accepted prior to November 15 will have until December 14.
2. Those accepted between November 15 and January 14 will have 30 days.

3. Those accepted between January 14 and June 14 will have 14 days.

4. Those accepted on or after June 15 may be asked for an immediate deposit.

An additional deposit of $2,000 is required on April 15 from all confirmed students. This fee is non-refundable and, along with the initial $250 deposit, will be credited to the student’s tuition account.

PCOM does not have an Early Decision Program.

To ensure that students accepted to PCOM will be permitted to perform clerkships during their third and fourth clinical years, and thus ensure them the opportunity to successfully complete their DO degree requirements, PCOM requires all first year students to complete a criminal background check prior to matriculation. All students must have their criminal background checks processed through PreCheck. The Admissions Office must have this information on file prior to orientation; students will not be allowed to start classes without this information.

During the summer months, when the admissions process is complete, candidates who are not accepted may request in writing information about their application or make an appointment with an admissions counselor.

Transfer Students and Advanced Standing
PCOM does not routinely accept transfer students; however, a transfer application may be considered under extenuating circumstances and depending on places available in the class. Consideration will be given only to a student who is in good standing at an AOA-accredited college of osteopathic medicine or who is eligible for re-admission to the previously attended college of osteopathic medicine.

The initial request for transfer must originate from the dean of the college or university from which the student wishes to transfer and must be directed to the dean of the PCOM campus to which he or she is applying. Application materials must be submitted and a formal interview with the Faculty Committee on Admissions will be required.

If accepted, a transfer student will be given credit for courses successfully passed at the previous college that meet PCOM’s curriculum requirements. A minimum of two years must be completed at PCOM for a student to be eligible to receive the DO degree.

For all other students entering the DO program, PCOM does not grant advanced standing or credit for prior learning or for courses completed at other institutions.

Technical Standards for Matriculation
All PCOM applicants and enrolled students must meet the technical standards set forth below. Accepted candidates are asked to review and acknowledge PCOM’s
technical standards for admission and matriculation.

The holder of a DO degree must have the knowledge and skills to function in a broad variety of clinical situations and to render a wide spectrum of patient care. In order to carry out the activities described below, candidates for the DO degree must be able to consistently, quickly and accurately integrate all information received, and they must have the ability to learn, integrate, analyze, and synthesize data in the classroom and clinical settings. All students must demonstrate the competencies required by faculty and must have the capabilities to complete their course of study in a reasonably independent manner. The standards are:

Observation and Sensory Skills: Candidates and students must have sufficient vision to be able to observe demonstrations, experiments, and laboratory exercises in the basic sciences. They must be able to observe a patient accurately at a distance and close at hand for proper evaluation and treatment integration.

Communication Skills: Candidates and students should be able to speak, hear and observe patients in order to elicit information, examine patients, describe changes in mood, activity and posture, and perceive non-verbal communications. They must be able to communicate effectively and sensitively with patients. Communication includes not only speech but also reading and writing. They must also be able to communicate effectively and efficiently in oral and written form with all members of the health care team.

Motor Skills: Candidates and students should have sufficient motor function and strength and mobility to execute movements required to provide general care and emergency treatment to patients. Examples of emergency treatment required of physicians are cardiopulmonary resuscitation, administration of intravenous medication, the application of pressure to stop bleeding, the opening of obstructed airways, the suturing of simple wounds, and the performance of simple obstetrical maneuvers. Such actions require coordination of both gross and fine muscular movements, equilibrium and functional use of the senses of touch and vision. Additionally, to perform osteopathic manipulation, upright posture with sufficient lower extremity and body strength is required.

Conceptual, Integrative, and Quantitative Skills: These skills include measurement, calculation, reasoning, analysis and synthesis. Problem solving, the critical skill demanded of physicians, requires all of these intellectual abilities. In addition, candidates and students should be able to comprehend three dimensional relationships and to understand the spatial relationships of structures.

Behavioral and Social Skills: Candidates and students must possess the emotional health required for full utilization of their intellectual abilities, the exercise of good judgment, the prompt completion of all responsibilities attendant to the diagnosis and care of patients, and the development of mature,
sensitive and effective relationships with patients. Candidates and students must be able to tolerate physically taxing workloads and to adapt to changing environments, to display flexibility and to learn to function in the face of uncertainties inherent in the clinical problems of many patients. Compassion, integrity, concern for others, interpersonal skills, interest and motivation are all personal qualities that will be assessed during the admissions and the educational processes.

**Technical Standards for Osteopathic Manipulative Medicine and Physical Diagnosis**

A core component of osteopathic medical education is using touch for diagnosis and therapeutic purposes. To acquire competencies in physical diagnosis and osteopathic manipulative medical diagnosis and treatment, all students are required to touch others and to be touched.

The College realizes that emergencies may occur after matriculation, and will address these concerns as the need arises.

**Professional Expectations**

Students are expected to adhere to a standard of behavior and conduct consistent with the high standards of the healing and scientific profession. All students are expected to:

1. Respect the right of their fellow students to pursue their studies in a professional environment conducive to study.

2. Maintain professional interpersonal relationships by demonstrating civility and respect for each other.

3. Uphold the highest standard of academic honesty and integrity.

4. Show respect for the diversity that exists among students, faculty and patients in regard to disability, social background, age, gender, religious beliefs, race, sexual orientation, and particular disease process.

5. Fulfill their responsibilities to their peers and patients in group work, including clinical clerkships and outside training assignments.

6. Adhere to all of the policies of the College, including those prohibiting discrimination or harassment.

PCOM maintains a curriculum that stresses the importance of the body as a unit, and the applicability of touch as an integral part of diagnosis and therapy for all patients of both genders. As part of this training, students will participate in physical examination and osteopathic manipulative treatment by fellow students. This physical examination is critical to learning the skills required of practicing osteopathic physicians; therefore, it is mandatory that all matriculating students understand and accept these responsibilities. These responsibilities include:
1. Adhere to appropriate dress as determined by the faculty, i.e. gym shorts, tee shirt, sports bra, as necessary to participate in the physical examination experience.

2. Allow other students to see and touch them so that all become proficient in physical diagnosis and manipulative treatment.

3. Assume the role of the patient to develop an understanding of the patient experience.

4. Demonstrate professional demeanor at all times. Students also understand that they are required to meet all of the standards and expectations for classroom testing and assessment.

**English Proficiency Requirement**

Every applicant whose native language is not English, or whose undergraduate instruction was not in English, must provide an English proficiency test score. Any applicant whose native language is not English must demonstrate objective competency in English by satisfactory performance on the Test of English as a Foreign Language (TOEFL). A score is considered too old, and will not be accepted, if it is more than two years old from the start of the applicant's admissions term. Country of citizenship does not exempt applicants from this requirement. Language of instruction at the college or university level, and how recent it has been, are the determining factors in meeting this requirement. The minimum required score for the IBT (Internet Based Testing) is 79 and a minimum score of 26 is required for the speaking component. General writing assistance is available for theses and dissertations; however, as an institution offering only graduate and professional programs, PCOM does not offer remedial ESL coursework.

Applicants are exempt if:

1. English is the exclusive language of instruction at the undergraduate level; or

2. They have earned a degree from a regionally accredited U.S. college or university not more than five years prior to the anticipated semester of enrollment; or

3. They have completed at least two full-time semesters of graded coursework, exclusive of ESL courses, in a U.S. college or university, or at an institution outside the U.S. where English is the exclusive language of instruction, not more than five years prior to the anticipated semester of enrollment.

**International Applicants**

PCOM is authorized to host F-1 visa students only. At the time of confirmation of acceptance, an international student is required to complete a Certificate of Financial Responsibility form and provide financial documentation. The
financial documentation must indicate that the confirmed applicant has sufficient funding for tuition, fees and living expenses for the entire duration of his or her program or a maximum of five years.

It is the sole responsibility of the confirmed applicant to determine if the degree received from PCOM and any licenses obtained from the United States will be acceptable to practice this field in his or her country. PCOM does not guarantee that every international country will allow the practice of the profession for which PCOM’s degrees are received and licensing obtained.

**Doctor of Pharmacy (PharmD)**

Admission to PCOM School of Pharmacy – Georgia Campus is competitive and selective. PCOM seeks well-rounded, achievement-oriented individuals whose maturity and dedication will lead them to a successful career as a pharmacist. Acceptance by the Admissions Committee is based on the applicant’s fulfillment of prerequisite coursework, grade point average (GPA), Pharmacy College Admission Test (PCAT) scores, letters of recommendation and a personal interview.

**Requirements for Admission**

Satisfactory completion of the required prerequisite coursework from an accredited college or university is necessary. A baccalaureate degree, graduate degree or other professional degree is not required for admission to the School of Pharmacy; however, students possessing a previous degree will be given additional consideration for admission. Prior to matriculation, competitive applicants must have completed the prerequisite coursework and obtained a cumulative grade point average of 2.50 or higher on a 4.0 scale for all undergraduate coursework completed. All science and math prerequisites must have been completed within the last 10 years with a letter grade of “C” or higher. There is no minimum score for the PCAT; however, composite scores less than 50% or individual subtest scores less than 25% are less likely to be competitive. Prerequisite courses are as follow:

General Biology I and II with live lab . . . . . . . . . . . . . . . . . . . . . .8 credits*
  (Cellular Biology, Molecular Biology or Zoology with live lab are also acceptable)
General Chemistry I and II with live lab . . . . . . . . . . . . . . . . . . . .8 credits
Organic Chemistry I and II with live lab . . . . . . . . . . . . . . . . . . . .8 credits
Physics with live lab . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .4 credits
Calculus . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .3 credits
Statistics . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .3 credits
English . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . .6 credits
  (6 credits Composition or 3 credits Composition and 3 credits Literature)

*Credits are listed as semester credits. To determine equivalent quarter credits, multiply semester credits by 1.5 (2 semester credits = 3 quarter credits).
Economics ......................................................... 3 credits
Speech ............................................................ 3 credits
Social/ Behavioral Science ................................. 3 credits
  (e.g., History/Psychology/Sociology/Ethics)
Humanities ...................................................... 3 credits
  (e.g., Art, Foreign Language, Music, Religion)
Electives .......................................................... 8 credits

Application Steps and Schedule
All inquiries about admission to the Pharmacy program should be directed to
PCOM’s Office of Admissions, 4170 City Avenue, Philadelphia, PA 19131, (215)
871-6700 or (800) 999-6998. PCOM School of Pharmacy – Georgia Campus
participates in the centralized Pharmacy College Application Service
(PharmCAS) for applicants applying to colleges and schools of pharmacy.
Application to PCOM School of Pharmacy – Georgia Campus consists of a
completed PharmCAS Application and a PCOM School of Pharmacy
Supplemental Application.

Beginning in June, prospective pharmacy students may submit their application
through PharmCAS www.pharmcas.org. The PharmCAS application will include
all undergraduate and graduate coursework, official transcripts, three letters of
recommendation and PCAT score(s). PharmCAS applications must be completed
no later than March 1 of the year of desired matriculation; however, applicants
are encouraged to apply well ahead of this date.

Upon receipt of the PharmCAS Application by the Office of Admissions, a PCOM
School of Pharmacy Supplemental Application will be sent via e-mail and must
be completed, signed, and sent, along with the $50 fee, directly to the PCOM
Office of Admissions address printed on the application. The deadline for the
PCOM School of Pharmacy Supplemental Application is April 1 of the year of
desired matriculation.

When the PharmCAS Application, including transcripts, letters of
recommendation, and PCAT score(s), as well as the PCOM School of Pharmacy
Supplemental Application (including fees) is received in the Office of
Admissions, the application will be considered complete. Early application and
fulfillment of all requirements are strongly recommended, because a rolling
admissions process is followed with review of completed applications beginning
in early Fall.

Interviews
All applications are processed in Philadelphia, PA; however, interviews are
conducted at the PCOM School of Pharmacy – Georgia Campus in Suwanee,
Georgia and are scheduled by e-mail using the e-mail address indicated on the
student’s admissions application. Please check e-mail frequently and be sure to
notify the Office of Admissions of any change.
Interviews begin in October and continue until the class has been selected. During the course of the interview sessions, applicants will have an opportunity to meet with a representative from the Financial Aid Office and tour the campus. PCOM conducts a panel interview that lasts approximately one half hour with faculty members from the School of Pharmacy.

Admissions Decisions
Interviewed candidates are usually notified within one month from the date of interview. Accepted applicants are asked to send a non-refundable $500 tuition prepayment that will be credited to the student’s tuition account. The School of Pharmacy does not have an Early Decision Program.

PCOM requires all first year students to complete a criminal background check prior to matriculation. The Office of the Dean must have this information on file prior to orientation; students will not be allowed to start classes without this information. Confirmed students will be advised by the Admissions Office as to how and when to begin the process.

Transfer Students
PCOM School of Pharmacy – Georgia Campus does not routinely accept transfer students; however, a transfer application may be considered under extenuating circumstances and depending on places available in the class. Consideration will be given only to a student who is in good standing at an ACPE-accredited college or school of pharmacy who is eligible for re-admission to the previously attended college or school. The initial request for transfer must originate from the dean of the college or school of pharmacy from which the student wishes to transfer and must be directed to the dean of the PCOM School of Pharmacy – Georgia Campus. Application materials must be submitted and a formal interview with the Admissions Committee will be required. If accepted, a transfer student will be given credit for courses successfully passed at the previous college that meet PCOM’s curriculum requirements. A minimum of two years must be completed at PCOM for a student to be eligible to receive the PharmD degree.

Technical Standards for Matriculation
All PCOM School of Pharmacy – Georgia Campus applicants and enrolled students must meet the technical standards set forth below. Accepted candidates are asked to review and acknowledge PCOM’s technical standards for admission and matriculation.

The holder of a PharmD degree must have the knowledge, skills, attitudes and values to function in a variety of pharmacy practice settings. In order to ultimately perform the activities of a pharmacist, candidates for the PharmD degree must be able to consistently, quickly and accurately assimilate a large body of medical information received in a variety of formats including written, oral and sensory in order to prepare pharmaceutical plans for their patients. These plans may involve ongoing assessment and counseling as well as the preparation of prescription and nonprescription medications or dietary
supplements. These activities involve not only intellectual ability, but also observational, communication, motor, and behavioral skills.

**Communication Skills:** A candidate must be able to read, write, speak and comprehend the English language with sufficient mastery to accomplish the following:

– Complete the didactic, clinical and laboratory curricular requirements in a timely, competent, professional and accurate manner

– Effective and efficient communication; in oral, written and computerized forms, with all members of the health care team

– Effective, compassionate and sensitive communication with patients. The focus of patient communication is to elicit information, examine, describe changes in mood, activity and posture, and perceive nonverbal communication

– Communication includes not only speech but also reading, writing, and computer literacy

**Observation and Sensory Skills:** Observation necessitates the functional use of the sense of vision and somatic sensation and is enhanced by the functional use of all the other senses. Candidates and students must have sufficient visual acuity to be able to:

– Observe presentations, demonstrations, experiments, and laboratory exercises in the pharmaceutical and clinical sciences

– Observe a patient accurately at a distance and close at hand

– Interpret drug information in the form of printed and handwritten prescriptions, drug labels, package inserts, texts and electronic media

**Motor Skills:** A candidate should have sufficient fine and gross motor skills, equilibrium, strength, mobility, and functional use of the senses of touch and vision to accurately execute movements required in the practice of pharmacy. This would include, but is not limited to:

– Preparation of prescriptions through compounding, reconstitution, counting, pouring and weighing of liquids, tablets and powders

– Preparation of sterile solutions for ophthalmic or intravenous use

– Administering an IM/SQ injection

– Provision of general care and emergency treatment (e.g. first aid or cardiopulmonary resuscitation)
– Eliciting patient information through palpation, auscultation, percussion, and other diagnostic maneuvers

**Intellectual, Conceptual, Integrative, and Quantitative Skills:** Problem solving, the critical skill demanded of pharmacists, requires that the candidate must be able to:

– Measure, calculate, reason, analyze, record, and synthesize large amounts of complex information in a timely manner

– Comprehend three-dimensional relationships and understand spatial relationships

– Remain fully alert and attentive at all times in clinical settings

**Behavioral/Social Attributes:** Candidates must possess the emotional health required for full utilization of their intellectual abilities, the exercise of good judgment, and the prompt completion of all responsibilities attendant to interaction with patients.

– Candidates must possess the ability to develop mature, sensitive, and effective relationships with patients

– Candidates must be able to tolerate physically taxing workloads and to function effectively under stress

– Candidates must be able to adapt to changing environments, to display flexibility and learn to function in the face of uncertainties inherent in the clinical problems of many patients

– Candidates must possess compassion, integrity, concern for others, effective interpersonal skills, willingness and ability to function as an effective team player, interest and motivation to learn

**English Proficiency Requirement**
Every applicant whose native language is not English, or whose undergraduate instruction was not in English, must provide an English proficiency test score. Any applicant whose native language is not English must demonstrate objective competency in English by satisfactory performance on the Test of English as a Foreign Language (TOEFL). A score is considered too old, and will not be accepted, if it is more than two years old from the start of the applicant’s admissions term. Country of citizenship does not exempt applicants from this requirement. Language of instruction at the college or university level, and how recent it has been, are the determining factors in meeting this requirement. The minimum required score for the IBT (Internet Based Testing) is 79 and a minimum score of 26 is required for the speaking component. General writing assistance is available for theses and dissertations; however, as an institution
offering only graduate and professional programs, PCOM does not offer remedial ESL coursework.

Applicants are exempt if:

1. English is the exclusive language of instruction at the undergraduate level; or

2. They have earned a degree from a regionally accredited U.S. college or university not more than five years prior to the anticipated semester of enrollment; or

3. They have completed at least two full-time semesters of graded coursework, exclusive of ESL courses, in a U.S. college or university, or at an institution outside the U.S. where English is the exclusive language of instruction, not more than five years prior to the anticipated semester of enrollment.

**International Applicants**

PCOM is authorized to host F-1 visa students only. At the time of confirmation of acceptance, an international student is required to complete a Certificate of Financial Responsibility form and provide financial documentation. The financial documentation must indicate that the confirmed applicant has sufficient funding for tuition, fees and living expenses for the entire duration of his or her program or a maximum of five years.

It is the sole responsibility of the confirmed applicant to determine if the degree received from PCOM and any licenses obtained from the United States will be acceptable to practice this field in his or her country. PCOM does not guarantee that every international country will allow the practice of the profession for which PCOM's degrees are received and licensing obtained.
ADMISSION TO GRADUATE PROGRAMS

Department of Psychology

The Department of Psychology uses a rolling admissions policy. Therefore, applications will be considered throughout the year as received until the classes have been filled. However, those received prior to March 1 will be given priority. Applications can be submitted online by visiting the APPLY link at www.pcom.edu. The Admissions Committee screens the applications, invites some applicants for an interview, evaluates the applicants and selects the new students. The Admissions Committee reserves the right to accept or reject applications to the chosen program based on merit. Following the completion of the admissions process, each applicant is notified of the Admission Committee's decision in writing, including any conditions that must be satisfied prior to or following enrollment. Prior to enrollment in the Psychology program, matriculated students are required to adhere to departmental technical standards. These can be found on PCOM's website www.pcom.edu. Classes begin for each program as follows:

Doctor of Psychology in Clinical Psychology
– Fall term only

Master of Science in Counseling and Clinical Health Psychology
– Fall term only

Postdoctoral Certificates in Clinical Health Psychology and Clinical Neuropsychology
– Fall term only

Doctor of Psychology in School Psychology
– Summer term only

Educational Specialist Degree in School Psychology
– Fall term only

Master of Science in School Psychology
– Summer term only

Master of Science in Organizational Development and Leadership
– Fall and Spring terms only

Certificate of Advanced Graduate Studies (Psychology)
– Fall, Winter, Spring and Summer terms

Doctor of Psychology in Clinical Psychology (PsyD)
An applicant to the doctor of psychology in clinical psychology program must have successfully completed a master's degree in psychology, social work,
psychiatric/mental health nursing, counseling, school psychology, family therapy or pastoral counseling from a regionally accredited college or university, with a “B” average or better prior to matriculation. Master's degree programs in other specialty areas will be considered on a case-by-case basis.

An applicant’s undergraduate transcripts are used to evaluate the exposure the candidate has had to formal coursework in psychology. An undergraduate GPA of 3.0 or better is required.

In order to ensure that program courses are taught at the highest possible level, applicants must have also completed the following courses prior to admission:

1. Statistics/Research
2. Abnormal Psychology or Psychopathology
3. Theories of Personality
4. Developmental Psychology

The Department of Psychology uses the following information in making decisions concerning admission to the Clinical PsyD program:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Personal and professional qualities as represented by:
   - Three completed reference forms with accompanying letters of recommendation
   - Graded writing sample or professional report or evaluation
   - Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM's Office of Admissions.

Doctor of Psychology in School Psychology (PsyD)
An applicant to the doctor of psychology in school psychology program must have completed a master's degree in school psychology or a related field at a regionally accredited college or university, with a grade point average of 3.0 or better.

Applicants must have completed, prior to admission, all courses required for state certification in school psychology. In addition, it is expected that all candidates will have had the equivalent of at least one 3 credit course in each of the core foundation areas for a degree in psychology as follows: ethics, research,
statistics, psychometric theory, biological bases of behavior, cognitive-affective bases of behavior, social bases of behavior and individual differences. Transcripts will be carefully reviewed by the Admissions Committee and a plan for remediation of any incomplete prerequisite requirements will be developed as a conditional acceptance into the program.

The Department of Psychology uses the following information in making decisions concerning admission to the School PsyD program:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Official score report from PRAXIS II School Psychology Specialty Exam (0401)
4. Personal and professional qualities as represented by:
   - Three completed reference forms with accompanying letters of recommendation
   - Personal interview (at option of Admissions Committee)
   - Writing sample, requested at time of interview
5. Copy of certification as a School Psychologist

All materials must be forwarded to PCOM's Office of Admissions.

Educational Specialist Degree in School Psychology (EdS)
An applicant to the educational specialist degree in school psychology program must have successfully completed a master's degree from a regionally accredited college or university in psychology, counseling, education or a related field with a “B” average or better prior to matriculation.

The Department of Psychology uses the following information in making decisions concerning admission to the EdS program:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Official score report from Graduate Record Examination (GRE) Psychology Test #81
4. Official score report proving successful completion of PRAXIS I (reading, writing, math and listening)
5. Personal and professional qualities represented by:
– Three completed reference forms with accompanying letters of recommendation

– Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM’s Office of Admissions.

**Master of Science in School Psychology (MS)**

An applicant must have successfully completed a bachelor's degree from a regionally accredited college or university in psychology, education or a related field with a “B” average or better prior to matriculation. Applicants must have also successfully completed the following courses prior to admission:

1. 6 credits of English
2. 6 credits of Math
3. Abnormal Psychology/Psychopathology or Exceptional Children
4. Child and/or Adolescent Psychology (not Lifespan Development)
5. 9 credits of Psychology or relevant electives approved by the Admissions Committee to total 15 semester credit hours of preparation for graduate study in school psychology (at least one course must be an intensive writing course in psychology, education, or appropriate concentration area)

The Department of Psychology uses the following information in making decisions concerning admission to the MS program in School Psychology:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Official score report from the General Test of the Graduate Record Examination (GRE) or Miller Analogies Test (MAT)
4. Personal and professional qualities represented by:
   – Three completed reference forms with accompanying letters of recommendation
   – Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM’s Office of Admissions.

**Master of Science in Counseling and Clinical Health Psychology (MS)**

An applicant to the master of science in counseling and clinical health psychology program must have successfully completed a bachelor's degree in psychology, counseling, social work, or education from a regionally accredited
college or university with a “B” average or better prior to matriculation. Bachelor's degrees in other specialty areas will be considered on a case-by-case basis. In order to ensure that program courses are taught at the highest possible level, applicants must have completed, prior to admission, at a bachelor’s level or above, the following courses:

1. Introduction to Psychology
2. Statistics/Research
3. Abnormal Psychology/Psychopathology

The Department of Psychology uses the following information in making decisions concerning admission to the MS program in Counseling and Clinical Health Psychology:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Official score report from the General Test of the Graduate Record Examination (GRE) or Miller Analogies Test (MAT)
4. Personal and professional qualities represented by:
   - Three completed reference forms with accompanying letters of recommendation
   - Personal interview (at option of Admissions Committee)
   - Writing sample, preferably graded

All materials must be forwarded to PCOM's Office of Admissions.

Certificate of Advanced Graduate Studies Program in Psychology (CAGS)

An applicant to the certificate of advanced graduate studies program in psychology must have successfully completed a master's degree in psychology, social work, creative arts therapy, counseling, school psychology, marriage/family therapy or pastoral counseling from a regionally accredited college or university with a “B” average or better prior to matriculation. Master's degrees in other specialty areas will be considered on a case-by-case basis.

The Department of Psychology uses the following information in making decisions concerning admission to the CAGS program:

1. Application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
All materials must be forwarded to PCOM’s Office of Admissions.

**Master of Science in Organizational Development and Leadership (MS)**
An applicant to the master of science in organizational development and leadership program (Philadelphia or Georgia Campus) must have successfully completed a bachelor's degree from a regionally accredited college or university prior to matriculation.

The Department of Psychology uses the following information in making decisions concerning admission to the MS program in Organizational Development and Leadership. Applicants are responsible for ensuring that all admissions materials are completed accurately and submitted on time:

1. Application, including an autobiographical statement and a $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. One letter of recommendation
4. Professional Resume
5. Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM’s Office of Admissions.

**Department of Physician Assistant Studies**

**Master of Science in Health Sciences (MS)**
PCOM's physician assistant studies program is designed to prepare the student for comprehensive practice in a variety of clinical settings following completion of the second year of the program. The goals and objectives of the program are guided by the criteria set forth by the Standards and Guidelines for an Accredited Education Program for the Physician Assistant. The program has received full accreditation from the Accreditation Review Commission on Education for the Physician Assistant (ARC-PA), and graduates are eligible to sit for the National Commission on Certification of Physician Assistants (NCCPA) examination for national certification and regional, local and national licensure. Admission to the master of science program for physician assistant studies is very competitive. Applications will be reviewed by the Department of Physician Assistant Studies when the Central Application Service for Physician Assistants (CASPA) profile, PCOM supplemental application form, $50 fee and supporting credentials are received in PCOM's Office of Admissions. Successful applicants will generally exceed the minimum criteria listed below.
Requirements
It is the responsibility of each applicant to meet the following minimum requirements:

<table>
<thead>
<tr>
<th>SCIENCE AND MATH</th>
<th>CREDIT HOURS</th>
<th>NOTES</th>
</tr>
</thead>
<tbody>
<tr>
<td>General Biology I</td>
<td>4 credits</td>
<td>with labs</td>
</tr>
<tr>
<td>General Biology II</td>
<td>4 credits</td>
<td>with labs</td>
</tr>
<tr>
<td>Other Biology coursework</td>
<td>3 credits</td>
<td>with labs</td>
</tr>
<tr>
<td>Anatomy and Physiology</td>
<td>8 credits</td>
<td>Can be taken as separate courses or combined as Anatomy and Physiology I and II</td>
</tr>
<tr>
<td>Inorganic Chemistry</td>
<td>8 credits</td>
<td>with labs</td>
</tr>
<tr>
<td>Other Chemistry coursework</td>
<td>3 credits</td>
<td>e.g., Biochemistry, Organic Chemistry</td>
</tr>
<tr>
<td>Health Science</td>
<td>3 credits</td>
<td>e.g., Physics, Nutrition, Immunology</td>
</tr>
<tr>
<td>Social Science</td>
<td>9 credits</td>
<td>e.g., Psychology, Sociology</td>
</tr>
<tr>
<td>Math</td>
<td>6 credits</td>
<td>Statistics is acceptable to meet one Math requirement</td>
</tr>
</tbody>
</table>

– Completed all the above prerequisite coursework with a grade of at least either a “C” or 2.0 on a 4.0 scale.

– Obtained a minimum cumulative grade point average of 3.0 or higher on a 4.0 scale (as calculated by CASPA) for all undergraduate coursework completed.

– Documented 200 hours of patient contact experience in volunteerism or employment in the health care industry.

– Completed a baccalaureate degree in a science- or health-related field from a regionally accredited college or university in the United States, Canada or the United Kingdom prior to matriculation.

– Submitted three letters of recommendation, one from a physician, physician assistant or nurse practitioner.

Applicants with graduate degrees and/or five years of health care experience and/or other unique circumstances or qualifications may be considered on an individual basis for waiver of selected published requirements. However, all candidates must have earned a bachelor's degree prior to enrollment, excluding dual degree candidates. Waiving of any criteria can only be assessed during the formal application review.
Applications are not accepted from individuals not eligible to be licensed as a physician assistant under the laws of the Commonwealth of Pennsylvania. At the time of application, candidates must have the prerequisites completed or be able to provide a plan in writing that demonstrates the completion of the prerequisites prior to enrollment in the program. All science and math prerequisites must have been completed within the last ten years.

**Application Process**

The PA program at PCOM participates in the Central Application Service for Physician Assistants (CASPA). CASPA is a Web-based application service that allows applicants to apply online; visit www.caspaonline.org or request a paper application from CASPA. In either case, all application materials must be submitted to CASPA no later than December 1, 2011, along with their required processing fee. CASPA accepts 2011-2012 applications after April 15, 2011. PCOM supplemental applications which will be sent via e-mail to candidates upon receipt of the CASPA application to Admissions, must be received no later than January 15, 2012 along with a $50 application fee. The PA program utilizes a rolling admissions policy; therefore early applicants have the greatest chance of successful admission.

Send official transcripts from all colleges and universities attended directly to CASPA. (Upon matriculation, however, official transcripts must be forwarded directly to PCOM for file completion.)

Three letters of recommendation should be sent to CASPA directly from the recommenders. The letters will be reproduced and forwarded to PCOM.

When all credentials are on file, they will be verified, processed and sent to PCOM. At that time, supplemental applications will be added to the processed CASPA file and the complete application file will be evaluated for admission.

The Admissions Committee reserves the right to accept or reject applications to the chosen program based on merit. Interviews will be offered to those who qualify. Typically, interviews are conducted weekly from September through February. Following completion of the admissions process, applicants will be notified of the Admissions Committee’s decision in writing, including any conditions that must be satisfied prior to or following enrollment. Prior to enrollment in the Physician Assistant Studies program, matriculated students are required to adhere to departmental technical standards. These can be found on PCOM’s website www.pcom.edu.

For questions regarding the CASPA application, assistance is available by e-mailing caspainfo@caspaonline.org or by calling 617-612-2080.
Forensic Medicine

The Forensic Medicine Program use a rolling admissions policy. Therefore, applications will be considered throughout the year as received until the classes have been filled. Applications can be submitted online by visiting the APPLY link at www.pcom.edu. The Admissions Committee screens the applications, invites some applicants for an interview, evaluates the applicants and selects the new students. The Admissions Committee reserves the right to accept or reject applications to the chosen program based on merit. Following completion of the admissions process, applicants will be notified of the Admissions Committee's decision in writing, including any conditions that must be satisfied prior to or following enrollment. Prior to enrollment in the Forensic Medicine Program, matriculated students are required to satisfy departmental technical standards. These can be found on PCOM's website www.pcom.edu. Classes begin for each program as follows:

Pathway – Summer term only
Master of Science in Forensic Medicine – Fall term only

Pathway Program
Applicants to the Pathway program in forensic medicine must meet the following requirements:

1. Application, including autobiographical statement and $50 application fee
2. Successful completion of a bachelor's degree from a regionally accredited college or university with a cumulative grade point average of 3.0 or higher on a 4.0 scale prior to matriculation. The bachelor's degree must be completed before the start of Pathway in May.
3. Official transcripts from all undergraduate and graduate work
4. One completed reference form with accompanying letter of recommendation
5. Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM's Office of Admissions.

Master of Science in Forensic Medicine (MS)
Applicants to the Master of Science in Forensic Medicine program must meet the following requirements:

1. Application, including autobiographical statement and $50 application fee
2. Successful completion of a bachelor of science degree in a life science discipline from a regionally accredited college or university with a cumulative grade point average of 3.0 or higher on a 4.0 scale prior to matriculation.
Coursework must include the following with a grade of “C” or better:

- Biology I and II (with labs)
- Chemistry I and II (with labs)
- Anatomy and Physiology I and II (with labs)

Candidates who have not completed the aforementioned coursework must apply for admission through the Pathway program.

3. Official transcripts of all undergraduate and graduate work
4. One completed reference form with accompanying letter of recommendation
5. Personal interview (at option of Admissions Committee)

All materials must be forwarded to PCOM's Office of Admissions.

**Biomedical Sciences**

The graduate program in biomedical sciences uses a rolling admissions policy. Therefore, applications will be considered throughout the year as received until the classes have been filled. Each campus (Philadelphia and Georgia) has a separate application for the biomedical sciences program. Applications can be submitted online by visiting the APPLY link at www.pcom.edu. The Admissions Committee reserves the right to accept or reject applications to the chosen program based on merit. Following the completion of the admissions process, each applicant is notified of the Admission Committee's decision in writing, including any conditions that must be satisfied prior to or following enrollment. Prior to enrollment in the Biomedical Sciences program, matriculated students are required to adhere to departmental technical standards. These can be found on PCOM's website www.pcom.edu. Classes begin in the fall term; however, candidates may, in some cases, also be permitted to begin classes in the winter or spring terms.

Applicants for admission to the graduate program in biomedical sciences must meet the following requirements:

1. Successfully complete a bachelor's degree from a regionally accredited college or university prior to matriculation
2. Complete all undergraduate pre-professional science requirements
3. Show evidence of commitment to a career in the health professions and potential for admission to a professional school
4. Provide official score report from one of the following standardized tests: MCAT, DAT, OAT, GRE or PCAT

The following materials must be submitted for admission consideration:

1. A completed application, including autobiographical statement and $50 application fee
2. Official transcripts of all undergraduate and graduate work
3. Official reports of standardized test scores
4. One letter of recommendation from the pre-professional advisor/committee or a science faculty member of the applicant's undergraduate institution

All materials must be forwarded to PCOM's Office of Admissions at the campus (Philadelphia or Georgia) where acceptance is being requested.

The admissions process of the certificate in biomedical sciences program is not related in any way to the admissions process of the doctor of osteopathic medicine program on either campus or to the Physician Assistant Studies program.

**Master of Science in Biomedical Sciences (MS)**

Application for degree candidacy and selection of concentration begins after the second academic term of the foundation course year. Applicants with satisfactory academic performance will be scheduled for a personal interview for admission to candidacy for the master of science degree in biomedical sciences.

The admissions process of the degree program in biomedical sciences (MS) is not related in any way to the admissions process of the doctor of osteopathic medicine program on either campus or to the Physician Assistant Studies program.

To request additional information about any of the Philadelphia Campus graduate programs, please contact:

Office of Admissions
Philadelphia College of Osteopathic Medicine
4170 City Avenue
Philadelphia, PA 19131
800-999-6998 or 215-871-6700
215-871-6719 (fax)
gradadmissions@pcom.edu
www.pcom.edu
To request additional information about any of the Georgia Campus graduate programs, please contact:

Office of Admissions
Georgia Campus – Philadelphia College of Osteopathic Medicine
625 Old Peachtree Road NW
Suwanee, GA 30024
800-282-4544 or 678-225-7531
678-225-7509 (fax)
GAAdmissions@pcom.edu
www.pcom.edu

Criminal Background Checks
PCOM requires all graduate students to complete a criminal background check prior to matriculation. Students, except PharmD, must have their criminal background checks processed through PreCheck, an organization specializing in criminal background investigation, and PharmD students use Gertiphile through PharmCAS. The Admissions Office must have this documentation on file prior to orientation; students will not be allowed to start classes without this information.

English Proficiency Requirement
Every applicant whose native language is not English, or whose undergraduate instruction was not in English, must provide an English proficiency test score. Any applicant whose native language is not English must demonstrate objective competency in English by satisfactory performance on the Test of English as a Foreign Language (TOEFL). A score is considered too old, and will not be accepted, if it is more than two years old from the start of the applicant’s admissions term. Country of citizenship does not exempt applicants from this requirement. Language of instruction at the college or university level, and how recent it has been, are the determining factors in meeting this requirement. The minimum required score for the IBT (Internet Based Testing) is 79 and a minimum score of 26 is required for the speaking component. General writing assistance is available for theses and dissertations; however, as an institution offering only graduate and professional programs, PCOM does not offer remedial ESL coursework.

Applicants are exempt if:

1. English is the exclusive language of instruction at the undergraduate level; or

2. They have earned a degree from a regionally accredited U.S. college or university not more than five years prior to the anticipated semester of enrollment; or

3. They have completed at least two full-time semesters of graded coursework, exclusive of ESL courses, in a U.S. college or university, or at an institution outside the U.S. where English is the exclusive language of instruction, not more than five years prior to the anticipated semester of enrollment.
International Applicants
PCOM is authorized to host F-1 visa students only. At the time of confirmation of acceptance, an international student is required to complete a Certificate of Financial Responsibility form and provide financial documentation. The financial documentation must indicate that the confirmed applicant has sufficient funding for tuition, fees and living expenses for the entire duration of his or her program or a maximum of five years.

It is the sole responsibility of the confirmed applicant to determine if the degree received from PCOM and any licenses obtained from the United States will be acceptable to practice this field in his or her country. PCOM does not guarantee that every international country will allow the practice of the profession for which PCOM’s degrees are received and licensing obtained.
STUDENT LIFE

In addition to the dedication to their professional development, PCOM students are actively engaged members of the “life” of the campus. Developing leadership skills and human understanding are integral to becoming a well-rounded and compassionate professional. PCOM has a very active student government program, which includes more than 50 professional student organizations. Students gain leadership experience within their class as well as by participating in community outreach programs, athletics and the arts.

Student Government Association
The Student Government Association (SGA) is composed of elected representatives from each class and graduate/professional degree program. There is a Philadelphia Campus SGA and a Georgia Campus SGA, which collaborate on issues of importance to the entire PCOM student body. The SGA directs activities for the student body and speaks for students to the College administration. The SGA presidents on both campuses are elected by the student body, and the executive officers are drawn from representatives elected by each degree program. SGA is very active in defining standards for professionalism among PCOM’s students. SGA meetings are held monthly.

Students are involved in College governance, serving on every major College committee and working with faculty to evaluate courses. Students also participate in accreditation evaluations conducted by national and professional accreditation agencies.

Professional and Social Societies
Professional interests at PCOM are expressed through a variety of clubs and organizations, including the Student Osteopathic Medical Association and the Science in Medicine Club, as well as chapters of the American Academy of Osteopathy, the American College of Family Practitioners, the American Osteopathic Academy of Sports Medicine and the Sigma Xi National Research Society. Physician Assistant, Biomedical Sciences and Psychology students also have sponsored groups within their areas of professional interest and publish their own newsletters.

Multicultural Affairs
PCOM is committed to maintaining an environment that promotes the well being of all students, and to providing opportunities to celebrate the commonalities and differences among cultures. Full-time PCOM student affairs staff members serve as advisors to the various organizations and clubs on multicultural issues. There are a variety of student organizations on both campuses with culture-focused missions. These include the Student National Medical Association (SNMA), CAPS (Culturally Aware Psychology Students), the Asian-Pacific-American Medical Student Association and the Student Initiative for Cultural Competency.
PCOM’s commitment to multicultural sensitivity goes beyond the classroom and the campus. The many initiatives undertaken annually include conferences for minority undergraduate students, hosting of regional meetings of professional societies, and an awards banquet honoring the contributions of minority physicians, hosted by the SNMA.

Career Services
The Office of Student Affairs coordinates career planning support for all PCOM students. This includes individual guidance on writing a curriculum vitae and resume, support for the career search process and mock interview workshops.

Athletic Programs
PCOM provides facilities for students to maintain their physical fitness, as well as their involvement in social and competitive athletics. The activity centers on both campuses feature well-equipped fitness centers, weight training rooms, stationary bikes, aerobics studios and game rooms.

The organized athletic clubs vary by campus, but the College has fielded teams in men’s and women’s rugby, soccer and volleyball. The teams compete in regional professional school leagues. Intramural volleyball, softball, basketball, deck hockey and roller hockey are also available. Organized classes in aerobics, kickboxing, Tai Chi, yoga, nutrition, indoor cycling, mat Pilates and functional medicine ball training are also well attended by students and staff alike. Runners and walkers regularly participate in regional and city-sponsored events in both Atlanta and Philadelphia, and in Philadelphia rowers have become involved with the clubs that scull on the Schuylkill River.

Health Insurance
All PCOM students are required to have health insurance coverage. Students are eligible to enroll in PCOM’s group health insurance plan. Insurance coverage for the student’s spouse and dependent children (under age 19) is also available through the College group at the student's expense. There is a limited open enrollment period of one month for Personal Choice (usually in July). If a student or family member loses outside coverage due to a “life event” over which he or she has no control, he or she may be added to the PCOM plan within 30 days of the event. Dental HMO coverage is available for students on a voluntary basis. Open enrollment for the Dental HMO occurs during July, with no option to enroll or cancel at any later time until the next open enrollment month. Policies renew every year the student is still matriculated, unless canceled prior to the anniversary date. If a student chooses to elect his or her own plan, proof of coverage by a comparable insurance company must be submitted.

The PCOM Student Wellness Center maintains student health records, including the forms for the mandatory physical. Students are advised that routine and preventive health care would be best addressed by having a local personal primary care physician. If a student elects to utilize a PCOM medical practice, fees for consultations, lab work or diagnostic testing are submitted to the
student’s health insurance for consideration for payment. Charges that exceed the payment made by the insurance, or denied payment, are left to the discretion of the individual provider for collection.

**Student Housing**
The College does not provide student housing on or off campus at either of its campuses. However, the Office of Student Affairs serves as an informal resource by providing a channel on the student Web site (Nucleus) that enables students to post for roommates and available housing. Links to popular housing Web sites and area newspapers are also posted on the Nucleus housing channel.

Apartment complexes in the Philadelphia and Atlanta areas update their rental fees each spring, and lists are mailed to accepted students. Apartment complexes are also listed on the PCOM Web site (under “Student Life,” then “Housing”). The College does not involve itself in student lease arrangements or student-landlord disputes and does not screen housing listings for accuracy. It is specified in listings that landlords are expected to comply with the Federal Fair Housing Act.

**Policy of Fairness and Equal Opportunity**
PCOM subscribes to the principles and the laws of the Commonwealth of Pennsylvania, State of Georgia and the federal government pertaining to civil rights and equal opportunity, including Title IX of the 1972 Education Amendments and Section 504 of the Rehabilitation Act of 1973.

PCOM prohibits discrimination on the basis of age, race, color, gender, national origin, ancestry, sexual orientation, religion, creed, disability, marital status or any other legally protected status. This policy applies in recruitment and admission of students, employment of faculty and staff, and scholarship and loan programs. This policy is also followed in the operation of all other programs, activities and services of the College.

Evidence of practices inconsistent with this policy should be reported to the director of human resources, who is the designated coordinator of PCOM’s nondiscrimination program. Inquiries regarding compliance with the sex discrimination provisions of Title IX may also be directed to the assistant secretary for civil rights, Department of Education, Washington, D.C. At the state level, one can contact the Pennsylvania Human Relations Commission, Harrisburg, Pennsylvania, or the Georgia Commission on Equal Opportunity, Atlanta, Georgia.

**Americans with Disabilities Act**
Reasonable accommodation for physical and/or learning disabilities in alignment with the Americans with Disabilities Act (ADA) guidelines will be made when complete supporting documentation has been presented. In determining what constitutes a reasonable accommodation, the College will consider the requirements of the requested accommodation and the impact on the educational program.
PCOM will evaluate each accommodation request on an individual basis. Once accepted for admission, and prior to matriculation, students must take the responsibility for providing appropriate documentation of their need for accommodation. The documentation must clearly identify the disability and provide specific information on the manifestations of the disability and any accommodations needed to remediate those manifestations. Documentation must strictly adhere to the Guidelines for Requesting a Disability Accommodation. To request further information on the ADA, please contact the assistant dean of student affairs.

**Family Educational Rights and Privacy Act (FERPA)**

The Family Educational Rights and Privacy Act of 1974 (FERPA) places certain limitations on the disclosure of personally identifiable student information maintained by PCOM with respect to students; limits access to academic records; and gives students certain rights with respect to educational records, including the right to access, the right to obtain copies, the right to seek correction of such records through informal and formal internal procedures, and the right to place a statement in such educational records explaining any information that they believe to be inaccurate or misleading.

Complaints regarding alleged violations of rights accorded students by the Family Educational Rights and Privacy Act or the regulations promulgated thereunder may be directed in writing to:

Family Educational Rights and Privacy Act Office  
Department of Education  
Room 4511, Switzer Building  
400 Maryland Avenue, SW  
Washington, D.C. 20202  
For more information, visit www.ed.gov/offices/OM/FPco/index.html.

**Directory Information**

PCOM considers certain information to be “directory information” under the Family Educational Rights and Privacy Act and, therefore, subject to disclosure without prior consent of the student. Unless written objection is received by the registrar, the College will treat the following as directory information to be released at the discretion of the Registrar’s Office: student name, address, telephone number, e-mail address, date and place of birth, dates of attendance, major field of study, degrees and awards received and names of undergraduate and/or graduate schools attended, internships and residencies.

**Access to Student’s Record**

Access to a student’s record may be granted to school officials determined to have a legitimate educational interest. The custodian of the records must determine the legitimacy of each request.

A school official is determined to have a legitimate educational interest if the
information requested is required for that official to:

– Perform appropriate tasks that are specified in his/her position/description or contract/agreement

– Perform a task related to the student’s education

– Perform a task related to the discipline of a student

– Provide a service or benefit relating to the student or student’s family such as health care, counseling, job placement or financial aid

The school official is not authorized to share this information with a third party without the student’s written permission. Such information, when it has fulfilled its original purpose, should be returned to the originating office. All other access to a student’s record is granted in accordance with the Family Educational Rights and Privacy Act.

**Maintenance of Student Records**

There is one admissions file for each applicant per program for which he or she applies. This file is kept in the Office of Admissions.

When the student matriculates, the Office of Admissions will forward the following materials to the Office of the Registrar and, all other materials in the applicant file will be purged in accordance with the Family Educational Rights and Privacy Act of 1974, as amended. A student can request to review the information in his or her file with a ten day written notice to the Office of the Registrar.

Information retained in the file is as follows:

– Current application
– AACOMAS profile (DO students)
– CASPA profile (PA students)
– PHARMCAS profile (PharmD students)
– Transcripts
– Standardized test scores (i.e., MCAT, GRE, MAT)
– Letters of acceptance and prepayment
– Completed Technical Standards form
– Previous applications and decision-related correspondence
– Criminal background check

Other data accrued during the student’s tenure at the College including, but not limited to, transcripts, board scores, academic status letters (e.g., probation, warning, dismissal), course related forms (e.g., withdrawal), name change, and change of status documentation will be placed in the student’s file.
Transcripts or grade reports from other institutions, criminal background check, copies of scores from national tests (MCAT, National Board, PRAXIS, etc.) and/or any other third party material will not be released by PCOM. Students must contact the institution that issued these documents to obtain copies.

**Complaints Regarding Non-Compliance with AOA Accreditation Standards**

PCOM is committed to meeting and exceeding the standards for accreditation of colleges of osteopathic medicine as described by the American Osteopathic Association Commission on Osteopathic College Accreditation. A copy of the standards is available upon request from the Office of the Provost. Students in the doctor of osteopathic medicine program who believe that the College may not be in compliance with a standard of accreditation have the right to file a complaint through the following procedure:

1. A written, dated and signed complaint must be filed with the Office of Student Affairs at the Philadelphia and/or Georgia Campus.

2. Student Affairs will consult with the senior vice president for academic affairs and dean and form an ad hoc committee of faculty and students to investigate the complaint.

3. The results of the investigation shall include findings of fact, a determination of standard compliance or non-compliance, and recommended corrective actions. The results will be communicated in writing to the Provost, Student Affairs and the student complainant.

4. If corrective action is indicated, the dean will respond with a description/plan for such action within 30 days of receipt of the ad hoc committee results.

5. Records of all proceedings regarding complaints will be maintained by the Office of Student Affairs.

6. In the event that the student complainant is not satisfied with the ad hoc committee determination and/or corrective action, the student may communicate his/her complaint to:

   Chairperson, Commission on Osteopathic College Accreditation  
   American Osteopathic Association  
   142 East Ontario Street  
   Chicago, IL 60611-2864

**Statement on Substance Abuse**

The College recognizes the importance of assisting students in their development of a lifestyle free from the use of illegal substances and the abuse of alcohol. The College disciplinary policy provides actions including permanent dismissal of students who engage in alcohol abuse, and the use, sale or distribution of illegal substances. The dean may require psychological assessment or toxicological
(urine) testing of any student suspected of substance abuse. Details of the legal sanctions under applicable federal, state and local alcohol and drug laws, and the Pennsylvania and Georgia vehicle codes and Pharmacy Acts are available in the Offices of the Provost and Student Affairs.

**AOA Code of Ethics**

The codes of ethics of various professional associations have been adopted, as appropriate, as guidelines for PCOM professional degree and graduate students.

The American Osteopathic Association, the American Academy of Physician Assistants and the American Psychological Association have formulated their codes of ethics to guide members in their professional lives, and the standards are designed to address the health professional's ethical and professional responsibilities to patients, society, others involved in healthcare and self. In addition, some academic programs have developed their own codes of ethics and student conduct. The codes of ethics are reproduced in the student handbooks and/or orientation materials of the respective academic programs at both Philadelphia and Georgia campuses.
ACADEMIC INFORMATION AND POLICIES

PCOM has three academic terms that consist of 13 weeks in each term, followed by a summer session. All courses are defined on the basis of credit hours for which one credit hour is equal to 14 hours of classroom or classroom equivalent instruction, exclusive of final examinations.

Grading Policy
Course coordinators determine the means by which the final grade will be computed, which may include exam scores, written assignments, laboratory exercises, practical examinations, class participation and other means of evaluation. Courses are graded in accordance with the following system:

Doctor of Osteopathic Medicine
Doctor of Osteopathic Medicine program grading structure is on a numeric scale from 0-100 for the first two years with 70 being a passing grade. In the clinical years the grading structure is Honors Pass, High Pass, and Pass.

Doctor of Pharmacy Program
Doctor of Pharmacy program grade point average is based on a 4.0 scale. Doctor of Pharmacy grading structure is as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.0</td>
<td>90 – 100</td>
</tr>
<tr>
<td>B</td>
<td>3.0</td>
<td>80 – less than 90</td>
</tr>
<tr>
<td>C</td>
<td>2.0</td>
<td>70 – less than 80</td>
</tr>
<tr>
<td>D</td>
<td>1.0</td>
<td>65 – less than 70</td>
</tr>
<tr>
<td>F</td>
<td>0.0</td>
<td>less than 65</td>
</tr>
</tbody>
</table>

For letter grade determination, the final percentage earned in the class will be rounded to the nearest whole number. Cumulative GPA will be based upon the grades earned during the first, second and third professional years only.

Pass–Fail Grading: P or F*

P      Pass (does not affect the GPA)
F      Fail (does not affect the GPA; however, it is counted as an “F” for the purpose of academic progression)
I      Incomplete: An incomplete grade must be requested by the student in writing, in advance of the end of the course. If the instructor approves the request, a written agreement is made regarding the work required and the due date. The new grade must be sent to the registrar within six weeks of the last class.

*The Pass–Fail grading policy is only applicable to those courses that are graded on the pass or fail basis. It does not apply to those courses that are graded on the letter grading scale.
W* Withdrawal before the midpoint or midterm of a course: Once a student has taken the midterm or reached midpoint, he/she is not eligible to withdraw unless there are extenuating circumstances and the student is granted permission (does not affect the GPA)

WP Withdrawal after the midpoint of a course while passing (does not affect the GPA)

WF Withdrawal after the midpoint of a course while failing or unauthorized withdrawal

*Due to the sequential nature of the PharmD curriculum, withdrawal from any single course will not be permitted and students must withdraw from all courses in that semester. To guarantee re-admission the following year, students would need to obtain an approved leave of absence. Poor academic performance as outlined in the School of Pharmacy Student Handbook is not seen as rationale for an approved leave of absence. It is strongly advised for any student considering withdrawing to consult with the Associate Dean for Academics and Assessment for more details.

For letter grade determination, the overall class percentage of earned points will be rounded to the nearest whole number. Cumulative GPA will be based upon grades earned during the first, second, and third professional years only.

**Graduate and PsyD Programs**
Graduate and PsyD programs grade point average is based on a 4.0 scale. Graduate and Doctoral programs grading structure is as follows:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Quality Points</th>
<th>Percentage</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>4.00</td>
<td>95 – 100</td>
<td>Superior level of competency</td>
</tr>
<tr>
<td>A-</td>
<td>3.67</td>
<td>90 – 94</td>
<td>Superior level of competency</td>
</tr>
<tr>
<td>B+</td>
<td>3.33</td>
<td>85 – 89</td>
<td>Satisfactory level of competency</td>
</tr>
<tr>
<td>B</td>
<td>3.00</td>
<td>80 – 84</td>
<td>Satisfactory level of competency</td>
</tr>
<tr>
<td>B-</td>
<td>2.67</td>
<td>77 – 79</td>
<td>Marginal level of competency</td>
</tr>
<tr>
<td>C+</td>
<td>2.33</td>
<td>74 – 76</td>
<td>Marginal level of competency</td>
</tr>
<tr>
<td>C</td>
<td>2.00</td>
<td>70 – 73</td>
<td>Marginal level of competency</td>
</tr>
<tr>
<td>F/WF</td>
<td>0.00</td>
<td>0 – 69</td>
<td>Failure to demonstrate a marginal level of competency; “F” does not count towards the total number required for the program.</td>
</tr>
</tbody>
</table>

HP Superior level of competency in practicum seminar

P Satisfactory or marginal level of competency in practicum seminar

S Satisfactory level of progress in dissertation seminar or biomedical research

U Unsatisfactory level of progress in dissertation seminar or biomedical research
Incomplete: An incomplete grade must be requested by the student in writing, in advance of the end of the course. If the instructor approves the student’s request, a written agreement is made regarding the work required and the due date. The new grade must be sent to the registrar within six weeks of the last class. The only exception is for an Independent Study. Students must satisfy incompletes for Assessment I or II or Research I before the end of late registration for Assessment III or Research II to be eligible for enrollment in these courses.

Withdrawal before the midpoint or midterm of a course; once a student has taken the midterm or reached midpoint, he/she is not eligible to withdraw unless there are extenuating circumstances and the student is granted permission.

Withdrawal after the midpoint of a course while passing.

Withdrawal after the midpoint of a course while failing or unauthorized withdrawal.

Audited (no course credit).

Grade Point Average
The grade point average is calculated by dividing the total credits attempted (excluding grades of HP, S, P, WP, I, AU, W) into the sum of the products of points and credits for all courses taken. Only courses taken at PCOM are included in this calculation.

Grade Reports
Grades are available to all students at the end of each term via the Banner Web services in Nucleus. PCOM does not distribute paper mailers.

Dropping of Courses
The deadline to drop a course is the last day of the first week of the term. Students who drop a course by this deadline will receive a 100% tuition refund.

The Doctor of Osteopathic Medicine, the Doctor of Pharmacy and the Physician Assistant programs are lockstep programs. Students enrolled in these programs cannot request to be dropped from just one class. Dropping one course will require a complete drop for the term. Students are required to take all courses specific to their year. It is required that if circumstances warrant a drop from the term, the student must consult with the dean for approval.
It is also recommended that graduate program students consult with their program director prior to dropping a course.

Withdrawal from Courses
Students in the Doctor of Osteopathic Medicine, the Doctor of Pharmacy and the Physician Assistant programs may not withdraw from a single class. Students in these programs must withdraw from all courses in that term. Due to the sequential nature of the courses students may be required to take a leave of absence until the following year to continue in their program.

Students in graduate and PsyD programs may request a withdrawal from a course up to the midpoint of a course and will earn a grade notation of Withdraw (W). After the midterm or the midpoint of the course, students will not be eligible to withdraw from a course unless there are extenuating circumstances and they are given permission from the program director. The latter option will be reserved for extreme circumstances only. In the case of such course withdrawals approved after the midpoint of the course, a grade notation of WP or WF will be made by the course director, depending on the student's status in the course to that date. Students may not continue in the program with more than one WF grade notation. Withdrawal grades or credits are not calculated in the grade point average.

Auditing Courses
For a student to audit a course, he/she must receive permission from the program director or the dean. An audit of a course does not provide the student with any course credit.

Veteran Information
Contact with the Veterans Administration and negotiation of problems related to veterans benefits are handled in the Registrar's Office. Application for benefits at PCOM is generally initiated by filing a “Change of Place of Training” form upon leaving the undergraduate institution in which the student is enrolled prior to PCOM, or upon separation from the Armed Forces.

International Students Information
International students’ paperwork is processed through the Registrar's Office. PCOM has been approved to process F-1 visas. Prior to the start of their first term, international students must submit a certificate of Financial Responsibility form to the Registrar's Office.

Transfer Credit
The Doctor of Osteopathic Medicine program does not routinely accept transfer students; however, transfer application may be considered under extenuating circumstances and depending on placement available in the class. Consideration will be given only to a student who is in good standing at an AOA accredited college of osteopathic medicine. If accepted, a transfer student will be given credit for courses successfully passed at the previous college that meet PCOM’s
curriculum requirements. A minimum of two years must be completed at PCOM for a student to be eligible to receive the DO degree.

PCOM School of Pharmacy does not routinely accept transfer students; however, a transfer application may be considered under extenuating circumstances and depending on places available in the class. Consideration will be given only to a student who is in good standing at an ACPE-accredited college or school of pharmacy who is eligible for re-admission to the previously attended college or school. The initial request for transfer must originate from the dean of the college or school of pharmacy from which the student wishes to transfer and must be directed to the dean of the PCOM School of Pharmacy – Georgia Campus. Application materials must be submitted and a formal interview with the Admissions Committee will be required. If accepted, a transfer student will be given credit for courses successfully passed at the previous college that meet PCOM's curriculum requirements. A minimum of two years must be completed at PCOM for a student to be eligible to receive the PharmD degree.

Graduate programs may permit transfer credits provided the student meets PCOM's curriculum requirements and upon approval of the academic department. A graduate student will be given permission to transfer to PCOM no more than six graduate level credits for coursework successfully completed at a previous college.

Doctoral-level students are not permitted to transfer any prior coursework to PCOM.

Attendance Policy
Students are expected to attend all classes to maximize their educational experience by participating in and following their discussions first-hand. Individual course directors may set attendance standards for their course, including the designation of mandatory lectures, and may implement in-class quizzes or record attendance. Thus, attendance may be a factor in determining the final grade in a course, at the discretion of the course director.

One-hundred percent attendance is required in clinical clerkships, remedial assignments, laboratory sessions, small-group sessions, clinical correlations and standardized patient exercises, and all introductory and advanced pharmacy practical experiences.

Serious excuses for missed attendance, which must be documented, should be reported to the assistant dean of student affairs for first and second year DO students or to clinical education for third and fourth year DO students, who in turn will advise the course or clerkship director for his or her consideration. Students in other degree programs should report and document their absence to the head of their program. Final determination to accept an excuse remains with the course or clerkship director.
Extended absences for illness, family emergencies, etc., must always be documented by the assistant dean of student affairs, clinical education, or the office of the specific academic program.

**Satisfactory Academic Progress**
Student scholastic achievement is reviewed on an ongoing basis by the Student Academic Policy and Progress Committee.

In the Doctor of Osteopathic medicine program, the committee determines the extent of a student’s academic deficiency by considering the accumulation of academic standing units. Each course block or clinical clerkship is equal to one academic standing unit. Eligibility for promotion to the next class is determined at the end of each academic year; however, students with unsatisfactory academic performance may be counseled to withdraw from the program prior to the end of the academic year.

A student with a failure in one academic standing unit will be recommended by the Student Academic Policy and Progress Committee to the dean for promotion from one class to the next when the student has removed the single deficiency through remedial examination. A student with course failures in excess of one academic standing unit is not eligible for remedial examination and is not eligible for advancement to the next year of study. A student with course failures in excess of one academic standing unit in any academic year may be dismissed from the academic program of the College or required to repeat a year of study, at the discretion of the Faculty Committee on Academic Policy and Promotion.

In the Doctor of Pharmacy program, a student must receive a minimum cumulative grade point average of 2.0 to graduate. The minimum grade required to pass pharmacy coursework is a “D.”

The School of Pharmacy Academic Performance and Standards Committee reviews all student academic progression. When a student violates the progression guidelines, the Academic Performance and Standards Committee evaluates the case and submits a recommendation letter to the Student Policy and Progress Committee. This Committee reviews the case and reports its decision to the School of Pharmacy dean, who generates the appropriate decision letter.

The committee determines the extent of academic deficiency by considering specific academic guidelines. Numerous parameters exist which help to maintain proper alignment of academic expectations while describing consequences of failure to achieve these requirements. The progression guidelines also define academic probation, dismissal criteria and steps which must be undertaken to graduate from the pharmacy program.

A student in the Doctor of Pharmacy program who has failed a course must remediate the class during the following summer. The grade earned through remediation will be averaged with the original “F” for calculation of the final
GPA. Only one course may be remediated. Students may not progress to the next academic year until remediated coursework is successfully completed. For purposes of this policy, an “F” in a pass-fail course is treated as an “F” with regard to overall academic progression and thus must be repeated.

Dismissal from the Doctor of Pharmacy program occurs if a student receives:

1. Five grades less than “C” for all coursework including experiential education during the pharmacy program or

2. Three grades of “F” for all coursework including experiential education during their academic career or

3. Fail the same course twice including all remediated coursework or

4. If a student’s semester or cumulative GPA remains below 2.0 at the end of the probationary semester or

5. If a student earns two grades of “F” (including “WF”) during a single professional year, he/she will be reviewed by the Academic Performance and Standards Committee for an assessment of options which includes re-taking the entire year or dismissal from the pharmacy program.

Academic Probation
Students are placed on academic probation under two circumstances: (1) their semester or cumulative GPA is less than 2.0 at the end of any semester, or (2) they receive a course grade of “F” or “WF” in any professional year. The duration of the probationary period and requirements for removal from probation differs between the two circumstances.

Academic Probation When the Semester or Cumulative GPA Is Less than 2.0
If a student is placed on academic probation as a result of his or her semester or cumulative GPA dropping below 2.0, then the probationary period is the following semester. At the end of the probationary period, the student must have a semester and cumulative GPA of 2.0 or better.

Failure to do so will result in the student being reviewed by the School of Pharmacy Academic Performance and Standards Committee for consideration of the following options, including but not limited to (1) recommendation for dismissal from the program, (2) repeat of the current professional year.

The minimum GPA required to graduate from PCOM is 2.0; therefore, if the cumulative GPA is less than 2.0 at the end of the third professional year the student will not be allowed to progress into the fourth professional year. The student will be reviewed by the School of Pharmacy Academic Performance and Standards Committee for consideration of the following options, including but not limited to (1) recommendation for dismissal from the program, (2) repeat of
the third professional year. If the Committee allows a repeat of the third academic year and the cumulative GPA remains below 2.0, the student will be dismissed from the program.

**Academic Probation with a Course Grade of “F” or “WF”**

A student who receives a single course grade of “F” or “WF” with a cumulative GPA less than 2.0 is placed on probation until the course is successfully remediated. Failure to successfully remediate the course results in dismissal from the program.

Failed Experiential Rotations must be repeated at a date and time as determined at the discretion of the Director of Experiential Education. If a student receives two course grades of “F” or “WF” within any professional year, then the student is referred to the School of Pharmacy Academic Performance and Standards Committee for consideration of the following options, including but not limited to (1) recommendation for dismissal from the program, (2) repeat the professional year or (3) remediation.

If a student is allowed by the School of Pharmacy Academic Performance and Standards Committee to repeat the professional year (as determined by the curriculum) then the probationary period is his or her repeat year. The student is removed from probation after successful completion of the probationary year.

Any student on probation for two or more of the previously stated reasons will automatically be referred to the School of Pharmacy Academic Performance and Standards Committee for review for consideration of the following options, including but not limited to (1) recommendation for dismissal, (2) repeat of the professional year.

Successful removal from academic probation is achieved when the semester and cumulative GPA is $\geq 2.0$ at the end of the probationary semester. The student also is removed from academic probation during a repeated year when his/her semester and cumulative GPA $\geq 2.0$.

In the graduate programs, a grade of “F” (failure) in any graduate course will make the student liable for dismissal from the program. A minimum cumulative grade point average of 3.0 is required for continuation to unconditional degree candidacy status, and conferral of the master of science degree.

Doctoral students must achieve a “B” average (3.0) or higher to take comprehensive exams and to graduate from the program. PsyD students may earn no more than two grades below a “B-” or more than one “F” in any course, required or elective. In addition, students must record a “B-” or better in all required courses.

Each degree program also has specific requirements regarding comprehensive examinations, licensure exam passage, practicum, internship and thesis and dissertation completion. These policies are explained in detail in the student
handbook for the respective program.

**Categories of Academic Standing**
The categories of academic standing are as follows:

**Good Standing**: Status of a student who has met course requirements in a satisfactory manner and has demonstrated professional behavior.

**Probation**: Status of a student who has demonstrated a marginal level of performance to the degree that any additional course deficiencies will make the student liable for dismissal according to College policy.

**Dismissal**: Action, after review of the academic deficiency or deficiencies of a student by the Faculty Committee on Academic Policy and Promotion, whereby a student may be dismissed from the academic program of the College.

**Academic Appeal**
A student who is dismissed for academic deficiency may appeal the decision. Such a request or appeal must be made to the Office of Academic Affairs within fifteen business days after the student has been notified of the decision to dismiss.

Students may not bring before the Faculty Committee on Academic Appeals requests other than an appeal of a permanent dismissal action. Any student appealing a dismissal will be entitled to a hearing before the Faculty Committee on Academic Appeals. The scope of the review shall not include a review of the components of a specific grade or grades.

At the hearing, the student may present evidence on his or her behalf, and/or choose to be represented by an advisor or an attorney. The student must also provide a list of any witnesses he or she plans to call on his or her behalf and/or the use of an attorney or other advisor at least ten days prior to the hearing. The student shall be given written notification of the final decision.

**Change of Enrollment Status**

**Leave of Absence**: A leave of absence is defined as a pre-approved leave from the institution that suspends a student's course of academic and/or clinical study or off-site training for a definite period of time, not to exceed 12 months.

A leave of absence may be granted for one of the following reasons: (1) a medical or family emergency; (2) a financial emergency; (3) pursuit of an academic endeavor other than the regular classroom work or training assignment, either on campus or at another recognized teaching facility; (4) active military service.

Only the Provost can grant a leave of absence. To receive consideration for a leave of absence, a student must submit to the Provost a written request explaining the time requested and the basis for the leave of absence. The student, in consultation with the Provost, should consider how a leave would affect his or
her overall progress in the academic program of the College. The Provost reaches
a decision after careful consideration is given to personal and professional
circumstances. All applications for leave of absence are considered on their
individual merits and approved only for extraordinary reasons.

When an approved leave or formal withdrawal is granted before the midpoint of
a course, the course(s) in progress at that time will be recorded on the transcript
with the grade “W”; if an approved leave is granted after the midpoint of a
course, the grade recorded on the transcript will reflect the grade status at that
part of the term (“WP” if passing; “WF” if failing). Students who permanently
withdraw from the academic program of the College without following the
withdrawal procedure will receive the grade “F” for courses in progress. In the
case of courses repeated in their entirety, the new grade earned will be recorded
in the term the repeated course is completed. This new grade will be calculated
in the grade point average, however, this will not remove the previous “W”, “WP,”
or “F” for that course from the transcript.

Before the conclusion of the leave of absence, the student must notify the Provost
and the registrar in writing of his or her intent to register and resume his or her
degree program. If a leave of absence is due to personal illness, the student’s
attending physician or other health care provider as specified by the Provost must
supply a letter attesting to the student’s ability to continue in the academic or clinical
program, or other training activity. The student’s course of study will then be
resumed at the point in the curriculum deemed most appropriate by the Provost.

A student on leave of absence is not considered enrolled during the term of the
leave and does not qualify for loan deferment, special monetary loans, grants or
other special considerations that presuppose the status of a regular student.
Therefore, students are advised to consult with the Financial Aid Office regarding
their loan payback and other financial matters throughout their decision process.

Health insurance may be continued if premiums are paid on time. Special
arrangements must be made with Financial Operations for regular payment of
premiums, which is generally monthly during a leave.

A student on a leave of absence who fails to return within the time period
specified in the approved leave of absence will be dropped as a student from the
College. Any student who is dropped must reapply for admission.

A student on financial leave must satisfy his or her account with the bursar as
stipulated in Payment of Tuition and Fees section before petitioning for
re-admission. Notwithstanding time off for leave(s), all requirements for
graduation from PCOM must be completed within seven years from the first date
of matriculation in the medical and doctoral programs, or within three years for
the master’s programs.

Transferring from PCOM: If a student in the DO program or in any other degree
program desires to transfer to any other institution, the initial contact should be made with the program director or the dean in order to obtain a letter of good standing, if required.

Transcripts may be requested from the registrar and will be released only if the financial account is in good order.

**College Disciplinary Policy and Procedure**

It is not possible to enumerate all forms of behavior both within and outside the College premises and property that would raise serious questions concerning an individual student’s continuing in study at the College and/or in such student’s ability to practice as a professional after graduation, and which would constitute a violation of professional behavior. The following, however, are some examples of behavior that would be unacceptable: violation of any law of the land; dishonesty, such as cheating, or knowingly furnishing false information to the College; breaches of confidentiality in the course of patient care; drug or alcohol abuse; forgery, alteration or misuse of College or training site documents, records or identification; abuse, malicious misuse, damage or destruction of College or training site property; assault or battery, threat of force or violence or any other action or omission that would jeopardize the health or welfare of any member of the College or personnel at a training site, including, without limitation, members of the faculty, administrative or professional staff, students, employees, patients or visitors; abusive or disrespectful conduct towards members of the faculty, administration or professional staff, employees, students, patients or visitors to PCOM; theft of or damage to any property temporarily or permanently located on the College or training premises; obstruction or disruption of teaching, research, patient care or any other College or training activities; unauthorized entry into, occupation of or obstruction of any building or part thereof on the College premises; violation of any other duly established rules and regulations of the College, affiliated hospitals or any affiliated institution. As used in the above examples, the College premises and College property shall include the premises and property of any affiliated institutions or training sites where PCOM students pursue activities for academic credit. Also included is conduct related to participation in any activities under the auspices of the College or its student organizations.

**Forms of Discipline:** Breaches of appropriate professional behavior and violations of College policy will be subject to discipline. Discipline includes, but is not limited to, reprimand, probation, suspension and dismissal.

**Reprimand:** A written admonition to a student for inappropriate behavior that is found to have constituted a relatively minor offense. It may be issued by an administrator or by any member of the faculty of the College. Reprimands are reported to the provost, dean and the assistant dean for student affairs for informational purposes.

**Probation:** A student may be placed on disciplinary probation for not longer than
one academic year. The provisions of this probation will be decided by the Faculty Committee on Discipline. Such provisions may include a requirement that the student obtain medical and/or psychiatric consultation and treatment or other terms designed to remedy the behavior being reviewed and to prevent its recurrence.

**Suspension**: Represents temporary separation from the College. The duration of a suspension shall be determined by the Faculty Committee on Discipline, but shall not exceed one academic year. The Committee may also place conditions on the student’s return to the College. Such conditions may include the student’s need to obtain medical and/or psychiatric consultation and treatment, or other appropriate conditions.

**Dismissal**: Represents permanent separation from the College. Dismissal may be invoked by the Faculty Committee on Discipline and may be imposed with or without the right to reapply for admission to the College at a later date.

Where medical or psychiatric consultation and treatment are recommended or required, the confidentiality of the physician/patient relationship shall be preserved and no report shall be made by the consulting physician to the Faculty Committee on Discipline without the consent of the affected student. However, the Faculty Committee on Discipline may condition a student's ability to continue as a PCOM student upon a satisfactory evaluation by a physician, psychiatrist, or psychologist appointed by the committee.

The process and proceedings are described in the general student handbook.
TUITION AND FEES

The Board of Trustees established the following tuition for the 2011-2012 academic year. Tuition is payable 20 business days before the start of each term. Tuition and a comprehensive fee are subject to change at any time at the discretion of the Board of Trustees. The comprehensive fee is neither returnable nor transferable. Each DO, Pharmacy and PA student is charged an annual comprehensive fee of $725. Each graduate student is charged a per term comprehensive fee as follows: Summer $182, Winter $181, Spring $181, Fall $181.

Doctor of Osteopathic Medicine (DO)
Tuition for the 2011-2012 academic year is $40,812. Students are charged the comprehensive fee as described above.

Accepted applicants are asked to send a $250 non-refundable tuition prepayment according to the schedule listed in the Admissions Decision section of this catalog. An additional deposit of $2,000 is required on April 15 from all confirmed students. This fee is non-refundable and, along with the initial $250 deposit, will be credited to the student’s tuition account.

Doctor of Pharmacy (PharmD)
Tuition for the 2011-2012 academic year is $31,041. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

Doctoral Program in Clinical Psychology and School Psychology (PsyD)
Tuition for the 2011-2012 academic year is $985 per credit. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

Master’s Degree Program in Counseling and Clinical Health Psychology (MS), School Psychology and CAGS
Tuition for the 2011-2012 academic year is $714 per credit for all master’s of psychology students. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be
deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Educational Specialist Degree – Psychology (EdS)**
Tuition for the 2011-2012 academic year is $772 per credit. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Master’s Degree Program in Organizational Development and Leadership (MS) and Certificate Program**
Tuition for the 2011-2012 academic year is $706 per credit. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $150 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Graduate Program in Biomedical Sciences (Certificate and MS)**
Tuition for the 2011-2012 academic year is $751 per credit. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Master’s Degree Program in Health Sciences (Physician Assistant) (MS)**
Tuition for the 2011-2012 academic year is $30,056. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $500 is required to reserve a place in the first year class. This advance payment will be deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Master’s Degree Program in Forensic Medicine (MS) and Pathway Program**
Tuition for the 2011-2012 academic year is $738 per credit for all forensic medicine students. Students are charged the comprehensive fee as described above.

Upon notification of acceptance as a student, an advance payment of $150 is required to reserve a place in the first year class. This advance payment will be
deducted from the tuition payment due on registration day, but is not refundable in case of withdrawal.

**Late Payment**

It is the policy of the College that the payment of tuition and comprehensive fee is due in full at each billing cycle as published in the College calendar. All students who expect to take out loans to meet their obligations must show proof of pending loans sufficient to meet the payment of tuition and fee on the due date.

If tuition is not paid in full on that day, or if proof of adequate pending loans is not furnished, a late fee of $100 per month will be assessed on the outstanding balance until such time as all obligations are met. A check that is not honored by the bank on which it was drawn will be subject to a $50 fee.

Students with outstanding balances from previous terms will not be permitted to register for the next term until all financial obligations are met either by payment in full or by proof of adequate pending loans. If a student is unable to meet his or her outstanding balances, the student will be granted an administrative leave of absence to rectify his or her credit situation.

All prior year balances must be satisfied before a student is permitted to start a new academic year. Balances remaining unpaid at the end of the fourth year or end of degree program will prevent a student from receiving his or her diploma.

In the event that a student receives and accepts a late admission to the first year of study, an exception to the above policy will be considered if the appropriate loan applications are filed immediately with the expectation of making full tuition payment by the end of the first term. This exception is for the first term of the first year only. Any other exceptions to this policy must be discussed with the Director of Financial Operations.

**Tuition Refund Policy**

In case of total withdrawal from a semester, tuition charges will be adjusted according to the institution’s tuition refund policy.

If a student withdraws from classes within seven weeks from the start of the term, a pro-rata refund or tuition credit may be authorized. In the case of full withdrawals, the effective date of withdrawal is the date on which the student filed with the Provost a written notification of withdrawal or a request for a leave of absence. For courses not conducted on a weekly schedule, summer sessions, and clinical clerkships/preceptorships in the Medical and Physician Assistant programs, the refund is prorated according to the percent of the clerkship, preceptorship or course completed as indicated in parentheses below:
Withdrawal During:

<table>
<thead>
<tr>
<th>Term Charge</th>
<th>Refund or Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>First week of class</td>
<td>0%</td>
</tr>
</tbody>
</table>
(up to five percent of instructional time)
| Second week of class | 10% | 90% |
(more than five percent but no more than 10 percent of instructional time)
| Third and fourth weeks of class | 25% | 75% |
(more than 10 percent but no more than 25 percent of instructional time)
| Fifth through seventh weeks of class | 50% | 50% |
(more than 25 percent but no more than 50 percent of instructional time)
| After seventh week of class | 100% | 0% |
(more than 50 percent of instructional time)

Exceptions to this refund policy may be made in certain unusual situations permitting PCOM to return more than the prescribed refund amount. Examples of such situations may include, but are not limited to: academic dismissal where the student was allowed to continue into the next term before a determination about academic status could be made, serious illness, injury obtained while at a clinical rotation, or being called to military service.

No fee or portion of a fee is refundable. The refund policy is subject to change at the discretion of the Board of Trustees, but in no instance will such a change become retroactive.

All federal financial aid funds are credited or returned in compliance with federal regulations as specified in the “Return of Title IV Funds” section (below).

**Financial Aid**

If the student has already received a credit disbursement of financial aid and then withdraws during the refund period, his or her eligibility must be recalculated. If the student received financial aid in excess of the student’s revised eligibility, the student will be required to repay those funds to the College so that the funds can be returned to the appropriate aid programs.

The Financial Aid Office will notify the student of any adjustment to the student’s financial aid award resulting from withdrawal. In addition, the Treatment of Title IV Funds Worksheet will be reviewed at the exit interview. The student may request a copy of the detailed worksheet of the distribution formula from the Financial Aid Office and should contact the Bursar’s Office concerning any balance due.

Federal loans cannot be processed when a student is no longer enrolled on at least a half-time basis. Withdrawing students in receipt of federal program loan funds should contact the Financial Aid Office to schedule exit counseling upon withdrawal.
Return of Title IV Funds
The Financial Aid Office is responsible for recalculating federal financial aid eligibility for students who discontinue enrollment during the term. Upon notification from the office of the Registrar that a student has withdrawn from or dropped all classes, was dismissed, or is approved for a leave of absence, the Financial Aid Office is required to calculate the percentage of the term completed if the student received or was eligible for Title IV financial aid.

If the withdrawal date indicates that the student left the institution prior to completing at least 60% of the enrollment period, the Financial Aid Office must recalculate the eligibility for Title IV funds based on the following formula required by the federal government:

1. Percentage of payment period is the number of days completed to the withdrawal date.

2. The percentage of earned aid is the percentage of the payment period completed, divided by the total number of days in the payment period or term. Breaks of five or more days are not counted as days that are part of the term.

Funds paid by federal student aid programs are returned to the appropriate program based on the percentage of unearned aid as required by the federal government: The aid to be returned is the result of the total amount of aid that could be disbursed minus the percentage of aid earned, multiplied by the total amount of aid that could have been disbursed for the payment period or term.

If a student earned less aid than the amount disbursed, the institution is required to return the unearned portion of funds to the federal program(s). As a result, the student may owe a debit balance to the institution.

The institution must return the amount of Title IV funds for which it is responsible within thirty days of the date of the determination of the student's withdrawal date. Funds are repaid in the following order in accordance with federal regulation:

Unsubsidized Federal Stafford Loans
Subsidized Federal Stafford Loans
Unsubsidized Direct Stafford Loans (other than PLUS Loans)
Subsidized Direct Stafford Loans
Federal Perkins Loans
Federal PLUS Loans
Direct PLUS Loans

If a student earned more aid than was disbursed to the student account, the institution would request a post-withdrawal disbursement which must be paid within 120 days of the student's withdrawal.
FINANCIAL AID

The staff of the Financial Aid Office is committed to providing guidance and information necessary to assist students in meeting their financial needs.

To apply for financial assistance at PCOM, students must complete the Free Application for Federal Student Aid (FAFSA). This form is used to apply for federal student aid, including grants, loans, and federal work-study. It is also used to award need-based institutional funds as well as many private grants and scholarships.

In order to be eligible for financial aid, students must maintain at least half-time enrollment. Enrollment status is determined by the registrar based on the program.

Listed below are the financial aid programs administered by the Financial Aid Office at PCOM.

Loans

Federal Direct Subsidized Loans
A subsidized loan is awarded on the basis of need. Funds are disbursed directly from the US Treasury. Payment is deferred while attending school at least half time or during post enrollment grace periods.

Federal Direct Unsubsidized Loans
An unsubsidized loan is not awarded on the basis of need. The student may pay interest or allow it to accrue while attending school. If interest accrues while the student is in school or during other periods of nonpayment, the interest is capitalized meaning that is added to the principal amount of the loan.

Annual Direct Loan Limits
Under the Federal Direct Loan Program, graduate students can borrow annually up to $20,500 in combined subsidized and unsubsidized loans. Under provisions of the Health Education A Loan, medical students enrolled in a nine month program can borrow up to $40,500; medical students enrolled in a 12 month program can borrow up to $47,167; doctoral students in clinical psychology enrolled in a nine month program can borrow up to $33,000; and doctoral students in clinical psychology enrolled in a 12 month program can borrow up to $37,167. The annual limit includes combined subsidized and unsubsidized Direct Loans. Subsidized Federal Direct Loans cannot exceed $8,500 in any program limit.

Aggregate Direct Loan Limits
The total debt that the student can have outstanding from all Stafford and Direct Loans combined is $138,500 for graduate students and $224,000 for medical
students. The subsidized loans in either program cannot exceed $65,500. Aggregate debt limits include all Stafford or Direct Loans received for undergraduate study.

**Federal Direct Graduate PLUS Loans**
This program provides federally guaranteed loans to graduate and professional students to borrow beyond the Stafford or Direct Loan limits up to the total cost of education. Students who wish to borrow under the Direct Graduate PLUS Loan Program must obtain credit approval. Repayment may be deferred while the student-borrower is attending school on at least a half-time basis.

**Federal Perkins Loan**
This is a federally guaranteed, low-interest, 5% loan administered by PCOM. It is available to medical and graduate students with exceptional financial need. Interest is deferred while the student is in school on at least a half-time basis and during grace periods. Repayment arrangements for the Perkins Loan are made with PCOM's Financial Operations Department.

**Alumni Association Loan**
The Alumni Association of PCOM makes a number of low-interest loans available to third and fourth year medical students in good academic standing who demonstrate financial need. The interest rate is 5%, and repayment begins one year after graduation. Repayment can be deferred during internship and residency.

**Primary Care Loan**
This is a low-cost federal loan program for medical students who are committed to primary care medicine and who demonstrate exceptional financial need. Priority is given to third and fourth year medical students. The Primary Care Loan amount varies depending upon the availability of funds and the financial need of the student; however, the amount does not exceed the annual cost of tuition and fees. The interest rate is 5% and does not accrue during in school or post-education grace periods. Repayment can be deferred during internship and residency, and interest does not accrue during deferment. To be considered for the Primary Care Loan, the student must include parental financial information on the Free Application for Federal Student Aid (FAFSA), submit a signed copy of his/her parents’ federal tax return to the Financial Aid Office, and arrange an interview with a financial aid staff member.

**Scholarships and Grants**

**Institutional Need-based Grants**
Scholarship and grant funds are made possible through institutional resources including Trustee Scholarships and contributions made to the PCOM Foundation. These funds are awarded to students who demonstrate need and are restricted by the availability of funding at the time that the student completes
his/her application for financial aid. A complete financial aid application includes parental data on the Free Application for Federal Student Aid (FAFSA) and submission of a signed copy of parents' federal tax return.

**Institutional Scholarships**
The Faculty Committee on Honors and Awards administers scholarships that are based on academic excellence or other criteria specified by the donor. Candidates who meet the requirements determined by the scholarship donor are reviewed by the committee. In most cases no additional application is required.

**PCOM Yellow Ribbon Grants**
PCOM participates in the Veterans Affairs Chapter 33 matching funds program. Students who are eligible to receive VA Chapter 33 benefits at PCOM may be considered for additional funds from PCOM toward unmet tuition up to $4,000.

**National Health Service Corps**
This is a competitive federal program that awards service-obligated scholarships to students pursuing primary health care training. The scholarship furnishes payment of tuition and required fees, other reasonable costs, and a monthly stipend. In return, for each year or partial year of scholarship support, the student must serve one year in a health professional shortage area. The minimum service commitment is two years.

**Armed Forces Scholarships**
The Army, Navy and Air Force offer competitive scholarships based on academic performance and recommendations. The scholarship provides a monthly stipend, tuition, fees, books and instruments. In return for the scholarship, recipients are obligated to give one year of service for each year of support.

**Private Resources**
Numerous private, city and state agencies sponsor scholarship and loan programs for graduate and medical students. Please refer to PCOM's “A Guide to Financing Your Education” for a description of the financial aid process and a detailed listing of federal, institutional and private sources of grants, scholarships and loans. The financial aid section of PCOM’s Web site is frequently updated and contains valuable financial aid information.

**Federal Work-Study Program**
PCOM participates in the Federal Work-Study Program (FWS). Students who are accepted for enrollment and can demonstrate financial need as determined by the Free Application for Federal Student Aid (FAFSA) “needs analysis” are eligible to participate in jobs on campus upon matriculation at the College.

Applications and information about the work study program are posted on Nucleus for both students and supervisors. The information includes a listing of
approved jobs at the College, ranging from positions in the library and office work to research positions and occasionally assisting in medical offices. Job assignments depend on student experience and availability, and the needs of the supervisors. An FWS award letter must be signed to acknowledge the award and accept the job.

The student’s supervisor takes responsibility for hazardous material notification and strict compliance with OSHA regulations. As specified in the provisions of the Pennsylvania and the Georgia Unemployment Compensation Law, employment of students will not be covered by any program of unemployment compensation.

Students should contact the Office of Student Affairs with any questions related to the work study program.
EDUCATIONAL FACILITIES AND RESOURCES

PCOM maintains its main campus in Philadelphia and a branch campus in the Atlanta, Georgia area. The professional resources of a city rich in medical history, achievements and scientific advances are only 15 minutes from the main PCOM campus on City Avenue. This is the seventh site of a college that graduated its first class of two physicians in 1900. The GA-PCOM campus occupies 19 acres in Suwanee, Gwinnett County, Georgia. State-of-the-art renovations to the 149,885-square-foot building were completed in August 2005.

Student Computer Services
The PCOM network can be accessed via student-owned notebook computers from a variety of study areas across the campuses using a direct connection or wireless access. Wireless access to the PCOM network is available in the cafeteria, library, all computer labs, most classrooms and study areas in both Evans Hall and Rowland Hall and throughout the Georgia Campus. All students are assigned a PCOM network account, portal account and e-mail address. PCOM's portal is named Nucleus and is PCOM's dynamic communication center. Nucleus is personalized for each user and provides personal announcements as well as a calendar function and online groups. The PCOM e-mail address enables students to send and receive electronic mail related to all PCOM activity. E-mail has its own set of credentials (username and password) that are separate from the PCOM network credentials that are used to access network and Nucleus resources. E-mail can be accessed while off-campus by using the Nucleus portal or by direct access through https://pcommail.pcom.edu. Students opting to use single sign-on through the Nucleus portal to their e-mail must have the same password for both their Nucleus and e-mail accounts.

PHILADELPHIA CAMPUS FACILITIES

The City Avenue site provides a true college campus atmosphere for students, unique among urban medical colleges. All facilities are specially equipped for students with disabilities.

Evans Hall
Medical and graduate students receive hundreds of instructional hours in the two amphitheaters in Evans Hall that accommodate 250 and 235 students. The building was dedicated in 1973 in honor of H. Walter Evans, DO, a distinguished professor of obstetrics and gynecology. Both lecture halls have superb audiovisual capabilities, including video and computer presentation equipment, and the teaching system can link to Internet resources. Several classrooms are equipped for full two-way videoconference broadcasts.

The seven levels of Evans Hall also house the College library, Office of the Provost, Student Affairs, Admissions and Clinical Education. Faculty offices throughout the building are combined with laboratories where faculty, graduates and students pursue instruction and research. The Anatomy Laboratory, which
accommodates 250 students simultaneously in the cadaver dissection lab, is recognized as one of the most advanced teaching laboratories in the nation.

The architecture of Evans Hall incorporates the teaching of large classes with the enrichment of student-teacher relationships through the use of small classrooms. Evans Hall is equipped with varied and sophisticated instructional media, exhibit areas and electronic communications equipment. The ground level has a television studio and control booths for the production of instructional video programs. Video monitors are built into the lecture amphitheaters, laboratories and many other teaching areas in the building. The original Evans Hall architecture was enhanced with a three-story addition in 1996. It provides student lounges, study rooms, cafeteria, classrooms, faculty offices, a student computer lab and an osteopathic manipulative medicine teaching center.

**Levin Administration Building**
This elegant stone mansion stands at the center of the 16-acre Moss estate purchased by the College in 1957. It underwent full restoration in 1997.

It now houses the Office of the President, the Office of Alumni Relations and Development and the Office of Marketing and Communications. The Levin Administration Building is named in recognition of the Levin family tradition of pursuing and maintaining the osteopathic heritage, and in honor of Abraham Levin, DO ’35, Jacob M. Levin, DO ’36, Samuel I. Levin, DO ’35, and Joel L. Levin, DO ’69.

**Rowland Hall**
Purchased by the College in 1981, Rowland Hall has a reception area, a Barnes & Noble College Bookstore, and PCOM Printing Services located on the ground floor. Physician offices, administrative offices and academic areas are located throughout this five-level building. Many PCOM students receive clinical instruction in Rowland Hall’s outpatient offices. A state-of-the-art computer lab with an instructor’s station and 15 workstations to support the teaching modalities is located on the fourth floor.

Named in honor of Thomas M. Rowland Jr., a former PCOM president who devoted 34 years of leadership to the College, the building is home to the Psychology Department, Department of Physician Assistant Studies and the Robert Berger, DO, Clinical Learning and Assessment Center. Also housed in Rowland Hall are the following College support services departments:

- Bursar’s Office
- Financial Administration
- Financial Aid
- Graduate Medical Education
- Human Resources
- MIS and Telecommunications
- Plant Operations

---

67
Activities Center
PCOM's Activities Center is a 55,000-square-foot facility available to PCOM students, student spouses and employees. There is no fee for students or PCOM employees. The center includes student lounges and recreation areas, exercise equipment, basketball and racquetball courts, and a rooftop deck suitable for hockey, basketball and shuffleboard. Group exercise classes, including Pilates, yoga, spin and aerobics, are offered throughout the year. The center also includes an NBA regulation-size basketball court that the Philadelphia 76ers share for part of the year as a practice facility. Administrative offices for Sixers staff and a media room are also included as part of the cooperative relationship between the College and the basketball team.

Healthcare Centers
The rural and urban Healthcare Centers sponsored by PCOM offer unique learning opportunities for fourth year osteopathic medical students. At the centers, students learn under direct supervision of attending physicians and become intimately involved in the care of patients. The centers provide cross cultural experiences in underserved, poor, working-class and racially diverse communities. The Healthcare Center experience also enables students to learn the sociology and economics of the health care system by dealing with diverse populations covered by private insurance, HMOs and government medical assistance. The centers are:

PCOM Healthcare Center – City Avenue Division
Harry Morris, DO, Director

PCOM Healthcare Center – Lancaster Avenue Division
Marta Motel, DO, Director

PCOM Healthcare Center – Cambria Division
Barbara Williams-Page, DO, Director

PCOM Healthcare Center – Roxborough Division
David Kuo, DO, Director

PCOM Sullivan County Medical Center
David Wood, DO, Director

In addition to learning at the College-sponsored Healthcare Centers, PCOM students receive clinical instruction at nine affiliated urban sites and twelve affiliated rural community health care centers.
**Affiliated Hospitals**

PCOM utilizes an extensive network of affiliated hospitals to ensure a high standard of education in the clinical education of PCOM’s students. Clinical education programs at PCOM affiliates are guided by common educational goals. The director of clinical education monitors educational activities at the affiliated hospitals. Major teaching affiliates include:

- Abington Memorial Hospital
- Altoona Hospital
- Aria Health
- Atlantic Regional Medical Center
- BayHealth Medical Center
- Beebe Medical Center
- Chestnut Hill Hospital
- Christiana Health Center
- Clarion Hospital
- Community Medical Center
- Conemaugh Memorial Hospital
- Crozer Chester Hospital
- Crozer-Keystone Health System
- Deborah Heart and Lung Hospital
- Doylestown Hospital
- Easton Hospital
- Einstein Northern Division
- Franklin Square Hospital Center
- Friends Hospital
- Geisinger Medical Center
- Heart of Lancaster Hospital
- Jersey Shore University Medical Center
- Kent General Hospital
- Lankenau Hospital
- Latrobe Hospital
- Lehigh Valley Hospital
- Lewistown Hospital
- Meadville Medical Center
- Medical Center of Beaver
- Mercy Catholic Medical Center
- Mercy – Scranton Hospital
- Mercy Suburban Hospital
- Montgomery County Emergency Services
- Muhlenberg Hospital
- Pennsylvania Hospital
- Phoenixville Hospital
- Pinnacle Health System
- Reading Hospital
- Roxborough Memorial Hospital
- Sacred Heart Hospital
O.J. Snyder Memorial Library
The O. J. Snyder Memorial Library provides information resources to support the educational, research and clinical activities of the College. The library utilizes information technologies to expand the scope of local collections to include electronic resources, and to extend access to users at remote locations.

The electronic environment of the PCOM Digital Library includes bibliographic databases and indexes, textbooks, full-text research and clinical journals, catalogs of local, regional and national biomedical collections, and the ever-expanding web of biomedical sites.

The mission of the library is to provide users with access to the widest possible range of information resources and to assist users in acquiring the skills necessary to use these resources effectively.

The library is located on the first and second floors of Evans Hall. It houses the print collections, a reading room for the current journal collection, a conference/group study room, audiovisual room, database center and study space. The database center on the second floor houses over 20 computers and networked printers.

Collections
The PCOM Digital Library provides access to a robust collection of electronic resources including over 11,000 full-text journals, hundreds of e-textbooks, numerous databases, and programs such as clinical simulations and diagnostic decision support programs. Specialized educational resources include streaming videos of Acland's Human Anatomy and Bates Physical Examination tapes, and
3D products like An@tomy.TV and Simbryo embryology simulations.

PCOM has invested in powerful finding tools to facilitate access to electronic resources. OneSearch+ is a powerful search engine that simultaneously searches multiple databases and full-text collections. Journal Locator is a database of all electronic titles that provides holdings information and direct links to individual titles within collections. LinkSource is an external link resolver that is imbedded within PCOM's licensed databases and links across collections to full-text journal articles.

The library provides access to many licensed databases: including MEDLINE, MD Consult, Cochrane Collection of Systematic Reviews, Health and Psychological Instruments, HealthStar and PsycINFO. The Digital Library also facilitates access to unrestricted Internet resources. All electronic resources are available both on campus and from remote locations.

**Services**

The library staff provides instruction, reference, collection development and interlibrary loan services. Recommendations for purchase and requests for services may be transmitted electronically using the forms on the Services and Request Forms Web page. Staff may also be contacted by e-mail at library@pcom.edu.

**Consortia Memberships**

PCOM is a member of the Tri-State College Libraries Cooperative. TCLC consists of 36 academic and special libraries located in Pennsylvania, New Jersey and Delaware. PCOM faculty and students are permitted borrowing privileges at TCLC libraries by presenting a letter of introduction authorized by a PCOM librarian. Please consult the Digital Library information page for a listing of members.

PCOM participates in the Pennsylvania Academic Library Consortium Inc. (PALCI) Web gateway, E-ZBorrow, which allows simultaneous searching of academic library catalogs in Pennsylvania. PCOM library users can directly initiate requests for most items found in PALCI using the LIB# on the PCOM ID card. The library also participates in the National Network of Libraries of Medicine.

**Student Computer Services**

An open-access student computer lab is located adjacent to the Evans Hall student lounge area with more than 46 workstations and several printers. There are an additional 23 workstations and a printer in the library database room on the second floor of the library. Rowland Hall has a computer lab with an instructor's station and 16 workstations located in room 425. Students can access all computer labs with their PCOM ID card. All computers are attached to a Gigabit network. Wireless access to PCOM's network is available in both Evans Hall and Rowland Hall. Wireless printing is available on the first and second
floors of Evans Hall. In addition to common application programs such as Microsoft Office Suite, the software collection includes SPSS, computer-based tutorials in basic science and clinical subjects, including patient case simulations. Students may also access the Internet via the workstations in the computer lab. MEDLINE searches and searches of the shared library system of the Pennsylvania medical schools can be conducted from PC workstations in the computer labs and library.

GEORGIA CAMPUS FACILITIES

GA-PCOM facility is a campus designed with student learning, cutting-edge instructional technology and social interaction in the forefront. The GA-PCOM campus occupies 19 acres in Gwinnett County, Georgia. Renovations to the 149,885-square-foot building were completed in 2005. The facility design includes two architectural main focal points taking advantage of natural light through the use of skylights and partitions.

In addition to large and small classrooms, conference areas and study spaces, instructional space includes a large anatomy laboratory, a patient simulation laboratory, a multi-use basic science laboratory and a large OMM/clinical skills teaching laboratory. With the opening of the School of Pharmacy and anticipating increased enrollments in the osteopathic medical program, additional facilities were completed in June 2010 featuring two large lecture halls, numerous teaching and research labs, faculty offices and a large number of small group rooms for study and interactive learning.

Open circulation areas facilitate social interaction and ease of access to student services, learning resources and instructional spaces. Student facilities also include a central dining hall, student lounge and fitness facility. A central feature of the GA-PCOM campus is the Information Commons, where students have access to both print and electronic media. All primary instructional classrooms at the GA-PCOM facility are wired for Internet connectivity and multi-media presentations.

GA-PCOM Information Commons
The GA-PCOM Information Commons integrates library and student computer lab functions. The Information Commons houses sufficient computers to support extensive use of the electronic resources available through the PCOM Digital Library. The Information Commons is staffed by a librarian, computer specialist, and library assistants working with the main campus library and the MIS Department.

The PCOM Digital Library provides access to a wealth of licensed Internet resources, including over 11,000 full text e-journals, electronic textbooks, bibliographic databases, streaming videos, clinical simulations, diagnostic decision support programs, and evidence-based clinical information systems, as well as subject access to selected Web resources. The Information Commons
houses print reserve and circulating collections. GA-PCOM print holdings are entered into a combined Digital Library Online Catalog. GA-PCOM users may submit borrowing requests electronically for books held in the Philadelphia collection. Print subscriptions to a small number of core journal titles constitute a reading room collection for the Information Commons. The main campus library electronically provides articles from any print-only titles in its collection to GA-PCOM users. All electronic resources in the Digital Library are available to GA-PCOM faculty, staff and students.

COURSES OF MEDICAL STUDY

Doctor of Osteopathic Medicine

Introduction to Osteopathic Medicine
As a philosophy, science and art, osteopathic medicine is a total approach to health and disease. It recognizes that the neuromusculoskeletal system is of major importance to human life. The interrelationship between this and other body systems is a basic part of osteopathic philosophy. An emphasis on primary care, health maintenance, prevention of disease and attention to the neuromusculoskeletal system is key to osteopathic medical education and practice. Universally accepted today, these attributes were considered unorthodox when Dr. Andrew Taylor Still (1828-1917) objected to the crude medications of his time and sought to enhance the body's inherent healing through manipulation.

The osteopathic physician incorporates evaluation and treatment of the musculoskeletal system as a basis for an approach to health and disease, combining it with the diagnostic and therapeutic modalities used by general scientific approaches to the healing arts. Like their MD counterparts, DOs must be licensed in the states where they practice, and additional board certification in specialties further underscores their professional credentials. All 50 states and the District of Columbia provide for the unlimited practice of medicine and surgery by osteopathic physicians. Licensing boards are usually composed of senior members of the osteopathic profession. In some states, MDs and DOs participate in combined licensing boards.

Osteopathic Philosophy
The basic premises accepted by this profession provide the osteopathic physician with a unique way of looking at health and disease. These premises include the following:

1. The human body is a unit in which structure and function are reciprocally interdependent.

2. The body, through a complex system, tends to be self-regulating and self-healing.

3. The adequate function of body systems depends on the unimpeded flow of blood and nerve impulses.

4. The musculoskeletal system is a major body system and its importance exceeds that of mere framework and support.

5. There are musculoskeletal components to disease that are not only manifestations of the disease, but also important contributing and maintaining factors.
The adoption of these basic premises led to the development of the osteopathic total-body concept. The patient is considered ecologically rather than as an isolated unit. Instead of emphasizing the momentary disease state, the osteopathic approach studies and treats the person’s well-being, lifestyle and behavior as a whole.

Through the American Osteopathic Association (AOA), the profession maintains its independence and its own medical schools while cooperating with other branches of medical science. Primary care is emphasized in the educational programs, and a majority of graduates enter primary care fields. However, DOs participate in all specialty and subspecialty areas of current medical practice.

**Educational Goals**
A fundamental educational goal of the College is to prepare students for excellence in the practice of osteopathic medicine. The course of medical study is a practitioner’s program with a strong emphasis on primary care, prevention and osteopathic concepts.

Each osteopathic medical student progresses through a uniform and comprehensive curriculum designed to achieve this goal. Elective clinical clerkships expose students to specialty or subspecialty fields during training, and later they may specialize. At PCOM, students are trained first as family practitioners and thus build solid foundations for their careers. Throughout the curriculum, osteopathic concepts and methods are stressed.

Efficiency is also an educational goal, maximizing each student’s learning by utilizing the most effective educational methodologies available. Innovations such as computerized tutorials, classroom videos and simulated patient encounters will sharpen skills as a physician. The curriculum bridges departmental divisions and joins related disciplines, such as basic sciences to surgery and internal medicine, so that students relate different perspectives to a variety of conditions taught in a common time frame.

Instruction is attuned to the changing demands in American health care. A majority of PCOM’s graduates enter primary care practice, where the large majority of health problems are treated today.

The general objectives of the educational program are expressed as “core competencies,” the domains of knowledge and skills in which all students must demonstrate competency to earn the degree, Doctor of Osteopathic Medicine:

1. Osteopathic principles and practice, which are established and incorporated in the development of skills.

2. Patient care that is compassionate, appropriate and effective for the treatment of health problems and the promotion of health.
3. Medical knowledge about established and evolving biomedical, clinical and cognate (e.g., epidemiological and social-behavioral) sciences and the application of this knowledge to patient care.

4. Practice-based learning and improvement that involves investigation and self-evaluation of patient care, appraisal and assimilation of scientific evidence, and improvements in patient care.

5. Interpersonal and communications skills that result in effective information exchange and teaming with patients, their families and other health professionals.

6. Professionalism, as manifested through a commitment to carrying out professional responsibilities, adherence to ethical principles, and sensitivity to a diverse patient population.

7. Systems-based practice, as manifested by actions that demonstrate an awareness of the larger context and system of health care and the ability to effectively call on system resources to provide optimal care.

8. Information literacy, as manifested by the capability to access, understand and apply biomedical information, and actions that demonstrate the skills necessary to utilize information technology tools to effectively access information from various resources and formats.

The Basic Sciences and Preclinical Years

PCOM students begin preparation for the world of clinical medicine from their first day as medical students. The curriculum combines basic science and clinical course content with integrated courses such as Cellular and Molecular Basis of Medicine, as well as integrated approaches to the pharmacology, pathology, medicine and surgery related to respiratory, genitourinary, cardiovascular and gastrointestinal systems.

The first two years lay the foundation with intense concentration on the basic sciences, anatomy, biochemistry, molecular biology, neuroscience, physiology, microbiology, pathology and pharmacology, taught in integrated course units that emphasize clinical applications. PCOM also recognizes that medical practice is more than science. Coursework in ethics and patient communication helps the student relate well to patients, while content in evidence-based medicine and public health prepares the student for the complex world of private practice.

The basic sciences are complemented by instruction in clinical subjects such as internal medicine, surgery, neurology, psychiatry, pediatrics, epidemiology, OB/GYN, family medicine, rehabilitation medicine, geriatrics, radiology, oncology and physical diagnosis. The principles and practice of osteopathic medicine are taught throughout the medical curriculum. All students attend small group sessions during the first and second year to develop communication
and diagnostic skills. These special instructional activities include patient observation, case conferences and basic clinical skills workshops. In addition, an active standardized patient and robotic simulation program introduces students to patient care through examinations of patient actors in a simulated practice setting, augmented by clinical exercises on high-tech human patient simulator manikins.

**Clinical Education**

The last two years emphasize clinical training experiences. Philadelphia Campus students are assigned to clinical clerkships throughout the Commonwealth of Pennsylvania and neighboring states. This unique training network comprises 97 affiliated hospitals, five Healthcare Centers, numerous outpatient units and scores of physicians’ offices. These clinical settings become teaching arms of the College; in effect, the Commonwealth is our campus. Students at the Georgia Campus are assigned to clinical clerkships throughout Georgia and the Southeast.

The program is designed to afford progressive student responsibility for all phases of patient care under the direction of experienced physicians. This includes history taking, physical examinations, daily patient rounds, lectures, conferences and case presentations. Students rotate through services in medicine, family practice, manipulative medicine, surgery, cardiology, OB/GYN, pediatrics, psychiatry, otolaryngology and office-based preceptorships. On elective clerkships, students may choose to pursue special interests at other medical institutions anywhere across the nation. All students receive additional training in osteopathic manipulative medicine during the third year.

One objective of the College is to encourage graduates to practice in communities where health care services are most needed. Therefore, each student entering PCOM must be willing to accept clinical education assignments throughout the region.

Each senior student serves at least eight weeks in an under-served community clerkship. An alternative rural elective is offered to a limited number of students, whereby the student may select an area of alternative health care delivery or a rural area of intense medical need. In the past, students have chosen studies in India, Israel, Africa, Appalachia and Indian Health Service sites.

**Requirements for Graduation**

Each candidate for the degree of Doctor of Osteopathic Medicine (DO) must be age 21 or older, be of good moral character and have passed Parts I and II of the COMLEX (National Board of Osteopathic Medical Examiners), including the Level II Physical Examination component. Each candidate must have completed satisfactorily the program of study PCOM requires for the degree within seven years from the date of initial matriculation. Attendance at the Commencement ceremonies conferring the degree is required of each candidate.
Requirements for Practice
Each recipient of the DO degree must fulfill the requirements of the state licensing board of the state in which the physician chooses to practice. These requirements vary widely and are regulated by the laws of each state.

Pre-doctoral Research
Opportunities exist for extracurricular research experience for all of PCOM’s students. Research laboratories and equipment, as well as electron microscopic computer and animal facilities, are available for this purpose. Students have the opportunity to work with faculty members on a variety of biomedical topics.

Most research is performed between the first and second academic years. Students may be partially funded for their research efforts, based on eligibility, through College work-study or external granting agencies. A compilation of faculty research projects/interests may be obtained from the senior associate dean for preclinical education and research.

Undergraduate Fellowship/Joint Degree Programs – Philadelphia Campus

Undergraduate Fellowship in Osteopathic Manipulative Medicine
The undergraduate OMM Fellowship seeks to assist in the development of the student into a highly skilled clinician in all aspects of osteopathic medicine. Students may enter the undergraduate fellowship after their second year of study. The fellowship extends the clinical clerkship curriculum to three years. At least 12 months of clinical training is provided in the Department of Osteopathic Manipulative Medicine in this special program. Fellows have special academic, clinical and research responsibilities beyond those of other students. Fellows receive remission of tuition, a monthly stipend and travel allowance.

DO/MBA Program
In conjunction with Saint Joseph’s University, a master of business administration degree in health and medical services may be earned by DO program students who concurrently complete a five year course of study for the DO degree and a two year program for the MBA. Created in 1989 as the nation's first DO/MBA degree, the curriculum requires approximately 39-42 hours of MBA coursework during two summer sessions and four semesters of evening classes in the joint program. This program responds to the increasing need for business acumen in medical practice. It also prepares physicians for a wide range of emerging careers in medical administration. The St. Joseph’s University MBA is accredited by the Association to Advance Collegiate Schools of Business (AACSB).

DO/MA in Healthcare Ethics Program
Osteopathic medical students may obtain a master of arts (MA) in healthcare ethics from St. Joseph's University while completing the DO program at PCOM by concurrently completing a five year course of study for the DO degree and a
two year program for the MA. This degree combination augments the medical curriculum by enabling PCOM medical graduates to better understand and address the ethical, cultural, and philosophical issues that influence health care and professional practice. Required healthcare ethics courses are scheduled in the evening, weekend, summer session or online, to accommodate the half-time day medical curriculum of the participating students.

DO/MPH Program
Students who have successfully completed their first year of study at PCOM may enter a special joint degree program in affiliation with Temple University, leading to a master of public health degree. Like the DO/MBA program, the master of public health track is a five year program. The DO/MPH program specializes in community health education and prepares physicians to serve as public health officials and to fill positions in community, government and health care agencies. The master of public health degree also prepares students for eventual specialty training and certification in occupational or environmental medicine. The Temple MPH program is accredited by the Council for Education in Public Health (CEPH).

DO/MS/PhD in Health Policy Program
Conducted in association with the University of the Sciences in Philadelphia, the DO/MS/PhD program in health policy studies allows PCOM students to augment their medical education with health policy studies leading to the master of science, with an option to progress to a research-based doctoral program. The program prepares students for positions of local or national leadership in health policy making and analysis through the study of research methods, epidemiology, economics, technology, statistics, law and public health policy. Graduates are trained to research and analyze issues affecting health care delivery and health status in a range of professional settings. The DO/MS/PhD program is a dual-degree track open to qualified first year DO students. Students interested in a non-research health policy program may opt for the MPH in health policy.

DO/MS in Forensic Medicine
Students who have successfully completed their first year of medical study at PCOM may enter a special five year degree program provided by PCOM's Department of Pathology, Microbiology, Immunology and Forensic Medicine, leading to a master of science in forensic medicine. Students complete forensic medicine graduate work through on-campus weekend courses and online instruction during an extended sophomore medical year.

The program provides a core foundation in the theory, principles, ethics, professional practice and legal aspects of forensic medicine. Students acquire skills in the technical aspects of death scene investigation, identifying, preserving and protecting custody of forensic evidence, differentiating accidental and intentional injuries in both living and dead persons, and determining potential forensic value of written and photographic records. The program also provides skills in the interpretation of research in forensics and skills in utilizing
information technology to access information in the forensic sciences.

DO/MS in Organizational Development and Leadership (ODL)
Students who have successfully completed their first year of medical study at PCOM may enter a special five year degree program provided by PCOM's Department of Psychology, leading to a master of science degree in organizational development and leadership. Students complete graduate work through on-campus evening class sessions and during an extended sophomore medical year.

The program is designed to incorporate psychological theory and research in teaching the basic skills and techniques of organizational leadership. The mission of the ODL program is to prepare leaders in the art and science of managing strategic change by teaching the competencies and skill sets for improving organizational performance and realizing human potential. A key training focus of the program is the development of program evaluation methods and the creation and use of performance-based outcome measures.

DO/MS in Biomedical Sciences – Neuromusculoskeletal Science Concentration (NMS)
Students may choose to complete a five year program that provides a foundation of advanced instruction in neuromusculoskeletal sciences and its underlying evidence-base. The program focuses on the philosophy and art of osteopathic medicine; the art of clinical patient observation, palpatory diagnosis and treatment; osteopathic principles and physiologic motions (regional and intersegmental) in evaluation; and diagnosis of musculoskeletal disorders. The course of study includes instruction in research design and statistics, and completion of a master's thesis in neuromusculoskeletal science. Completion of the program provides the student with the competencies to apply advanced neuromusculoskeletal concepts in the clinical practice setting, teach and/or conduct original research in neuromusculoskeletal medicine.

Joint Degree Program – Georgia Campus

DO/MBA Program
Osteopathic medical students at the Georgia Campus may earn the master of business administration in healthcare management while completing the DO curriculum through a program in partnership with Brenau University, Gainesville, Georgia. This program responds to the increasing need for business acumen in medical practice. Students concurrently complete a five year course of study for the DO degree and a two year program for the MBA during two summer sessions and four semesters of evening classes. The healthcare management curriculum involves 46 credits of graduate work offered in traditional and online courses. The Brenau University MBA program is accredited by the International Assembly for Collegiate Business Education (IACBE).
Postdoctoral Medical Education

The education of a physician is not complete upon the attainment of a medical degree; it is a continual process. PCOM offers postdoctoral courses and residency programs to further the education of recent graduates of colleges of osteopathic medicine and to maintain the knowledge and skills of practicing osteopathic physicians.

Internships and Residencies
PCOM is continuously expanding internship and residency opportunities to serve the postgraduate educational needs of graduates of PCOM and other osteopathic medical colleges. Through affiliations with Roxborough Memorial Hospital, Chestnut Hill Hospital and many others, approximately 125 PCOM interns and residents are currently in GME training.

PCOM also sponsors AOA-approved internship and residency programs at numerous PCOM MEDNet (OPTI) affiliated hospitals throughout the southeastern Pennsylvania region, which include:

- Abington Memorial Hospital*
- Albert Einstein Medical Center*
- Altoona Hospital Center for Medicine*
- Aria Health*
- AtlantiCare*
- Bryn Mawr Hospital*
- Christiana Care Health Services*
- Crozer-Chester Medical Center
- Deborah Heart and Lung Center*
- Delaware County Memorial Hospital/Crozer Keystone Health System Geisinger Health System*
- Heart of Lancaster Regional Medical Center*
- Lankenau Hospital*
- Latrobe Area Hospital and Health Network*
- Lehigh Valley Health Network*
- The Medical Center, Beaver*
- Memorial Hospital, York*
- Mercy Catholic Medical Center
- Mercy Suburban Hospital
- PCOM Consortium
- Pennsylvania Hospital*
- Pinnacle Health at Community General Osteopathic Hospital*
- The Reading Hospital and Medical Center*
- Sacred Heart Hospital (Allentown)*
- St. Joseph Medical Center (Reading)*
- St. Joseph’s Hospital (North Philadelphia Health System)*

*PCOM-Sponsored Programs
The residency programs of PCOM are held to a high standard of clinical excellence, with a commitment to teaching and active encouragement of resident research. An opportunity for completion of a clinical master of science degree as part of the residency program is also available. The College currently offers approved residency training in a wide array of clinical specialties including neuromusculoskeletal medicine, as listed below.

**Postgraduate Training Programs**

Internship – Approved Positions: 7
Richard A. Pascucci, DO, Vice Dean for Clinical Education

Otorhinolaryngology – Approved Positions: 15
Mahmoud Ghaderi, DO, Program Director

Family Practice – Approved Positions: 16
David Kuo, DO, Program Director

General Surgery – Approved Positions: 35
Arthur Sesso, DO, Program Director

Geriatrics – Approved Positions: 6
Katherine Galluzzi, DO, Program Director

Internal Medicine – Approved Positions: 30
Michael Venditto, DO, Program Director

Neuromusculoskeletal Medicine (NMM+1) – Approved Positions: 4
Alexander Nicholas, DO, Program Director

Neuromusculoskeletal Medicine (NMM/OMT) – Approved Positions: 3
Alexander Nicholas, DO, Program Director

Neurosurgery – Approved Positions: 12
Richard Kanoff, DO, Program Director

OB/GYN – Approved Positions: 8
Saul Jeck, DO, Program Director

*PCOM-Sponsored Programs*
Ophthalmology – Approved Positions: 7
David Ringel, DO, Program Director

Orthopedic Surgery – Approved Positions: 30
Maxwell Stepanuk, DO, Program Director

Plastic and Reconstructive Surgery – Approved Positions: 8
Sherman Leis, DO, Program Director

Vascular Surgery – Approved Positions: 3
Matthew Lawrence, DO, Program Director

Admission to Postgraduate Training
Enrollment in the internship and residency programs at PCOM is highly competitive in order for the most qualified applicants to receive the highest quality training. All programs participate in the Electronic Residency Application Service (ERAS) and the AOA Intern Match (IRP).

The minimum requirements for admission to a rotating internship are:

1. Graduation from a college of osteopathic medicine approved by the American Osteopathic Association.

2. A record of scholastic achievement indicative of the ability to benefit fully from a year of AOA-approved internship training.

The minimum requirements for admission to a residency in one of the various specialties are:

1. Graduation from a college of osteopathic medicine approved by the American Osteopathic Association.

2. Completion of an AOA-approved PGY-1 year.

3. A record of scholastic and clinical achievement indicative of the ability to benefit fully from the residency training program.

Application requests for an internship or residency should be addressed to:

Office of Graduate Medical Education
Philadelphia College of Osteopathic Medicine
4190 City Avenue
Philadelphia, PA 19131
215-871-6690 or gme@pcom.edu
215-871-6695 (fax)
Clinical Master of Science Program

PCOM conducts programs of study in clinical specialties leading to the clinical master of science degree (MSc). This postdoctoral award is available to any osteopathic physician pursuing a full-time residency program at any PCOM affiliated hospital or an osteopathic attending physician who is a staff member at such medical centers.

Application for admission to the program, leading to a clinical master of science degree, shall be submitted to the vice dean for clinical education at least one academic year prior to the academic year in which the candidate expects to receive his or her degree.

The minimum requirements for admission of residents and interns to the clinical master of science program include all of the following entry criteria:

1. Graduation from a college of osteopathic medicine approved by the American Osteopathic Association.

2. Completion of a PGY-1 internship approved by the American Osteopathic Association.

3. Full-time enrollment in a residency program at a PCOM affiliated hospital.

For interns and residents, there is no tuition fee; for osteopathic attending physicians who are staff members at a PCOM affiliated hospital the academic charge is $500 per year of enrollment in this program.

The procedures to be followed for completion of requirements for the master of science degree include:

1. A research project proposal (RPP) describing the proposed research shall be submitted. Research is defined as an original systematic inquiry into a biomedical subject to discover or revise facts, theories, applications, or to improve medical care. The RPP shall have the approval of the chair of the resident's department and then will be submitted in writing to the senior associate dean for clinical education. Osteopathic attending physicians will submit their RPP in writing directly to the vice dean for clinical education. After review, the candidate will be notified in writing of approval of the RPP.

2. After receiving such approval, the candidate will then submit the RPP to the appropriate committees (e.g., IRB, IACUC, Biohazards) of the institution where the research is to be conducted, and forward all letters of approval to the vice dean for clinical education. Upon approval by all appropriate committees, the senior associate dean for clinical education, in consultation with the resident, shall establish a Thesis Committee.
3. The Thesis Committee shall supervise the progress of the project and writing of the thesis. The committee shall be composed of at least three members, including the advisor. It is strongly suggested that one committee member be selected from the College’s basic science faculty. The committee membership must be approved by the office of the vice dean for clinical education.

4. The candidate may request advice from any faculty member or others who may be of assistance, but it shall be the responsibility of the candidate to perform all of the necessary requirements for completion of the project, including statistical analysis and writing of the thesis. The candidate shall meet at least twice with the Thesis Committee to report on the progress prior to the final defense.

5. Upon completion of the program, the candidate shall present his or her findings to a general audience of the faculty, as well as to the Thesis Committee in a private session. The deadline for the presentation shall be March 15 of the year in which the degree is expected. The Thesis Committee shall convey its recommendation to the vice dean for clinical education.

6. The vice dean for clinical education shall submit his or her recommendation to the Provost, who will petition the President and the Board of Trustees.

7. The clinical master of science degree shall be awarded at Commencement ceremonies where the doctor of osteopathic medicine degree is conferred.

8. The thesis must be bound and presented to the Provost before graduation for deposition in the library.

Questions regarding the Clinical Master of Science program should be directed to:

Clinical Master of Science Program
Philadelphia College of Osteopathic Medicine
4170 City Avenue
Philadelphia, PA 19131
215-871-6589 or fredg@pcom.edu

Continuing Medical Education

In order to maintain and expand the knowledge and skills of practicing osteopathic physicians and other health professionals, PCOM offers continuing medical education (CME) programs throughout the academic year. The College follows the guidelines of the AOA Committee on Continuing Medical Education and related criteria. Most of the programs are designed to qualify for AOA Category 1A CME credits.

The College offers programs in a wide variety of clinical subjects, osteopathic
therapeutics, medical office management and other topics of importance to the practicing physician. The program includes short weekend seminars, extended programs and special intensive workshops.

All CME programs are organized under the auspices of the Department of Continuing Medical Education and are intended for physicians and other health professionals. Program announcements are mailed with the Pennsylvania Osteopathic Medical Association newsletter. For the CME course calendar published annually, program information, and fee/tuition schedules, inquiries should be addressed to:

Department of Continuing Medical Education
Philadelphia College of Osteopathic Medicine
4170 City Avenue
Philadelphia, PA 19131
215-871-6348; 215-871-6781 (fax)

The updated CME calendar is also available on PCOM’s Web site at www.pcom.edu. Click on “Continuing Medical Education” from the homepage.
SCHOOL OF PHARMACY

Doctor of Pharmacy

Philosophy
The PCOM School of Pharmacy – Georgia Campus curriculum emphasizes patient-centered care, a model consistent with the applied emphasis of PCOM’s graduate and medical programs. The mission of the GA-PCOM PharmD program is to educate caring, proactive pharmacists according to a practice model in which the practitioner assumes responsibility for a patient’s medication-related needs and is held accountable for this commitment. The program also responds to the need for pharmacists in the nation, the state of Georgia, and the southeastern region. The program educates pharmacists who prepare and provide drug products and assume responsibility for the rational use of drugs by contributing to the design, implementation, monitoring and modification of therapeutic plans that will achieve defined goals and improve therapeutic outcomes.

Educational Goals
The GA-PCOM School of Pharmacy prepares generalist, entry-level pharmacists who are able to deliver high-quality pharmaceutical care. To achieve this mission, students must develop the knowledge, skills, and attitudes that enable them to competently: (a) provide population-based and patient-specific pharmaceutical care, (b) manage and use resources of the health care system, and (c) promote health improvement, wellness, and disease prevention. While preparing pharmacy practitioners is the primary mission of the Doctor of Pharmacy program, the program also provides an avenue by which students may explore a broad range of career opportunities. The program therefore aspires to foster interest in the creation of new knowledge to enhance patient health outcomes and quality of life and also to prepare students for further education.

Curriculum
The program is configured in a curricular format in which students complete:

1. the pre-professional phase (3 or 4 years) of general education, biomedical and pre-pharmaceutical sciences instruction at undergraduate colleges

2. the last four years of pharmacy sciences and practice instruction at the GA-PCOM facility, as well as clinical experiences at clinical sites throughout Georgia and the southeast.

Each term is a 13 week period, corresponding to the calendar used by the PCOM Doctor of Osteopathic Medicine programs in both Philadelphia and Georgia. The extension of coursework over the three terms each academic year provides the opportunity for the across-the-curriculum development of skills. The curriculum is composed of courses in biomedical sciences, pharmaceutical sciences, social/behavioral/administrative sciences, and clinical sciences. A number of
elective courses are available to allow students to enhance their knowledge of pharmacy–related topics in specific areas. There are five Introductory Pharmacy Practice Experiences (IPPE) in which students are given exposure to pharmacy practices in a variety of different practice sites and begin their hands-on experiences. The final year of the program consists of the Advanced Pharmacy Practice Experiences (APPE) in which students are required to complete eight different rotations. These rotations consist of five weeks in a particular pharmacy practice site.

Required rotations include:
– Medicine
– Ambulatory Care
– Hospital Practice
– Community Practice

Elective rotations will include rotations such as (but not limited to):
– Cardiology
– Infectious Diseases
– Pediatrics
– Compounding Pharmacy
– Pharmaceutical Industry Management

This curriculum, including active learning skills development time, is designed to develop the knowledge, professional skills, professional attitudes and values that are required for an entry-level pharmacist.

Requirements for Graduation
Each candidate for the degree of Doctor of Pharmacy (PharmD) must be of good moral character and have completed satisfactorily all academic requirements in the program of study. All requirements for the degree must be completed within seven years from the date of initial matriculation. PharmD graduates must demonstrate that they have acquired competency in six basic areas of knowledge, skills and values: pharmacy knowledge and practice skills, patient care skills, communication/interpersonal skills, professionalism, understanding and skills in the use of information and empirical evidence, and skills in systems-based practice.

Licensure
In general, in order to take the pharmacist licensure examination, boards of pharmacy will require successful completion of the requirements for the Doctor of Pharmacy degree from an accredited institution and completion of a certain number of hours as a pharmacy intern. In Georgia, applicants for pharmacist licensure must be at least 18 years of age, have graduated from an approved school of pharmacy and completed 1,500 hours of internship under the supervision of a registered pharmacist. Schools of pharmacy in Georgia allow students to claim credit for 1,000 internship hours obtained during experiential rotations and the student is required to obtain 500 additional hours on his or her
own as a licensed pharmacy intern. An applicant may register with the Georgia Board of Pharmacy as a pharmacy intern if he or she is registered in an accredited school/college of pharmacy.

All students at the PCOM School of Pharmacy – Georgia Campus are required to obtain their Georgia intern license during the first semester and the School will assist with the application process. Any student found to be ineligible to be licensed as a pharmacy intern in the State of Georgia, at any time during his or her tenure at the PCOM School of Pharmacy – Georgia Campus, will be dismissed from the program. PCOM students must maintain their intern license in order to legally participate in the experiential pharmacy rotations. The licensure requirements for pharmacists and pharmacy interns vary by state and it is recommended that applicants inquire with the board of pharmacy in the state where they intend to practice if they have any questions.
GRADUATE PROGRAMS

Clinical Psychology – Doctor of Psychology (PsyD)
PCOM’s Psychology Department presents a practitioner-scholar program that prepares graduates for leadership roles in clinical psychology. The PsyD program is a multi-year American Psychological Association accredited curriculum designed for in-career professionals. The curriculum integrates the Department of Psychology’s interdisciplinary core graduate courses, the competencies listed by the National Council of Schools of Professional Psychology, and the core areas of the American Psychological Association and the National Register. Successful completion of the program allows the graduate to qualify for the Examination for Professional Practice of Psychology (EPPP) for licensure as a psychologist. The PsyD program has four major components:

1. The sequence of courses, which includes a minimum of eight terms of practicum experience.

2. Passing the three-part comprehensive examination. Completion of the first two portions of the comprehensive examination makes students eligible to begin the dissertation process.

4. Completing a clinical psychology internship. Successful completion of the first three years of coursework and the comprehensive examination confers doctoral candidate status on the PsyD student, who may then proceed to internship.

Upon completion of the comprehensive examination and admission to doctoral candidacy, students are awarded a master of science in clinical psychology.

School Psychology – Doctor of Psychology (PsyD)
The PsyD in the School Psychology program is intended for specialist-level certified school psychologists and requires the MA or MS and specialist level training (minimum) of 60 graduate credits as a prerequisite. One 3-credit course in each of the core foundation areas including: ethics, research, statistics, psychometric theory, biological basis of behavior, cognitive-affective bases of behavior, social bases of behavior, and individual differences as well as courses in consultation and educational assessment is required. The doctoral program requires 61 credits beyond the specialist level, with coursework in professional school psychology, consultation/intervention, development, cognitive therapy, community psychology, assessment and electives. Students must complete a doctoral level internship and dissertation. The School Psychology program offers both a therapy-focused emphasis and a school neuropsychology emphasis with classes in a traditional evening on-campus schedule. The program is approved by the National Association of School Psychology (NASP) and is accepted by the Association of State and Provincial Psychology Boards (ASPPB) as a doctoral psychology program meeting designation criteria.
School Psychology – Master of Science (MS)
The Master of Science in School Psychology program is designed to provide students with a broad theoretical and practical background in psychology, child development, learning and research. It is a training program to prepare paraprofessionals in community and school settings that provide mental health services to children, youth and families. The program requires 36 credits of graduate study including 18 credits of residency and a comprehensive examination. The MS program is augmented by the specialist-level certification curriculum for students seeking state certification as school psychologists.

School Psychology – Educational Specialist (EdS)
The certification curriculum serves school personnel, social workers and others with a master's degree in a field related to psychology or students who have completed the PCOM MS in School Psychology program. The program is an applied professional psychology curriculum focusing on the interrelation of school learning and social, emotional and behavioral functioning and requires 45 graduate credits beyond the master's degree. Upon completion of program requirements and a satisfactory score on the PRAXIS I exam, graduates can attain school psychologist certification by the Commonwealth of Pennsylvania and apply for national (NCSP) certification eligibility. The program is NASP-approved.

Counseling and Clinical Health Psychology – Master of Science (MS)
Graduates of the Master of Science in Counseling and Clinical Health Psychology program are prepared to provide evaluation, counseling and therapy services to clients in a variety of clinical settings with an emphasis on using psychological interventions in the treatment of medical problems. This two-year, 48-credit program trains mental health care providers to work in primary care settings, collaborating with the primary care physician utilizing a biopsychosocial model. The MS curriculum, in conjunction with four certificate of advanced graduate studies (CAGS) courses, is designed to fulfill the course requirements for the Pennsylvania Licensed Professional Counselor Examination. Students may also elect a concentration in addictions and offender counseling. Applicants to the MS program must have a bachelor's degree from an accredited institution.

Organizational Development and Leadership – Master of Science (MS) and Certificate
Designed for the working professional, the Master of Science in Organizational Development and Leadership program prepares working professionals to use the theory, skills and techniques of organization building and leadership to become leaders in their field. The 36-credit master program and the 18-credit certificate program are designed to incorporate psychological theory and research in teaching the basic skills and techniques of organizational leadership. The mission of the ODL program is to prepare leaders in the art and science of managing strategic change by teaching the competencies and skill sets for improving organization performance and realizing human potential. A key training focus of the program is the development of program evaluation methods and the creation
and use of performance-based outcome measures. Coordinated by the Department of Psychology, the coursework is scheduled in evenings and on weekends.

**Biomedical Sciences – Master of Science (MS)**
The PCOM graduate program in biomedical sciences provides an opportunity for students with baccalaureate degrees to study the biomedical sciences as preparation for science careers or professional study. The program presents a broad content base in the basic biomedical sciences with a strong emphasis on human medicine and clinical applications of the material.

All students enter the program as candidates for the two-year master of science degree. The program provides a strong base of biomedical content in the first year, followed by a concentration in the second year. Upon successful completion of the first year of the graduate program, students are awarded the Certificate of Graduate Study. Concentration tracks in biomedical research (thesis), organizational leadership in the biosciences or forensic biology are offered. A non-thesis master of science track in advanced topics in biomedicine is also available at PCOM's Georgia Campus.

**Physician Assistant Studies – Master of Science (MS in Health Sciences)**
PCOM offers a full-time 26-month graduate-level program in physician assistant studies. The program provides a comprehensive didactic and laboratory year followed by a year of clinical preceptorships in a diverse variety of clinical areas. All students complete a research practicum as part of the program.

Students may also progress to the graduate program via collaborations between PCOM and three select partner institutions: the University of the Sciences (Philadelphia, PA), Brenau University (Gainesville, GA), and Thomas University (Thomasville, GA). Students following this pathway matriculate into a physician assistant pre-professional program, leading to a bachelor of science degree from the undergraduate institution. Students who meet progression standards of the undergraduate institution and the PCOM graduate program may then progress to the professional phase, leading to a Master of Science in Health Sciences from PCOM. For requirements and details on each program, please contact the respective undergraduate institution.

**Forensic Medicine – Master of Science (MS)**
The Master's Degree in Forensic Medicine program is intended for professionals who desire advanced knowledge, skills and credentialing in this specialized health area. Law enforcement professionals, nurse practitioners, paramedics and other mid-level health professionals seeking a graduate degree can benefit from this program, which is scheduled in evening and weekend sessions to accommodate the working professional. The forensic medicine program focuses on the emerging demand for medico-legal investigations by medical examiner staff and provides a foundation in forensic investigations and autopsy skills.
Forensic Medicine Pathway Program
The Pathway program is designed for non-science majors who are interested in forensic medicine and who possess a bachelor's degree in a forensic-related field (e.g., criminal justice, psychology, sociology or anthropology). This program is designed to allow those without a strong science background to receive the necessary preparation for the Master of Science in Forensic Medicine program. The Pathway program is a 14-week preparatory course in general biology and human anatomy and physiology that lasts from May to August. Upon successful completion, the student will enter the Master of Science in Forensic Medicine degree program starting the following fall term. (Please note that no degree is awarded upon completion of the Pathway program.)

Postdoctoral Certificate in Psychology
PCOM's Post-Doctoral Certificates in Clinical Health Psychology and in Clinical Neuropsychology each provide one year (16 and 19 credits respectively) of specialty training to doctoral-level psychologists or current PCOM Clinical PsyD students that will enable them to render ethical comprehensive services in medical settings and to medical patients.

Certificate of Advanced Graduate Studies in Psychology
This program provides graduate-level psychology and counseling courses to individuals seeking to meet credentialing requirements or augment their training. The Psychology Department offers two CAGS specialization tracks: Certificate of Advanced Graduate Study in Cognitive Behavior Therapy and Certificate of Advanced Graduate Study in Professional Psychology. Applicants for a Certificate of Advanced Graduate Study must have completed a master's degree in psychology, counseling or a related discipline. Students will complete 12 graduate credits to earn the certificate. Classes are held on weekday evenings and on some weekends.

The Cognitive Behavior Therapy (CBT) Track is designed to train mental health professionals in the application, theory and advanced practice of cognitive behavior therapy. A 6-credit cognitive behavior therapy seminar taught by Arthur Freeman, EdD, ABPP, forms the basis of this program. This seminar runs from September through June and is held on one Saturday a month plus one full Sunday. In addition, students complete two 3-credit courses taught with a cognitive behavior therapy focus.

The Professional Psychology Track is an individualized program designed to provide mental health professionals with the courses necessary to take the licensing exam that leads to a Licensed Professional Counselor (LPC) credential in Pennsylvania and the National Certified Counselor (NCC) credential. These courses may be used in conjunction with an earned master's degree from an accredited college to complete the 60 course credits required to take the LPC licensing exam. For additional information regarding Pennsylvania state licensing requirements, students are encouraged to visit the Web site for the Pennsylvania State Board of Social Workers, Marriage and Family Therapists and Professional
Counselors. Students needing more than 12 credits to take the licensure examination may take up to two additional graduate courses offered within PCOM's MS program in Counseling and Clinical Health Psychology program at the discretion of the program director.

Biomedical Science – Master of Science – Degree Concentration

Master of Science degree can be awarded in one of the following concentrations:

Biomedical Science – Research Concentration
Philadelphia and Georgia Campuses

Biomedical Science – Non-Thesis Concentration
Georgia Campus

Biomedical Science – Forensic Biology Concentration
Philadelphia and Georgia Campuses

Biomedical Science – Organizational Leadership in the Biosciences
Philadelphia and Georgia Campuses

Non-thesis, Forensic Biology, and Organizational Leadership in the Biosciences Concentrations begin in the fall, after completion of the first year of the Biomedical Sciences program. The Research Concentration can begin in either summer or fall.

Total Credits .................................................. 24

Total credits required beyond certificate for degree completion .............. 24

Year II Research: Graduate students under the supervision of a mentor will be required to take Biostatistics/Epidemiology and can enroll in other Year 2 courses as advised by their mentor. In addition, they will be expected to be full-time students and be present on campus or in a lab for the time required to meet their advisor’s expectations. All Thesis students will fill out the balance of their second year with Research hours unless their mentor requests that they take additional hours of upper level coursework specific to their area of focus. In no case will a student enroll in less than 12 hours of Biomedical Research-693G to fulfill the research and Thesis requirement. It should be noted by all students looking at this track that there is an expectation that full-time graduate students during this year will be engaged in research the entire year and that students should plan on utilizing the summer between years one and two to fulfill requirements in research orientation within a given lab.
Forensic Biology Concentration – Philadelphia and Georgia Campuses

Forensic biology track students receive practical instruction through coursework and an internship in a medical examiner's office. The forensic biology track is a combination of online instruction and intensive weekend sessions. The weekend sessions are held at the Philadelphia Campus.

Total credits required for degree completion ................. 89

Credits for years five through eight (see #3 below)

1. Students must complete a total of 9 credit hours of electives, to be taken after the completion of the first two years of core courses.

2. Following the completion of 9 credit hours of research, which includes Research III, IV and V, students must register for one credit Dissertation Advisement each term until thesis is successfully defended.

3. Students who register concurrently each term for one credit of internship and dissertation will have the fee waived for one of these credits. This is done only after the 9 credits of research are completed.

Note that this is only a sample plan. The College reserves the right to change course sequencing.

**Total Credits**  

**Total credits required for degree completion**  

*Internship and Dissertation credits (beyond the 9 credits for research) do not count toward the minimum of 89 credits for degree requirements.

Credits for years five through eight (see #3 below)

1. Students must complete a total of 9 credit hours of electives, to be taken after the completion of the first two years of core courses.

2. Following the completion of 9 credit hours of research, which includes Research III, IV and V, students must register for one credit Dissertation Advisement each term until thesis is successfully defended.

3. Students who register concurrently each term for one credit of internship and dissertation will have the fee waived for one of these credits. This is done only
after the 9 credits of research are completed.

Note that this is only a sample plan. The College reserves the right to change course sequencing.

**Total credits for year** ................................................................. **19**

*Practicum (8-20 on-site hours per week with group supervision plus practicum course).
DO 111 – Structural Principles of Osteopathic Medicine – (SPOM)  
13 credits
– Gross Anatomy Unit  
Laboratory dissection of the human body in a systematic manner using a regional approach; augmented by use of models, plastinated prosections; the Cathie Collection of human specimens, radiological films, video tapes of human dissection, computer aided instruction and real-time prosections; application of clinical anatomy made in student-led clinical correlation assignments.

– Developmental Anatomy Unit  
Normal human development; abnormal development of clinical importance to understand congenital anomalies; correlation with gross anatomy unit.

– Histology Unit  
Recognize normal structure and function of cells, tissues and organs through use of microscopic images; conferences utilize a clinical case format to underscore basic science and clinical concepts; essential knowledge leading to the understanding of and recognition of pathological conditions.

– Radiographic Anatomy Unit  
Normal radiographic anatomy correlated with gross and developmental anatomy. Emphasis is on normal and developmental roentgen anatomy as it relates to clinical medicine; introduction to terminology and application of contemporary imaging methods, CT and MRI.

DO 121 – Cellular and Molecular Basis of Medicine  
14 credits
Review normal cellular structure and function; perturbations of normal cellular and organ function; introduction to neoplastic diseases, carcinogenesis, tumor cell biology; diagnosis, staging and management of cancer, emphasis on hematology oncology; blood and blood-related diseases such as clotting and hematopoietic disorders; normal metabolic processes contrasted with perturbations, e.g., diabetes, arthritis, cystic fibrosis. Cellular injury induced by physical, chemical and microbial entities. Immune response; host-parasite relationship with discussions of microbial pathogenicity, infectious disease, acute and chronic inflammation. Introduction to pharmacologic intervention; principles of clinical pharmacology; drugs' alteration of inflammatory and immune processes; antimicrobial medications. Clinical case conferences underscore basic and clinical concepts; laboratory sessions provide direct microscopic observation of normal eucaryotic and microbial cells and an introduction to commonly used diagnostic techniques in infectious disease; clinical correlations are structured as live interactive sessions between students, a primary care physician and people living with disease.
DO 133 – Emergency Medicine I
1 credit
Basic Cardiac Life Support under American Heart Association standards and prehospital first responder skills; patient assessment in the pre-hospital environment; use of the automated external defibrillator (AED); upon successful completion, American Heart Association Healthcare Provider Course Card awarded.

DO 134 – Cardiovascular, Renal and Pulmonary Medicine
12 credits
– Cardiovascular Unit
Fundamentals of clinical cardiology; cardiac muscle function and circulation; cardiac cycle, heart sounds, clinical diagnosis of findings suggestive of underlying heart disease; arrhythmias both atrial and ventricular, commonly encountered organic heart disease – acquired, congenital, hereditary and infectious; implications of peripheral vascular disease; cardiac pathology and circulatory disorders; related pharmacology – antihypertensives, hypolipidemics, antiarrhythmic and diuretics.

– Renal and Pulmonary Unit
Etiology, diagnosis and treatment of the diseases of the renal and respiratory systems; physiology and pathophysiology of respiration and a wide variety of lung diseases from emphysema to carcinoma; pharmacology of antihistamines, anti-inflammatory agents, bronchodilator, mucolytic and antitussive agents; risk factors and management related to renal and pulmonary disorders, including occupational hazards; physiologic, pathophysiologic, and pharmacologic relation of cardiovascular, renal, and respiratory systems emphasized.

DO 138A – Preventive and Community-Based Medicine I
1 credit
First of a four part sequence introducing students to ethical principles applied to the patient encounter; in decision-making; and communication. Examples used – palliative care, obstetrics-gynecology, surgery. Concepts in epidemiology and public health related to disease presentation, prevention, reporting. Evidence-based medicine discusses basic methods in acquiring, approaching and appraising information to be used in patient care.

DO 139A, 139B, 139C – Osteopathic Principles and Practice I, II, III
2 credits each term
Total credits 6
Introduction to concepts and philosophy of osteopathic medicine; fundamentals in the art of clinical patient observation, palpation and evaluation; surface anatomical landmarks identified as foundation for future coursework in manual medicine as well as for primary care skills; physiologic motions of spine; clinical evaluation skills in active and passive motion; regional and intersegmental motion testing. Somatic dysfunction defined. Common musculoskeletal patient complaints, their osteopathic diagnosis and management; therapeutic skill
development of soft-tissue, myofascial release and counterstrain osteopathic manipulative treatments (OMT); differentiating the basis for myofascial techniques and reflex-oriented techniques; physiologic motion of the thoracic spine and rib cage as well as the biomechanical actions of the respiratory muscles; thoracic and costal somatic dysfunction clinical cases; scoliosis defined, osteopathic management of various scoliosis types; regional muscle energy and HVLA; introduction to viscero-somatic, somatic-visceral, somatic-somatic, and psychosomatic reflexes and their relevance to health and disease; pain and referred pain implications and management.

DO 140A, 140B, 140C – Primary Care Skills I, II, III
1 credit each term
Total credits 3
Fundamental techniques of physical examination and patient interviewing are correlated with knowledge of anatomy, osteopathic manipulative medicine, and cell and tissue. The medical history is introduced; concepts of osteopathic approach to primary care; psychosocial issues and the physician-patient relationship. Clinical workshops, small group case discussions and standardized patient actors are used to teach and evaluate skill acquisition.

DO 144 – Clinical Reasoning in Basic Sciences
1 credit
The development of critical thinking skills and the integration of basic and clinical science concepts are fostered in students through small group learning activities utilizing written clinical cases. The cases are developed by basic and clinical science faculty and incorporate history and physical findings, laboratory values, imaging, electrophysiology and histopathological images as needed for students to develop differential and definitive diagnoses as well as treatment plans. Basic science underpinnings of each case, particularly the pathophysiology of disease are explored by students as guided by specific learning objectives. Student progress in critical thinking and integration of basic and clinical science concepts are assessed by various means as outlined in the respective syllabi for each campus. Assessment tools could include multiple choice exams, oral exams and construction of a portfolio which may contain literature searches, reflective writing, interviews with faculty and patients, videos or photographs.

DO 212 – Gastroenterological Sciences
5 credits
Physiology and pathophysiology of the gastrointestinal system; common diseases of the gastrointestinal system, biliary tract; disorders of metabolism, and infections and infestations of the liver and GI tract; interpretation of imaging methods such as gastrointestinal endoscopy and colonoscopy; GI and adnexaoncology including surgical, medical and radiation treatment.
DO 213 – Reproductive Genitourinary and Obstetrics, Gynecologic Medicine
8 credits
Reproductive biology of both genders and pathophysiological conditions affecting each; genitourinary region of both genders especially lower urinary tract diseases; common disease processes, malformations and infectious processes. Mechanisms and consequences of sexually transmitted disease emphasizing issues in public health. Normal pregnancy, labor and puerperium; pathology related to pregnancy, diagnostic methods and treatment; non-surgical gynecological diseases; diagnostic and operative gynecology; gynecologic oncology. Behavioral and social issues related to sexuality; family planning; contraception; infertility.

DO 221 – Clinical Endocrinology
3 credits
Pathophysiology and clinical manifestation of the endocrine disorders emphasized; pituitary, thyroid, parathyroid and adrenal glands reviewed; diseases of the endocrine glands, including metabolic disorders and vitamin and nutritional disturbances.

DO 222 – Clinical and Basic Neuroscience
13 credits
Clinical and Basic Neuroscience coordinates all disciplines related to the central nervous system. Comprehensive course on the central nervous system integrating neuroscience, neurology, psychiatry, neurosurgery, neuropathology, neuropharmacology, and physical medicine and rehabilitation; structure and function of the brain and spinal cord and their role in normal and diseased body systems; laboratory macro-dissection and demonstration of human brain and spinal cord; blood supply; contemporary imaging procedures of head and spine. Neurologic history and neurologic physical examination; common diseases of brain, spinal cord, peripheral nerves and neuromuscular system; ischemic and hemorrhagic diseases; demyelination disorders, infectious diseases; trauma; neuropathology of aging and Alzheimer’s disease. Surgical interventions; craniocerebral trauma; spinal cord injury; hydrocephalus/NPH, peripheral nerve disorders and brain tumors. Neurosurgical management of pain is coordinated with other approaches to and perspectives on pain in the primary care setting.

– Psychiatry Unit
Introduction of psychiatry and behavioral medicine with implications for the generalist physician; history and evolution of practice of psychiatry; prominent theories of mind and common causes of emotional illness; evaluation of psychiatrically ill patient and principles of diagnosis; the evidence of neurobiological basis of psychiatric disease emphasized; special topics are discussed including substance abuse disorders, child and adolescent psychiatry, geriatric psychiatry, principles of psychosomatic medicine and psychiatric emergencies. Pharmacologic basis of treatment and precautions; antipsychotics, muscle relaxants; antidepressants; anticonvulsants, sedatives, endogenous
opioids, therapeutic uses of narcotics, psychomotor stimulants and psychomimetics; pharmacologic agents and their use in Parkinsonism, anxiety disorders, depression and psychosis; pharmacologic basis of addiction; special session included discussing the impaired physician. Pain and pain management; anesthetics, including general, local and narcotic; emotional overtones of pain; relation to addiction; narcotic intervention use and precautions.

DO 224 – Rheumatic Disease
1 credit
Discussions on diagnosis and therapy of clinical problems involving joints, soft tissues and the allied conditions of connective tissues; advancements in immunologic concepts related to these disorders; pathogenesis of major rheumatological disorder is described in terms of the autoimmune system, and autoimmune disease concepts. Emphasis is given to evidence-based medical treatment of rheumatological disorders.

DO 231 – General Surgery
3 credits
Introduction to patient work-up in clinical setting; “thinking clinically”; surgical skills – sterile technique, gloving/gowning, suture technique, and preoperative and postoperative care. Application of contemporary literacy methods and resources available that assist physicians in patient care optimizing outcome. Teamwork in the clinical work force; making the transformation from classroom to clinic; Henwood Lecture series – special topics in general surgery; selected topics in fundamental orthopedics and reconstructive surgery.

DO 232 – Dermatology
1 credit
Diagnosis and management of cutaneous diseases in the primary care setting; common eruptive diseases; visual training in recognition of common characteristics and variations; use of topical therapy, prescription writing, and special diagnostic and therapeutic procedures; skin manifestations of systemic disorders reviewed.

DO 233 – Life Stages: Clinical Geriatrics and Pediatrics
4 credits
– Clinical Geriatrics
Understanding the unique and complex medical aspects of older persons; clinical syndromes commonly seen in older persons emphasizing the five “I”s: impaired homeostasis, incompetence, incontinence, immobility and iatrogenesis; physiologic changes associated with aging; healthy aging; maintenance of function and nutrition; medico-legal and ethical issues; end-of-life issues – pain management, hospice, terminal care, anticipatory planning and advance directives.

– Pediatrics
Normal development and evaluation; fetus; high-risk pregnancies; premature
and newborn high-risk problems; difficulties affecting perinatal care of premature and full-term infants. Preventive pediatrics (hygiene, infant feeding and immunizations) in ambulatory office practice; hospital critical. Childhood gastrointestinal, surgical, hematologic, nose and throat, and cardiovascular problems; other disease processes and influences on fetus, newborn and general pediatric population. Fluid and electrolyte balance; emergency room care, medical aspects of trauma, fever and convulsions, the unconscious child, metabolic problems; enuresis, medical genitourinary disease and central nervous system problems – attention to developmental, neurological and behavioral pediatrics.

DO 235 – Emergency Medicine II
1 credit
Small group discussions and evaluation of case-based scenarios in the emergency setting; common emergencies review organ systems and clinical response to emergent conditions; student-led discussion with faculty facilitation.

DO 236 – Eyes, Ears, Nose and Throat (EENT)
1 credit
Common disorders and injuries to eyes, visual system, ears, auditory system, head and neck; includes review of regions and pathology; differential diagnostic and treatment patterns including surgical intervention; plastic and reconstructive surgery following trauma.

DO 238A, 238B – Preventive and Community-Based Medicine II, III
1 credit each term
Total credits 2
Continuation of the three part sequence providing students information on ethical principles applied to the patient encounter; in decision-making; and communication. Examples used – palliative care, obstetrics-gynecology, surgery. Concepts in epidemiology and public health related to disease presentation, prevention, reporting. Evidence-based medicine discusses basic methods in acquiring, approaching and appraising information to be used in patient care.

DO 239A, 239B, 239C – Osteopathic Principles and Practice IV, V, VI
2 credits each term
Total credits 6
Pelvic and lumbar reviewed; physiologic motion patterns; sacral, lumbar and pelvic somatic dysfunctions; OMT (muscle energy and HVLA) for these dysfunctions; somatic and visceral relationships that pertain to abdomen, sacrum, and pelvis with clinical correlation in reproductive, obstetric gynecologic, gastrointestinal, and urogenital disorders. Introduction to osteopathic principles in the cranial field is explored (an elective is offered in the third trimester for more complete understanding and practical palpatory diagnosis). Cervical biomechanics and somatic dysfunction reviewed; muscle energy, HVLA, counterstrain and FPR techniques related to limbs, shoulders and hips.
DO 240A, 240B, 240C – Primary Care Skills IV, V, VI
1 credit each term
Total credits 3
Advanced physical examination skills, minor-surgical skills and problem solving. Ophthalmologic and ENT examinations in the outpatient setting; advanced clinical workshops, case presentations and standardized patient exercises are integrated with second-year medical course content. Small-group laboratory instruction in general surgical skills includes sessions on surgical scrub and sterile technique, gloving and gowns, suturing, phlebotomy, IV and catheterization. Standardized patient OSCE-type evaluation is included.

DO 311 – Medical Law
2 credits
Legal obligations and ethical responsibilities of physicians, both professionally and personally; medico-legal issues such as judicial process, fraud and abuse, malpractice, torts, patient rights and privacy issues; issues related to HIPPA and compliance; online course and evaluation; begins anytime during the second year; HIPPA module satisfactory completion required to begin clinical clerkships; entire course including the online assessments must be completed by the end of the third year.

Non-Credit Advanced Cardiac Life Support – Third Year Medical
American Heart Association ACLS course; two-day; offered at the end of the radiology clerkship. Students are awarded the AHA ACLS course card, valid for two years, upon successful completion. This is required for graduation.
Doctor of Osteopathic Medicine (DO) – Georgia Campus

DO 111G – Structural Principles of Osteopathic Medicine
13 credits
This 13 week course covers human anatomical sciences including gross anatomy, embryology and microscopic anatomy. Content for each anatomical science will be presented from both a regional and systems perspective. Knowledge of anatomical science is the foundation upon which a medical education is established and an absolute requisite for successful completion of a medical education and clinical practice.

Lectures and laboratory sessions that incorporate active learning strategies will cover the anatomical sciences. Students are required to apply their knowledge of gross anatomy, embryology and microscopic anatomy to explain clinical case vignettes and medical images of anatomical structures. Microscopic anatomy is presented via digital images during lectures, relating microscopic structure to basic physiological processes. Reading assignments from required anatomy texts are used to reinforce, clarify and extend the material presented in lectures.

Full cadaver dissection gross anatomy laboratories are coordinated to follow corresponding regional lecture content. Prepared dissection specimens, X-rays, CT scans and MRI images as well as bones, models and computer resources are available for students to study. Clinical faculty are available during laboratories to reinforce the clinical anatomy correlations. This practice provides the student with an appreciation for the relevance of anatomical science knowledge to clinical osteopathic medical practice through demonstrations, clinical case studies and discovery in the laboratory dissections.

DO 121G – Cellular and Molecular Basis of Medicine
14 credits
This course introduces students to the study of disease. Course goals include providing students with a broad, fundamental knowledge background in molecular biology, genetics, medical biochemistry, microbiology, immunology, pathology and pharmacology. Disease states receiving particular attention include genetic disease, nutritional disease, hematological diseases, infection, autoimmunity, cancer and immune suppression. The basic science foundation necessary to comprehend these disease states is laid in this course. Students will begin to practice self-directed learning, and improve their communication skills by participating in group discussions. Students will also gain an appreciation for basic and clinical research in fundamental biomedical topics through required presentations.

DO 130G – Basic and Clinical Neurosciences
14 credits
Basic and Clinical Neurosciences is a multidisciplinary course covering the structure and function of the nervous system, with the greatest emphasis on the central nervous system. The course is an integration of various disciplines
including medicine, surgery, radiology, pathology, immunology and microbiology, physiology and pharmacology. This course will present the regional and systems neuroanatomy, in addition to the physiology, embryology and histology of neural systems. Neuropathology, neuroimmunology and neuroparmacology are covered. The etiology, clinical presentation, diagnosis and treatment of neurologic and neuromuscular diseases are presented by clinicians. Clinical topics include stroke, hemorrhage, trauma, seizures, headaches, demyelinating diseases, dementia, delirium and neuromuscular diseases. Principles and practice of rehabilitation of patients with stroke, spinal cord and head trauma and neuromuscular diseases are presented. Aspects of pain management including general and local anesthesia, and narcotic and non-narcotic pain relievers are presented. Case discussions complement lectures and allow students to practice self-directed learning, and improve their communication skills. Students also gain an appreciation for basic and clinical research in biomedical topics through required presentations.

DO 133G – Emergency Medicine I
1 credit
All students are trained in Basic Cardiac Life Support under American Heart Association standards and prehospital first responder skills. Emphasis is placed on teaching patient assessment in the prehospital environment, including use of the automated external defibrillator (AED). Students are awarded the American Heart Association Healthcare Provider Course Card upon successful completion.

DO 134G – Cardiovascular, Pulmonary and Renal Medicine
12 credits
Cardiovascular, Pulmonary and Renal Medicine is a multidisciplinary integrated course designed to take the student in an introductory manner through the specific physiologic and pharmacologic mechanisms, pathologic descriptions, pharmacologic interventions and applications, diagnostic specifics, therapeutic strategies and other relevant medical issues of each system and the crossover issues between systems. This course links the anatomy of the three systems to an integrated presentation of physiology, microbiology, pathology, pharmacology, imaging and general medicine of each of the systems as well as cross system complications. Clinical scenarios are presented in order to provide examples that allow the students to draw connections between basic science mechanism and clinical application. Emphasis is placed on the understanding of how structural aberration results in functional change and the recognition of how symptoms are indicative of positive (system compensation) and negative (pathological) functional change. Students are expected to apply their basic knowledge of each system to develop an understanding of how a pathological process affecting one of the three systems can and will eventually create pathological processes in the other two.
DO 138AG, 138BG, 138CG – Preventive and Community-Based Medicine I, II and III
1 credit each term
Total 3 credits
This course introduces the future osteopathic physician to clinical preventive medicine and community-based medicine and focuses on the critical components of physician responsibility and advocacy in the development and delivery of health care systems in the United States. This year long course presents the fundamentals of evidence-based medicine, biostatistics, epidemiology, ethics, preventive medicine, public health, community medicine, infection prevention and control, environmental medicine, toxicology, occupational medicine, and disaster and emergency planning. The critical need for physician advocacy within the context of socio-cultural, economic, marketing and political competence will be explored. Concepts and strategies from epidemiology, including bio-statistical analysis of current research studies, will be applied to real case studies of community issues relevant to physician responsibilities. Current medico-legal, ethical and political issues will be studied in terms of options for physician advocacy and responsibility to the community.

DO 139AG – Osteopathic Principles and Practice I
2 credits
Students are introduced to the concept and philosophy of the osteopathic school of the healing arts in lectures and practice sessions. Fundamentals in the art of observation, palpation and evaluation are presented. Practice session sheets are furnished for both instruction and recording of findings. Surface anatomy is studied and landmarks identified to lay a proper foundation for future work in this department as well as for physical diagnosis. Physiologic motions of the spine are considered in both lecture and practice sessions. Tests for active and passive motion are presented and carried out in practice sessions. Regional and inter-segmental motion testing is applied. Somatic dysfunction is defined.

DO 139BG – Osteopathic Principles and Practice II
2 credits
Clinical presentations and their osteopathic diagnosis and management are introduced. Further osteopathic fundamentals are presented in differentiating the basis for myofascial techniques and reflex-oriented techniques. Myofascial-oriented osteopathic techniques are demonstrated and students will begin their therapeutic development with soft tissue, myofascial release and counterstrain osteopathic manipulative treatments (OMT).

DO 139CG – Osteopathic Principles and Practice III
2 credits
Physiologic motion of the thoracic spine and rib cage is reviewed, as well as the biomechanical actions of the respiratory muscles. Thoracic and costal somatic dysfunctions are presented in clinical cases. Scoliosis is defined and osteopathic management of various scoliosis types is covered. Muscle energy and HVLA techniques for this region are introduced. Introduction to viscerosomatic,
somatovisceral, somatosomatic and psychosomatic reflexes and their relevance to health and disease are presented.

DO 140AG, 140BG, 140CG – Primary Care Skills I, II, III
2 credits each term
Total 6 credits
This course integrates with material presented in anatomy, osteopathic manipulative medicine, biochemistry, physiology and microbiology and clinical sciences to introduce fundamental techniques of physical examination and patient interviewing. The medical history is introduced, as are concepts in the osteopathic approach to primary care, psychosocial issues and the physician/patient relationship. The course includes an introduction to human sexuality and expands beyond the basics of physical examination skills training to address in more depth, clinical areas such as the cardiovascular, respiratory and neurologic systems. The department utilizes skill workshops, lectures, small group case discussions, standardized patient actors and the simulation model “Stan” in the instructional program.

DO 144G – Clinical Reasoning in Basic Sciences
1 credit
The development of critical thinking skills and the integration of basic and clinical science concepts are fostered in students through small group learning activities utilizing written clinical cases. The cases are developed by basic and clinical science faculty and incorporate history and physical findings, laboratory values, imaging, electrophysiology and histopathological images as needed for students to develop differential and definitive diagnoses as well as treatment plans. Basic science underpinnings of each case, particularly the pathophysiology of disease are explored by students as guided by specific learning objectives. Student progress in critical thinking and integration of basic and clinical science concepts is assessed by various means as outlined in the respective syllabi for each campus. Assessment tools could include multiple choice exams, oral exams and construction of a portfolio which may contain literature searches, reflective writing, interviews with faculty and patients, videos or photographs.

DO 211G – Basic and Clinical Endocrinology
3 credits
The endocrine unit is an integration of various disciplines including physiology, pharmacology, pathology, internal medicine and radiology. Lectures begin with a review of basic endocrine physiology, histology and embryology. Clinical lectures cover disorders of the pancreas, thyroid, parathyroids and adrenal glands, and their effects on other body systems as well as endocrine emergencies.

DO 212G – Gastroenterology
4 credits
In the GI course, the basic pathophysiology of the gastrointestinal system is presented. Clinical lecturers present a compendium of diseases of the gastrointestinal system, including the common and uncommon gastrointestinal
conditions, biliary metabolism, and infections and infestations of the liver and gut. Surgical and pharmacological management of gastrointestinal diseases is also considered.

**DO 213G – Reproductive and Genitourinary Sciences**

**6 credits**

In the reproductive/genitourinary course, a review of human reproductive physiology is followed by lectures on pathophysiology of gynecological diseases including sexually transmitted diseases, their management and prevention. Diagnostic and operative gynecology procedures are presented. Lectures on the progress and management of normal pregnancy are presented and management of the various presentations and mechanisms of labor is stressed. This is followed by studies of the pathology of pregnancy, diagnostic methods and treatment. Family planning, contraception, infertility, perinatal infections and gynecologic oncology and pharmacology associated with women's health issues are also presented. Consideration of disorders and diseases of the male genitourinary system, their diagnosis and management completes the course.

**DO 214G – Musculoskeletal/Skin**

**4 credits**

This course covers the clinical areas of orthopedics, rheumatology and dermatology as well as the pathology of diseases of the bones, joints and muscles. Basic skills and academic knowledge in orthopedics are presented to aid clerkship students in the evaluation of routine orthopedic problems. Emphasis is placed on the diagnosis and treatment of common disorders of the neck, spine, shoulders, hips and extremities. The rheumatology lectures cover inflammatory diseases of joints and connective tissues. Etiology, presentation, differential diagnosis and treatment are stressed. The dermatology lectures prepare the student for diagnosis and management of routine cutaneous diseases.

**DO 215G – Psychiatry**

**2 credits**

The psychiatry/neuropharmacology course begins with the history and evolution of psychiatry and the prominent theories of the mind and the causes of emotional illness. Evaluation of the psychiatrically ill patient and principles of psychiatric diagnosis are taught. The neurobiological basis of psychiatric disease and its treatment is discussed in detail. The relationship between brain function and psychiatric illness is a continuing discussion throughout this unit. The diagnosis and principles of treatment of the major psychiatric syndromes are presented in detail. The course continues further into the field of neuropsychiatry. Many special topics are presented, including substance abuse disorders, child and adolescent psychiatry, geriatric psychiatry, principles of psychosomatic medicine and psychiatric emergencies.
DO 232G – Surgery, Ophthalmology, ENT
2 credits
– Surgery Unit
Lectures and demonstrations deal with an introduction to surgical skills including sterile technique, suture technique, surgical diagnosis, and perioperative care. Osteopathic principles used in diagnosis and management in surgical disease states are reviewed. Suturing and gloving/gowning skills are taught in practical sessions. Clinical lectures use case presentations to integrate surgical procedures in disease management.

– Ophthalmology/ENT Unit
This unit emphasizes a clinical approach of diagnosis and treatment of common disorders of the eyes, ears, nose and throat. Didactic lectures and case presentations cover common disorders and injuries to eyes, visual system, ears, auditory system, head and neck stressing differential diagnostic and treatment options including surgical intervention.

DO 233G – Life Stages: Geriatrics and Pediatrics
2 credits
This course concentrates on disease presentations of particular importance in the pediatric and geriatric populations. The pediatrics unit emphasizes the normal development and care of the pediatric patient. Topics covered include an introduction to the pediatric history and physical, developmental milestones, ante-natal considerations, routine child care including vaccination schedules, hyperbilirubinemia syndromes, pediatric meningitis and sepsis, SIDS, fluid and electrolyte balance, respiratory problems, seizures, obesity and child abuse. Coverage of other neonatal and childhood diseases, disorders and trauma occurs in a variety of other courses during the first and second year. In the geriatric unit, students are encouraged to build on their basic science knowledge and gain a deeper understanding of the unique and complex medical aspects of older persons. Course format utilizes lectures and case studies to introduce the clinical syndromes commonly seen in older persons, including the five “I”s: impaired homeostasis, incompetence, incontinence, immobility and iatrogenesis. Physiologic changes associated with aging, healthy aging, and maintenance of function and nutrition, as well as medicolegal and ethical issues, are discussed. The course culminates in a discussion of end of life issues such as pain management, hospice, terminal care, anticipatory planning and advance directives.

DO 235G – Emergency Medicine II
2 credits
This course covers typical situations encountered in the specialty of emergency medicine. Cardiac, upper airway, traumatic, toxicological, neurologic, musculoskeletal and pediatric emergencies are covered.
DO 239AG – Osteopathic Principles and Practice IV
2 credits
The pelvic and lumbar areas are reviewed, as well as the physiologic motion patterns that pertain to these areas. Sacral, lumbar and pelvic somatic dysfunctions are discussed, and OMT for these dysfunctions is presented. The somatic and visceral relationships that pertain to these areas are also presented with clinical correlation in OB/GYN, GI and renal disease. Muscle energy and HVLA techniques for specific dysfunctions in these areas are presented.

DO 239BG – Osteopathic Principles and Practice V
2 credits
Introduction to the principles of osteopathy in the cranial field is presented in lecture (an elective is offered in the third trimester for more complete understanding and practical palpatory diagnosis). Cervical biomechanics and somatic dysfunction are reviewed, and muscle energy, HVLA, counterstrain and FPR techniques are covered in the lab sessions.

DO 239CG – Osteopathic Principles and Practice VI
2 credits
Lectures and practice sessions are correlated and directed toward the understanding and management of various appendicular problems. Basic principles are taught and practiced along with basic techniques including muscle energy, HVLA and LAS.

DO 240AG, 240BG, 240CG – Primary Care Skills IV, V, VI
1 credit each term
Total 3 credits
Advanced physical examination skills, minor-surgical skills and problem solving. Ophthalmologic and ENT examinations in the outpatient setting; advanced clinical workshops, case presentations and standardized patient exercises are integrated with second year medical course content. Small-group laboratory instruction in general surgical skills includes sessions on surgical scrub and sterile technique, gloving and gowning, suturing, phlebotomy, IV and catheterization. Standardized patient OSCE-type evaluation is included.

DO 311G – Medical Law
2 credits
Legal obligations and ethical responsibilities of physicians, both professionally and personally; medico-legal issues such as judicial process, fraud and abuse, malpractice, torts, patient rights and privacy issues; issues related to HIPPA and compliance; online course and evaluation; begins anytime during the second year; HIPPA module satisfactory completion required to begin clinical clerkships; entire course including the online assessments must be completed by the end of the third year.
Doctor of Pharmacy – Georgia Campus

DIDACTIC COURSES

PHAR 110G – Anatomy and Physiology
2 credits
The first in a three course sequence with laboratory that covers human anatomy, physiology and pathophysiology. This course, in combination with the Anatomy Laboratory presents human anatomy from a structure and function foundation. The discussion of basic cell structure, cell function, and embryological development will be followed by study of the gross anatomy of the human body using the system approach. Anatomical structure and function will be discussed with particular attention to those components most important for the practicing pharmacist. The systems covered are the nervous, muscular, endocrine, cardiovascular, lymphatic, immune, respiratory, digestive, urinary, and reproductive. In addition, the fluids and fluid compartments with respect to composition, pH, osmolality, and movement of drugs between compartments will be taught. Commonly used clinical laboratory values, and their application to diagnosing and monitoring of disease states, will be introduced as appropriate.

PHAR 112G – Anatomy Laboratory
1 credit
This course is the laboratory component of Anatomy and Physiology and generally parallels the lecture component of the course. The laboratory reinforces lecture concepts through the use of anatomical models and virtual dissection to demonstrate and identify the major anatomical structures of the human body. The discussion of anatomical structure and function will be focused on the nervous, muscular, endocrine, cardiovascular, respiratory, digestive, urinary, and reproductive systems. The cadaveric lab used by the medical students will be used at various times throughout the term to demonstrate the major anatomical structures of organ systems.

PHAR 113G – Physiology and Pathophysiology I
4 credits
The second in a three course sequence that covers human anatomy, physiology and pathophysiology. This course begins with a detailed discussion of the action potential in electrically excitable tissue and the contractile mechanism of muscle tissue. This is followed by an introduction to the concept of pathophysiology and discussion of the basic principles of how disease affects physiological function. An expanded discussion of genetics, especially with respect to congenital defects and neoplasia, is followed by discussion of the physiology and pathophysiology of the hematological, pulmonary, cardiovascular and renal systems. Thermoregulation will also be discussed. An emphasis is placed on application to the maintenance of a healthy lifestyle, understanding disease process and treatment, and the effects of drugs. Commonly used clinical laboratory values, and their application to diagnosing and monitoring of disease states, will be introduced as appropriate.
PHAR 114G – Physiology and Pathophysiology II
4 credits
The third in a three course sequence that covers human anatomy, physiology and pathophysiology. This course continues with the discussion of the physiology and pathophysiology of the neurological, gastrointestinal, endocrine, skeletal and integumentary systems. An emphasis is placed on application to the maintenance of a healthy lifestyle, understanding disease process and treatment, and the effects of drugs. Commonly used clinical laboratory values, and their application to diagnosing and monitoring of disease states, will be introduced as appropriate.

PHAR 116G – Introduction to Drugs
3 credits
An introduction to the drug development and approval process is discussed with an emphasis on the regulation and enforcement of such actions. Basic concepts of retrieving drug information from credible resources are introduced. Also included in the course content is an overview of the standard pharmacy drug classification schema including basic chemical, pharmacological, DEA, and therapeutic classifications. Representative drugs from the major categories will be presented to illustrate the importance of pharmacy-specific information such as proprietary (brand) and generic drug names, dosage forms, approved and unapproved indications, basic mechanism of action, major drug interactions, adverse effects, pregnancy risk factors, and important patient information. Finally, a brief introduction to medical terminology will be presented.

PHAR 119G – Pharmacy Communications
2 credits
A study of communication theory and the transfer of meaning as they relate to the human transactions of professional pharmacists. Primary emphasis is placed on oral communication with diverse groups of patients, families and other health professionals with emphasis on active listening and empathy, cultural influences, and behavior modification. Writing exercises are also incorporated to enhance student knowledge of written communication as an effective tool for interpersonal communication and documentation of recommendations and consultations.

PHAR 121G – Health Care Systems
2 credits
The course provides an introduction to the United States health care system, managed health care and pharmacy services. The structure, organization, and delivery of health care in the United States are presented with emphasis placed on the pharmacist’s role in patient care. Problems with the system will be covered along with approaches being used to address these problems. Emphasis will be placed on where pharmacy operates within our health care system, how it can be the solution to some of our health care problems and the major currently debatable issues surrounding health care.
PHAR 133G – Introduction to Pharmacy
1 credit
This course covers the scope and history of pharmacy as well as the variety of career pathways that a pharmacist may pursue, including but not limited to, community pharmacy, institutional pharmacy, government positions, education and research. A review of regulations that apply to the practice of pharmacy will also be addressed such as HIPAA and OSHA and a review of ethical practices that will be useful for students as they enter into their clinical experiences will be presented as well as interpretation of prescriptions and medication orders. Registration as Pharmacy Interns with the Georgia State Board of Pharmacy will be completed and a review of expectations and organization for the IPPE component of the curriculum will be presented.

PHAR 141G – Pharmaceutics
3 credits
A study of physical pharmacy and pharmaceutical dosage forms. Students will learn to apply their knowledge of the physical and chemical properties of drugs to the ability to formulate stable dosage forms that can be utilized in commercial production of, or individually compounded, drug products. Students will be introduced to the theory and practice involved in the rational selection of dosage forms and drug delivery systems as well as issues that may arise from these choices. The theory and practice of pharmaceutical compounding, including a discussion of Good Manufacturing Practices (GMPs) and Good Compounding Practices, as well as legal and professional issues are also discussed.

PHAR 145G – Pharmaceutical Calculations
2 credits
An introduction to metrology and pharmaceutical calculations. A brief review of basic mathematical concepts is followed by historical review of measurement systems specific to the profession of pharmacy. Detailed interpretation of the prescription and the variety of abbreviations and notations utilized is followed by presentation of the methods used to calculate, express, or determine the amount of drug to utilize in the preparation of a variety of pharmaceutical preparations. These preparations range from oral, topical, otic, and ophthalmic to parenteral products. Determination of drug concentration, tonicity, equivalents, potency, proof, density and specific gravity are also addressed.

PHAR 150G – Biochemistry
3 credits
An introduction to the physical, chemical, structural, and functional properties of molecules associated with the chemistry of life processes. Carbohydrate, lipid, protein, and nucleic acid biosynthesis and/or degradation will be discussed along with DNA and RNA biosynthesis, enzymology, and gene expression.

PHAR 155G – Pharmacy Practice Laboratory I
1 credit
This laboratory course introduces fundamental skills related to the practice of
pharmacy in a variety of settings. Students are presented with opportunities to utilize contemporary computerized systems to fill inpatient and outpatient prescriptions, prepare sterile products using laminar flow hoods, use automated dispensing stations and become familiar with workflow issues encompassing both community and institutional pharmacy. Skill in common assessment techniques, such as measurement of blood pressure, pulse, blood glucose and peak flow meters, is developed as well as training in pharmacist administered immunizations using the APhA Pharmacy-Based Immunization Delivery certificate program. Dispensing, counseling and drug information skills are also developed.

**PHAR 162G – Pharmaceutics Laboratory**  
1 credit  
Students will become proficient with the equipment, calculations, procedures, and records used in the nonsterile compounding of various dosage forms. Good Compounding Practices adopted by the National Association of Boards of Pharmacy will be followed. Practical examples of compounding of liquid, solid, and semi-solid oral dosage forms as well as enteral and topical products will be prepared as part of the laboratory exercises.

**PHAR 164G – Pharmacy Administration**  
3 credits  
Basic managerial, organizational, and financial management concepts are presented that enable the practicing pharmacist to manage people, change, structural demands, and organizational behavior to provide optimum care and services as a health professional. This course will also introduce entrepreneurial and marketing topics for use in pharmacy and health care system practice environments. The analysis of management principles as they relate to community and health-system pharmacy management will be stressed including planning, organizing, motivation, controlling, and marketing.

**PHAR 167G – OTC**  
2 credits  
This course presents those conditions considered to be self-treatable according to current medical guidelines. For self-treatable conditions, a survey of the products available, their effectiveness, proper selection and appropriate patient counseling are discussed. Counseling strategies specific to OTC products are also presented.

**PHAR 169G – Biopharmaceutics**  
3 credits  
A study of drug absorption, distribution, metabolism and excretion (ADME) as well as individual differences that influence these processes. Drug parameters that control ADME will be studied, such as solubility, pKa, molecular size, and protein binding. Physiological determinants underlying ADME, such as cellular transporters, hepatic metabolism, hepatic and renal elimination, as well as factors affecting drug distribution will also be presented. Finally, the concept of bioequivalence, its determination and application will be presented.
PHAR 211G – Integrated Therapeutics I
4 credits
This is the first course in the sequence that teaches the pharmacology, medicinal chemistry and therapeutics of medicinal agents. The integrated nature of this course emphasizes the interrelationship of these areas that is vital to understanding the basis of patient centered pharmaceutical care. Fundamental knowledge in these areas allows the clinician to understand the theory and application to aid in the selection of the proper therapeutic agent or agents for disease control in the presence of a number of variables including patient variables such as age, gender, diet, and co-existing conditions; drug variables such as potency, adverse effects, interactions, and pharmacokinetics; and others such as cost, availability, and alternative treatments available. This course begins with introductory material from each of the three areas that will aid in better understanding as more detail is added throughout the course.

PHAR 212G – Integrated Therapeutics II
4 credits
This is a continuation of the Integrated Therapeutics sequence. Initially, the drugs affecting the autonomic and neuromuscular systems are discussed followed by discussion of major disease states and the drugs used to treat them. Disease states and their treatment covered in this course are: cardiovascular diseases including hypertension, hyperlipidemias, arrhythmias, angina pectoris, heart failure and renal diseases including renal failure and disorders of fluid, electrolyte balance, and coagulability.

PHAR 213G – Integrated Therapeutics III
4 credits
This is a continuation of the Integrated therapeutics sequence. Disease states and their treatment covered in this course are central nervous system related drugs and disorders including anesthetics, sedative/hypnotics, anxiety, neuroses, major depressive disorder, bipolar disorder, psychoses, epilepsy, and neurodegenerative disorders. Issues impacting geriatric populations are also covered.

PHAR 224G – Immunology and Microbiology
4 credits
An integrated course in immunology and microbiology that emphasizes the role of each in the maintenance of health and the development, progression, and treatment of disease states related to immune dysfunction, microbiological infection, or both. An introduction to innate immunity, including biochemical and cellular aspects, as well as adaptive immunity, including humoral and cell mediated immunity, and immunological memory is followed by a discussion of diseases of the immune system, the role of immunity in neoplasia, and manipulation of the immune system by pathogens, drugs and diet. Basic principles of microbiology including classification, anatomy, staining, and genetics of microorganisms is followed by a more detailed discussion of medically important bacteria, mycoplasmas, rickettsiae, chlamydiae, viruses, fungi, and parasites. Emphasis is placed on mechanisms of pathogenesis,
methods of control, mechanisms of resistance, and prevention of diseases caused by these organisms as well as the inter-relationship between micro-organisms and the immune system.

**PHAR 227G – Pharmacokinetics**
3 credits
General principles of pharmacokinetic models are presented as they pertain primarily to the processes of absorption and elimination of drugs. Detailed mathematical models will be developed and utilized to determine the appropriate dose and dose interval based on patient specific data utilizing relevant examples throughout. Therapeutic monitoring of drug levels in the patient and adjustments in dosing based on monitoring will also be presented. This is followed by discussion of specific examples using drugs commonly dosed and monitored using detailed pharmacokinetic analysis.

**PHAR 241G – Infectious Disease I**
3 credits
This is the first course in the Infectious Disease sequence that teaches the pharmacology, medicinal chemistry and therapeutics of agents used to treat infectious diseases. The integrated nature of this course emphasizes the interrelationship of these areas that is vital to understanding the basis of patient centered pharmaceutical care. Fundamental knowledge in these areas allows the clinician to understand the theory and application to aid in the selection of the proper therapeutic agent or agents for infection control in the presence of a number of variables including patient variables such as age, gender, diet, and coexisting conditions; drug variables, such as potency, adverse effects, interactions, and pharmacokinetics; and others such as cost, drug availability, and alternative treatments available. This course will cover agents used to treat infections caused by bacteria, mycoplasmas, and rickettsiae.

**PHAR 242G – Infectious Disease II**
3 credits
This is a continuation of the Infectious Disease sequence, which covers the pharmacology, medicinal chemistry and therapeutics of agents used to treat infectious diseases. Infections caused by chlamydiae, viruses, fungi, and parasites will be covered in this course.

**PHAR 246G – Pharmacy Practice**
3 credits
Familiarity with basic patient assessment will be followed by discussion of triage and patient referral skills. The fundamentals of clinically relevant patient data, patient histories, screening methods, laboratory values, and diagnostic tests will be used to evaluate and manage common disease states. The value of patient care plans, counseling and identification of therapeutic problems will also be emphasized.
PHAR 256G – Pharmacy Practice Laboratory II
1 credit
This laboratory is an introduction to the interpretation, preparation and dispensing of prescriptions under a variety of practice settings such as retail, institutional, and hospital using both bulk and unit-dose packaged drugs. Prescription analysis will involve the identification of medication errors such as under- and over-doses, drug interactions, and drug allergies. Patient profiles will be maintained and utilized and the role of automation, technology and distribution systems will be addressed. Safe medication use, reduction in medication errors, quality improvement, and workload efficiency will also be emphasized. Students will also be presented with opportunities to practice their skills in patient counseling.

PHAR 271G – Biostatistics
3 credits
This course builds on the statistical background from the prepharmacy curriculum with emphasis on the use of statistical knowledge to evaluate drug literature, and pharmaceutical and health care research, and conduct studies within the practice of pharmacy. Statistical terminology, study design, sampling methods, and statistical analysis using a variety of techniques will be covered. Calculation of statistical results from sample data and interpretation of the results will be presented. Application of this knowledge will be applied to the study of clinical pharmacy problems and analysis of pharmaceutical research and drug literature.

PHAR 311G – Integrated Therapeutics IV
4 credits
This is a continuation of the Integrated Therapeutics sequence. Disease states and their treatment covered in this course are: pulmonary disorders including asthma, emphysema, and COPD; inflammatory disorders including arthritis, autoimmune disorders; pain management; and antineoplastics.

PHAR 312G – Integrated Therapeutics V
4 credits
This is a continuation of the Integrated Therapeutics sequence. Disease states and their treatment covered in this course are: the endocrine system, including hormone regulation and the diseases of diabetes, hypo- and hyperthyroidism, contraceptives and infertility; gastrointestinal disorders such as gastroesophageal reflux disease, ulcers, ulcerative colitis, and Crohn's disease; and finally bone disorders such as osteoporosis and Paget's disease.

PHAR 314G – Hospital Pharmacy
3 credits
Primarily emphasizing the practice of pharmacy in the hospital setting, this course introduces students to medication distribution systems, institutional accreditation, advanced pharmacy practice in hospitals, sterile preparations and admixtures, and inter-professional teams, among others. Discussion of poison
control centers, investigational drugs, automation and central vs. satellite pharmacies will also be discussed.

**PHAR 321G – Pharmacy Practice Laboratory III**

1 credit

This laboratory course introduces the student to the preparation of sterile and biohazardous products encountered in pharmacy practice utilizing the latest technology for maintaining sterility or providing human safety during product preparation. Training in aseptic technique and the preparation of sterile products in a sterile environment, such as total parenteral nutrition admixtures, will be provided with special emphasis on USP 797 regulations. Special procedures, quality control, use of available references, appropriate calculations, and federal and state regulations will also be addressed. Training in the preparation of hazardous pharmaceuticals will also be provided.

**PHAR 323G – Drug Literature Evaluation**

3 credits

A discussion of the types and sources of drug literature, how to search the literature and the publication process is followed by discussion of study design with emphasis on methodology, statistical analysis and evaluation of the results. Finally, the application of the acquired evaluation skills in the delivery of evidence-based pharmaceutical care is presented.

**PHAR 346G – Pharmaco economics**

3 credits

Economic principles are used to study drug use and outcomes in large populations to improve quality-of-life and develop models for allocation of limited health care resources. Methods for continual monitoring of beneficial and adverse effects are also discussed.

**PHAR 351G – Toxicology**

3 credits

A discussion of the general principles of toxicology is followed by specific discussion of toxicities to the liver, kidney, lungs, cardiovascular and reproductive systems. Toxicity resulting from the use of specific drugs is then presented followed by toxicities due to other sources such as exposure to industrial, environmental and household agents, among others. Finally, the prevention, assessment, and treatment of toxicities, with emphasis on the role of the pharmacist, are presented.

**PHAR 368G – Pharmacy Law and Ethics**

4 credits

Federal and state laws and regulations which pertain to the practice of pharmacy in Georgia are presented in detail. General business law and liability issues which affect the practice of pharmacy will also be discussed. Finally, ethical issues as they relate to the practice of pharmacy, and healthcare delivery in general, are examined.
PHAR 375G – Capstone
4 credits
The course is designed to provide students with a comprehensive and integrated assessment of the entire pharmacy program followed by appropriate feedback as a final step to ensure that they are prepared to enter into the Advanced Pharmacy Practice Experiences. Assessment will be designed to imitate, as closely as possible, typical clinical situations that students should be prepared for following the completion of their didactic work and IPPE rotations.

PHAR 377G – Seminar
1 credit
An open forum for discussion of contemporary issues in pharmacy for third year students prior to their progression to the Advanced Pharmacy Practice Experiences. Topics for discussion will come from a variety of sources that may have an impact on the practice of pharmacy. These include accrediting agencies; federal, state and local government regulations; Georgia State Board of Pharmacy and other boards of pharmacy including the National Association of Boards of Pharmacy; and national and local pharmacy organizations; as well as student requested topics.

EXPERIENTIAL COURSES

Introductory Pharmacy Practice Experience (IPPE) Courses

PHAR 171G – IPPE I and PHAR 172G – IPPE II
1 credit each
This is the first and second course in a series of IPPEs that provide direct practical experience to the student in the form of either an institutional or community pharmacy environment in alternate semesters. The student will begin in an observational role and then transition to application and utilization of skills learned in the pharmacy curriculum as it applies to technical pharmacy skills, pharmacy management, distributive systems, and core practice skills: communication, calculations, ethics, medication safety, managing resources, wellness, health promotion, technology, informatics and critical thinking. The skills developed during this sequence will prepare the student to enter into the Advanced Pharmacy Practice Experiences (APPEs) during the fourth year of the professional pharmacy curriculum.

PHAR 261G – IPPE III and PHAR 262G – IPPE IV
1 credit each
This is the third and fourth in a series of IPPEs that provide direct practical experience to the student in the form of either a community or ambulatory care environment (Longitudinal Patient Care Experience) in alternate semesters. In the ambulatory care experience students will become familiar with the role of the pharmacist as part of an interdisciplinary team in the provision of patient care. Students will also conduct patient interviews and review patient profiles/charts. The community experience will continue the development from their first year
introductory pharmacy practice experiences with development of skills in patient interviews, patient profiles/charts, and counseling skills. The skills developed during this sequence will prepare the student to enter into the Advanced Pharmacy Practice Experiences (APPEs) during the fourth year of the professional pharmacy curriculum.

**PHAR 331G – IPPE V**

2 credits
This is the fifth in a series of IPPEs that provide direct practical experience in the form of a community experience that continues the development from their first and second year IPPEs with further development of skills in patient interviews, patient profiles/charts, and SOAP notes. A focus on Medication Therapy Management (MTM) will be emphasized during this IPPE rotation. The skills developed during this sequence will prepare the student to enter into the Advanced Pharmacy Practice Experiences (APPEs) during the fourth year of the professional pharmacy curriculum.

**PHAR 332G – IPPE VI**

1 credit
This is the final course in the series of introductory pharmacy practice experiences and provides exposure to the role of a clinical pharmacist in an institutional practice setting. Students will work with clinical pharmacists and diverse patient populations to develop the requisite knowledge, skills, attitudes, and values for the provision of patient-centered care.

**ADVANCED PHARMACY PRACTICE EXPERIENCE (APPE) COURSES**

**Required APPEs**

**Advanced Institutional**

4 credits
Supervised professional experience in the functions of a pharmacist in the hospital pharmacy practice setting.

**Advanced Community**

4 credits
Supervised professional experience in the functions of a pharmacist in the community pharmacy practice setting.

**Advanced Ambulatory Care**

4 credits
Supervised professional experience in the functions of a clinical pharmacist in the ambulatory care practice setting.

**Advance Acute Care Medicine**

4 credits
Supervised professional experience in the functions of a clinical pharmacist in
the acute care hospital practice setting.

**Elective APPEs (select any 4)**

The following list contains examples of elective APPE sites that may or may not be developed by the PCOM School of Pharmacy – Georgia Campus. The number and type offered in any one year depends upon the availability of suitable sites, faculty, and the number of students requesting the specific elective. Therefore, there is no guarantee a student will be assigned to any one of these specific electives; however, each student will be assigned to four elective sites to complete APPE requirements.

Academia  
Cardiology  
Community Pharmacy Administration  
Community Pharmacy Compounding  
Critical Care  
Diabetes  
HIV/Transplant Clinic Pharmacy  
Home Care Pharmacy  
Hospice  
Independent Community Pharmacy  
Indian Health Service

Pediatrics  
Psychiatric Pharmacy  
Pulmonary  
Women’s Health
BIOM 501 – Molecular Basis of Medicine
7 credits
The course presents fundamental information regarding biochemistry, molecular biology and medical genetics in a way that is highly practical in today’s clinical and/or research setting. This overview course includes discussions of molecular biology and genetics, metabolism and the body’s production and use of energy, and blood-related issues such as blood proteins, lipoproteins and hemostasis. In addition, interactive case discussions and clinical correlations are designed to put the information into a clinical context.

BIOM 502 – The Infectious Process
3 credits
The infectious process course is designed to introduce graduate students to fundamental principles of immunology, bacteriology and virology. This overview includes discussions of the interplay between the microbial pathogen and the host immune response during the infectious process. Representative microorganisms belonging to each class of pathogen (bacterial, viral, fungal and parasite) are discussed. After the introductory lectures, the focus will be on current topics of interest in infectious disease and public health, including vaccines, cancers with an infectious etiology, and eradication of disease.

BIOM 503 – Human Anatomy
6 credits
A comprehensive consideration of the human anatomy as it relates to function in order to provide the anatomical component of diagnosis and treatment. This course will cover the gross anatomy of all systems in the human body including musculoskeletal, neuronal, lymphatic, respiratory, cardiovascular, digestive, urinary and reproductive with an emphasis on structural relationships and functional correlations to clinical applications. Course objectives include the acquisition of anatomical structural knowledge, and the development of team working, oral presentation and written communication skills as well as the development of critical assessment of biomedical literature. Learning is facilitated through lecture, group study of anatomical dissections, team problem based learning with clinical case presentations and a reflective observation team exercise.

BIOM 504 – Histology
4 credits
Students receive fundamental information regarding the structure and function of cells, how cells are organized into tissues and how tissues are organized into organs. In the histology laboratory students learn to identify cells, tissues and organs through a microscope.
 BIOM 505 – Neurosciences
3 credits
This course provides a broad introduction to the basic and clinical neurosciences, including motor function, cerebrovascular blood supply, sensory receptors, higher cortical functions, the limbic system, neurometabolism, and nervous system structure and function.

 BIOM 506 – Medical Pharmacology
3 credits
Medical pharmacology presents an introduction to the basic concepts and principles of pharmacology. Specific lectures are presented in the areas of pharmacokinetics, autonomic pharmacology, cardiovascular pharmacology, CNS pharmacology and the control of pain.

 BIOM 507 – Physiology
3 credits
This introductory course focused on medical physiology correlates the principles of basic functional mechanisms to practical methods for clinical assessment. Students receive hands-on instruction in methods to evaluate physiological mechanisms in a laboratory setting. Classroom and laboratory instruction are correlated to enhance understanding in the following areas: basic electrophysiology, cardiac, skeletal muscle physiology, gastrointestinal, respiratory, cardiovascular and renal physiology.

 BIOM 690 – Research Methods
2 credits
This course introduces students to fundamental concepts of epidemiology and research design in health and disease. Principles of evidence-based medicine are discussed as they relate to key areas of disease prevention, health promotion and therapy discussed. Community-based issues, problems and solutions are addressed. Students who complete the course will be able to understand and apply basic statistical terms and applications as well as various research design models that appear in current medical literature. Students learn to assess the quality of medical literature research designs to study commonly encountered clinical and community issues. Students will learn to describe the relationship between the medical literature and evidence-based medicine. This course is cross listed with PHYA 542.

 BIOM 691 – Biomedical Science Research I
6 – 8 credits
Supervised individual research projects undertaken by students in the program leading to the degree of Master of Science in Biomedical Sciences. A component of the research project is a Journal Club, held in the fall term, that focuses on the presentation of recent literature published in refereed journals. Emphasis is placed on developing basic skills in communicating scientific studies; critical review of literature including research design, data analysis and data interpretation; and recognition of the relationship of previously published
studies with the student’s current work. If BIOM 691 is taken in the summer, then the Journal Club would be in conjunction with BIOM 692.

Prerequisites: BIOM 501, BIOM 502, BIOM 503, BIOM 504, BIOM 505, BIOM 506 and BIOM 507

**BIOM 692 – Biomedical Science Research II**  
6 – 8 credits  
Supervised individual research projects undertaken by students in the program leading to the degree of Master of Science in Biomedical Sciences.

**BIOM 693 – Biomedical Science Research III**  
6 – 8 credits  
Supervised individual research projects undertaken by students in the program leading to the degree of Master of Science in Biomedical Sciences.

**BIOM 699 – Thesis Continuation**  
1 credit  
Students who complete 24 credits of Biomedical Research before successfully defending the thesis must register for thesis continuation credit each semester until passing the defense.
**Master of Science – Biomedical Science Neuromusculoskeletal Concentration – Philadelphia Campus**

This concentration is only open to students pursuing the doctor of osteopathic medicine degree at the Philadelphia Campus.

**BOMM 501 – Advanced Clinical Skills in Neuromusculoskeletal Science I**  
6 credits  
Interactive small group discussion of the advanced NMS sciences and underlying evidence-base needed to apply and/or teach the following topics: the philosophy and art of osteopathic medicine; the art of clinical patient observation, palpatory diagnosis and treatment; physiologic motions (regional and inter-segmental) in evaluation and diagnosis of the spine and pelvis; focused and advanced clinical skills in performing muscle energy and high-velocity low-amplitude OMT for somatic dysfunction in the spine and pelvis; visceral manipulation; osteopathic principles in the management of genitourinary and gastrointestinal disorders.

**BOMM 502 – Advanced Clinical Skills in Neuromusculoskeletal Science II**  
6 credits  
Interactive small group discussion of the advanced NMS sciences and underlying evidence-base needed to apply and/or teach the following topics: advanced clinical skills related to diagnosis and treatment of somatic dysfunction using principles of soft-tissue OMT, myofascial release, ligamentous articular strain, counterstrain, and myofascial trigger points throughout the body; integration of the respiratory-circulatory and primary respiratory models of clinical care; advanced clinical skills in performing muscle energy, high-velocity low-amplitude, balanced ligamentous tension, facilitated positional release, Still technique, ligamentous articular strain, and OCF in the cervical and cranial regions.

**BOMM 503 – Advanced Clinical Skills in Neuromusculoskeletal Science III**  
6 credits  
Interactive small group discussion of the advanced NMS sciences and underlying evidence-base needed to apply and/or teach the following topics: spinal and extremity biomechanics; considerations in postural disorders (including rotoscoliotic and kyphotic-lordotic conditions and integration of orthotics); clinical skills in performing muscle energy and high-velocity low-amplitude to the thoracic spine and costal region; integrated osteopathic and orthopedic exams of the extremities; muscle energy, high-velocity low-amplitude, counterstrain, balanced ligamentous tension, and facilitated positional release for the treatment of extremity somatic dysfunction; osteopathic principles in the management of EENT, cardiovascular, renal and pulmonary systems; advanced topics in viscero-somatic, somato-visceral, somato-somatic and psychosomatic reflexes.

**BOMM 504 – Special Topics in Neuromusculoskeletal Science**  
3 credits  
Focused 40-hour lecture and laboratory course fulfilling the national standards of the Cranial Academy for Osteopathy in the Cranial Field.
BOMM 591 – Practicum Lab 1: Teaching Physician-Level Palpatory and Psychomotor Skills
4 credits
Practical translational application of cognitive information acquired in BOMM 501 to the teaching of psychomotor skills to physicians or physicians-in-training. Emphasis is on describing and teaching palpatory diagnosis, layer-by-layer palpation, barrier palpation and pattern diagnosis. Also emphasized are affective skills and behaviors expected in professionals who teach psychomotor skills.

BOMM 592 – Practicum Lab II: Teaching Physician-Level Myofascial and Craniocervical Psychomotor Skills
4 credits
Practical translational application of cognitive information acquired in BOMM 502 to the teaching of psychomotor skills to physicians or physicians-in-training. Emphasis is on describing and teaching those characteristics associated with myofascial responses to therapeutic interventions (including creep, the hysteresis phenomenon, and various forms of direct and indirect releases). Also emphasized are affective skills and behaviors expected in professionals who teach models of healing.

BOMM 593 – Practicum Lab III: Teaching Psychomotor Skills to Address Systemic and Appendicular Disorders
4 credits
Practical translational application of cognitive information acquired by BOMM 503 to the teaching of psychomotor skills to physicians or physicians-in-training. Emphasis is on developing affective skills and behaviors used by professionals to pique student interest and to identify meaningful, clinically relevant situations connected to the somatic, visceral, axial and appendicular techniques being taught.

BOMM 691 – Research Design
6 credits
Research design in NMS; unique aspects of osteopathic and NMS research design and interpretation; understanding and determining inter-examiner reliability (kappa) in palpatory diagnostic tests; instruments and equipment used in NMS research, research ethics, and the importance of the Institutional Review Board; funding and grantsmanship; practical application of the above topics in selecting a mentor and initiating a research project.

BOMM 692 – Neuromusculoskeletal Tests and Measurements
6 credits
Recording and entering NMS and biomechanical data; applying and conducting inter-examiner reliability (kappa) in palpatory diagnostic tests; quantifying pressures and vectors used in osteopathic palpation and manual treatment; practical applications of the above topics in a research project.
BOMM 693 – Statistical Analysis and Data Synthesis
6 credits
Statistical analysis in NMS studies; designing research posters and presentations; unique aspects of interpreting NMS outcomes.

BOMM 694 – Thesis
6 credits
Preparation and defense of a thesis involving NMS following the guidelines set forth by the College; the thesis process is a one-on-one with an NMS research mentor with committee input.
Master of Science – Biomedical Sciences – Georgia Campus

BIOM 551G – Human Gross Anatomy
5 credits
This course introduces students to a medical gross anatomy presented from three perspectives: 1) systemic, 2) regional, and 3) applied (clinical) anatomy. It uses a lecture format and laboratory sessions using plastinated specimens and models.

BIOM 553G – Basic Concepts in Biomedical Modeling
4 credits
This course introduces general concepts of biochemistry, cell biology and physiology in an integrated fashion to teach students how to integrate medical basic sciences and enhance learning and retention of biomedical information.

BIOM 554G – Neuroscience
4 credits
This course introduces the student to the field of medical neurosciences including cognition, the senses and the neuromuscular junctions.

BIOM 556G – Human Physiology
5 credits
Human medical physiology is taught from a systems approach covering each of the major systems except neuro and their regulation through autonomic and endocrine mechanisms.

BIOM 557G – Microscopic Anatomy and Embryology
6 credits
The histology component of this course covers basic structure and function of eukaryotic cells, how these cells are organized into four tissue types, and then how tissues are organized into organs to support the various systems of the body. The embryology component focuses on gamatogenesis through fetal development and explores embryogenesis for each organ system.

BIOM 558G – Biochemistry, Cellular and Molecular Biology
5 credits
This course provides the basis for understanding concepts of molecular medicine relevant in subsequent coursework in the biomedical sciences. Areas of concentration include biochemistry cell and molecular biology and genetics. Topics include studies of cellular organization; signaling and replication; gene expression and regulation; carbohydrate, lipid, protein and nucleic acid metabolism; enzymes; and mechanisms of inheritance and genetic engineering.

BIOM 602G – Infection and Immunity
5 credits
The content of this course focuses on medical microbiology and immunology covering major pathogens, their mechanisms of infection and transmission and the body’s mechanisms for handling infections and inflammatory responses.
BIOM 603G – Concepts in Pharmacology and Toxicology
4 credits
This course introduces the student to major concepts and drugs used in autonomic and cardiovascular and neuro-pharmacology and toxicology.

BIOM 604G – Nutritional Biochemistry
4 credits
This course introduces the student to the foundation of nutrition as it impacts biochemical pathways within the body.

BIOM 605G – Special Topics
3 – 5 credits
This course number is maintained for use when a need is perceived or requested to meet a one-time need.

BIOM 606G – Analytical Reading
2 credits
This course requires directed readings and presentations of the current literature, exposing students to high impact areas of the biomedical sciences and enhancing critical reading and public speaking skills.

BIOM 607G – Independent Study/Scientific Composition
6 credits
This course requires the student to write a major review article of a topic chosen by the student and supervised by a graduate faculty member. The student must also present his/her topic in a formal presentation by the end of the third term.

BIOM 609G – Biostatistics and Epidemiology
3 credits
(formerly BIOM 552G)
This course introduces the student to basic principles of statistical and epidemiologic methods providing the student with the foundations for research design and critical reading of the scientific literature.

BIOM 693G – Biomedical Research/Elective
6 – 21 credits
Supervised individual research projects undertaken by students in the program leading to the degree of Master of Science in Biomedical Sciences.

BIOM 699G – Thesis Continuation
1 credit
Program Notes
1. The program in Georgia operates a journal club/seminar series. Second year/MS seeking students are expected to attend; Certificate/first year students are encouraged to attend.

2. Non-Thesis students are required to enroll in and complete the writing of a
Review/Term Paper that must be completed during the third term of the second year. To facilitate successful completion of this task in a timely fashion students are required to choose a mentor, select a title, and complete an outline for this project by the end of Term 1 of their second year.
Master of Science – Forensic Medicine

FMED 499 – Basic Human Biology in Forensic Medicine (Pathway Program Only)
3 credits
This course is for students enrolled in the Pathway program that matriculates into the MS Forensic Medicine degree. The course is designed for nonbiomedical bachelor degree students as a preparatory course preceding the forensic medicine curriculum. Part one of this course is an overview of general biology that is pertinent to forensic medicine, and part two is human anatomy and physiology. Basic medical histology will be incorporated into the later part of this course. This course is graded on a pass/fail basis.

FMED 500 – Pathology for Forensic Medicine
4 credits
The course provides a systematic approach to the pathological basis of the principles of forensic medicine. The course begins with an overview of cell injury, death, adaptation, repair and regeneration. It continues with a survey of the dermatological, skeletal, neurological, endocrine, immunological, cardiorespiratory, vascular, gastrointestinal, renal, urological and reproductive systems. Special emphasis is given to conditions of the cardiovascular, cardiorespiratory and central nervous systems that cause death.

FMED 501 – Principles of Forensic Medicine I
6 credits
This course begins with an overview of the field of forensic medicine. This includes discussion of the history of forensic science and medicine. Also discussed are the roles of medical examiners, coroners and non-physician medico-legal death investigators. General principles of crime scene investigation are introduced. Instruction then moves to the science behind forensic medicine. Topics in this section include post-mortem changes, sudden natural death, blunt force injury, sharp-force injury, ballistics and gunshot wounds. Also taught here are asphyxiation, drowning, thermal injuries, electrical injuries and lightning injuries.

Prerequisite: FMED 500

FMED 502 – Principles of Forensic Medicine II
6 credits
This course continues the overview of the field of forensic medicine. Topics covered in this course include forensic study of toxicology, anthropology, odontology, entomology and neuropathology. Students also learn about forensic medicine aspects of motor vehicle accidents, explosions and bombs, bioterrorism and mass fatalities. This course covers use of fingerprinting, trace evidence analysis and DNA analysis in conducting medico-legal investigations. Students will be given an outline of criminal law and considerations in preparing and delivering court testimony. Investigation of special crimes including child abuse,
sexual assault, arson and deaths of persons in custody will be discussed as well as techniques for providing grief assistance.

Prerequisite: FMED 501

**FMED 504 – Research Design and Methodology**

4 credits

This course provides a foundation in research design, concepts and methodology with an emphasis on epidemiology. Students will evaluate the relationship of research design frameworks and research outcomes. The application of biostatistics and epidemiology concepts to the interpretation of the medical literature will also be discussed.

**FMED 505 – Bioethics in Professional Practice**

4 credits

This course introduces students to the field of biomedical ethics and related medico-legal concepts. Material is presented to provide students with a basic understanding of the legal obligations and ethical responsibilities of the health care provider. Topics include research involving human participants and animals, medical and health care ethics, and the implications of applied genetics and biotechnology.

**FMED 506 – Evidence-Based Forensic Medicine**

4 credits

This course introduces students to the emerging field of evidence-based medicine. It begins with a history of the field. Students learn how to ask a clinical question so that it may be answered and how to use that question to formulate an effective literature search to find the best answer to the question. In the next phase, students learn how to evaluate the importance and validity of the evidence. Finally, they learn how to use the evidence-supported answer in a manner that matches the values and views of their patients.

**FMED 508 – Capstone Integrated Experience**

8 credits

The capstone integrated experience project is a research project that will involve field experience and/or research in the area of forensic medicine. The objective is to afford students the opportunity to apply the knowledge and the skills they have acquired through their academic coursework in a real life setting in an area of personal interest within the scope of forensic medicine. This project will culminate with a final paper at the conclusion of the experience.

**FMED 513 – Law and Evidentiary Procedure**

4 credits

This interactive online course focuses on the role of the forensic medicine professional in the legal system, starting with an overview of the American legal system and continuing with an in depth study of evidentiary issues, rules and procedures.
PHYA 501 – Pharmacological Concepts and Pharmacotherapeutics
2 credits
This course is the first in a series of four that provide the physician assistant student with a broad survey of the basic principles of pharmacokinetics, pharmacodynamics and pharmacotherapeutics. This course reviews the mechanism(s) of action, toxicities and interactions of specific drugs and drug classes, as well as providing the students with an introduction to clinical therapeutics. Clinical therapeutics incorporates the physiologic basis and clinical characteristics of disease states relative to pharmacological therapy. Instruction also focuses on general pharmacological principles and infectious diseases.

PHYA 502 – Human Gross Anatomy
6 credits
This course constitutes a comprehensive consideration of human anatomy using a regional approach to the human body. The lecture component of the course consists of a detailed explanation and clarification of the relevant anatomy including general principles and concepts with a strong emphasis on the clinical relevance of each area considered. The laboratory component of the course consists of examination of dissected or prosected cadavers, special dissections by small groups of students on cadavers, examination of plastinated specimens, models, X-rays, cross sections, bones and appropriate videos of human dissection and clinical procedures. An introductory self-study medical terminology section will also be presented.

PHYA 503 – History Taking and Physical Examination
10 credits
This course is designed to provide students with the fundamental cognitive knowledge of interviewing, patient communication skills and general physical examination procedures that are necessary to conduct an appropriate and thorough medical interview and comprehensive physical examination for patients of all ages. Students will develop these patient interview and communication skills and general physical examination procedures through classroom work and structured clinical experiences with standardized patients under simulated conditions. Digital recording capabilities will allow students to review their clinical performance with faculty.

PHYA 510 – Clinical Medicine I
10 credits
This course is the first of a sequence of three courses that are designed to prepare physician assistant students for their professional clinical role. Students continue to develop and refine their patient communication, medical history taking and physical examination skills. This course provides the student with a body-system and problem-oriented approach to understanding the etiology, epidemiology, pathophysiology, clinical manifestations, laboratory and diagnostic studies, and diagnosis and treatment of specific diseases encountered in general practice.
Health care providers will discuss specific focused physical examinations of each body system. Health promotion, disease prevention, medical nutrition, the genetic basis of disease, rehabilitative care, and patient education relevant to each disease is also covered. Students demonstrate knowledge of certain medical instruments and proficiency in selected procedures. Students will orally present patient data as well as document patient information through the use of our standardized patient lab and clinical skills seminars. The specific specialty areas and body-systems covered include infectious diseases, dermatology, endocrinology, otorhinolaryngology, gastroenterology, hematology and pulmonology.

PHYA 511 – Clinical Medicine II
10 credits
This course is the second of a sequence of three courses that are designed to prepare physician assistant students for their professional clinical role. Students continue to develop and refine their patient communication, medical history taking and physical examination skills. This course provides the student with a body-system and problem-oriented approach to understanding the etiology, epidemiology, pathophysiology, clinical manifestations, laboratory and diagnostic studies, and diagnosis and treatment of specific diseases encountered in general practice. Health care providers will discuss specific focused physical examinations of each body-system. Health promotion, disease prevention, medical nutrition, the genetic basis of disease, rehabilitative care, and patient education relevant to each disease is also covered. Students demonstrate knowledge of certain medical instruments and proficiency in selected procedures. Students will orally present patient data as well as document patient information through the use of our standardized patient lab and clinical skills seminars. The specific specialty areas and body-systems covered include cardiology, urology, neurology, nephrology, ophthalmology, oncology and rheumatology. Students are certified in basic cardiac life support.

PHYA 512 – Clinical Medicine III
12 credits
This course is the third of a sequence of three courses that are designed to prepare physician assistant students for their professional clinical role. Students continue to develop and refine their patient communication, medical history taking and physical examination skills. This sequence of courses provides the student with a body-system and problem-oriented approach to understanding the etiology, epidemiology, pathophysiology, clinical manifestations, laboratory and diagnostic studies, and diagnosis and treatment of specific diseases encountered in general practice, general surgery, general pediatrics and the emergency room. Health care providers will discuss specific focused physical examinations of each body-system. Health promotion, disease prevention, medical nutrition, the genetic basis of disease, rehabilitative care, and patient education relevant to each disease is also covered. Students demonstrate knowledge of certain medical instruments and proficiency in selected procedures. Students will orally present patient data as well as document patient
information through the use of our standardized patient lab and clinical skills seminars. The specific specialty areas and body-systems covered include obstetrics and gynecology, geriatrics, orthopedics, surgery, emergency medicine and pediatrics. Students will also take an advanced cardiac life support course.

PHYA 514 – Professional Practice Issues and Health Policy
3 credits
This course will expose students to many of the principles and practices of health policy. It will include consideration of the impact of socioeconomic issues affecting health care, an overview of selected aspects of the various health care systems, and financial and productivity issues relevant to the PA profession. Quality assurance, risk management, managed care environments, coding and billing, patient referrals, and other issues pertinent to current health care practice will be discussed. Students will learn about cultural issues and their impact on health policy. Also covered in this course are the history, development and current status of the physician assistant profession in the U.S. medical system in the 21st century as well as the political and legal issues related to PA practice. This course presents overviews of PA professional organizations, and PA program accreditation, as well as certification and recertification of PAs. The interrelated issues of licensure, credentialing and professional liability are also covered.

PHYA 515 – Medicine, Law and Health Care Ethics
1 credit
This course is presented to provide physician assistant students with an understanding of basic medical law, public health policy and medical ethics. Lectures in medical ethics and law/medical jurisprudence are presented to provide students with a basic understanding of the legal obligations and ethical responsibilities of the health care provider, both personally and professionally. This course also presents the fundamentals of health policy, violence prevention, death/dying decisions, commitment to patient welfare, respect for self and others, impact of genetic technology, disease control and basics of clinical preventive medicine.

PHYA 517 – Genetics
1 credit
This course is designed to introduce the PA student to concepts of genetics/genomics including genetics terminology, patterns of inheritance, utility of genetic family history in practice, recognizing genetic contribution to disease, genetic screening, pre-symptomatic testing, diagnostic testing and pharmacogenetics. The course will also cover some of the ethical, legal and social implications related to the provision of genetics services. (This is a year long course starting in the fall.)

PHYA 519 – Human Physiology
4 credits
This course is designed to provide a comprehensive review of normal human physiology using a regional approach to the human body. The lecture component
of this course will consist of a detailed explanation and clarification of the relevant physiology including general principles and concepts with a strong emphasis on the clinical relevance of each area considered.

**PHYA 520 – Pharmacology I**

2 credits

This course is the second in a sequence of four courses that represent a broad survey of the basic principles of pharmacokinetics, pharmacodynamics and pharmacotherapeutics. This course reviews the mechanism(s) of actions, toxicities and interactions of specific drugs and drug classes, as well as provides the students with an introduction to clinical therapeutics. Clinical therapeutics incorporate the physiologic basis and clinical characteristics of disease states relative to pharmacologic therapy. Combined lecture and problem-based learning case presentations are designed to develop the pharmacologic and therapeutic skills that a physician assistant will need to enhance patient care in clinical practice, focusing on the following specialty areas: infectious diseases, dermatology, endocrinology, otorhinolaryngology, hematology and pulmonology.

**PHYA 521 – Pharmacology II**

2 credits

This course is the third in a sequence of four courses that represent a broad survey of the basic principles of pharmacokinetics, pharmacodynamics and pharmacotherapeutics. This course reviews the mechanism(s) of actions, toxicities and interactions of specific drugs and drug classes, as well as provides the students with an introduction to clinical therapeutics. Clinical therapeutics incorporate the physiologic basis and clinical characteristics of disease states relative to pharmacologic therapy. Combined lecture and problem-based learning case presentations are designed to develop the pharmacologic and therapeutic skills that a physician assistant will need to enhance patient care in clinical practice, focusing on the following specialty areas: neurology, urology, nephrology, ophthalmology, oncology, cardiology and rheumatology.

**PHYA 522 – Pharmacology III**

1 credit

This course is the fourth of a sequence of four courses that represent a broad survey of the basic principles of pharmacokinetics, pharmacodynamics and pharmacotherapeutics. This course reviews the mechanism(s) of actions, toxicities and interactions of specific drugs and drug classes as well as provides the students with an introduction to clinical therapeutics. Clinical therapeutics incorporate the physiologic basis and clinical characteristics of disease states relative to pharmacologic therapy. Combined lecture and problem-based learning case presentations are designed to develop the pharmacologic and therapeutic skills that a physician assistant will need to enhance patient care in clinical practice, focusing on the following specialty areas: obstetrics and gynecology, pediatrics, geriatrics, orthopedics, emergency medicine and general surgery.
The primary goal of this course is to provide the physician assistant student with the necessary skills, knowledge and sensitivity to deal effectively with various psychiatric, emotional and behavioral issues common to patients in primary care settings. Students will be able to outline skills in coping with illness, injury and stress. Students will gain skills in the evaluation and management of patients with a variety of psychiatric problems as well as an appreciation for the health care team as it applies to the mental health patient. This course includes a mixture of didactic presentations, group discussions and interviews with standardized patients.

This course provides students an opportunity to interface with community-based agencies and become familiar with diverse communities, both their challenges and their resources. In addition, this course allows students to develop a better understanding of how social, environmental and cultural factors can impact their patients’ attitudes about health. Throughout this course, students learn the importance of collaboration when developing relevant and effective health care interventions.

This is the second of a sequenced two-term course that allows students to develop a better understanding of how social, environmental and cultural factors can impact their patients’ attitudes about health. In this course students have the opportunity to perform an ongoing community service project with a population of their choice.

This course is the first of a sequence of three courses that provides the student with a basic understanding of the nature and mechanisms of disease from a pathologic view. This study of pathology provides understanding of the nature and mechanisms of disease, which is the foundation for critical thinking in clinical practice. This sequence of courses provides a systematic approach to the physiologic basis for disease. The general pathology of cell injury, inflammation, infections and neoplasia is presented along with the disease processes of organ systems including the immunologic, dermatologic, hematologic, gastrointestinal and respiratory.

This course is the second of a sequence of three courses that provides the student with a basic understanding of the nature and mechanisms of disease from a pathologic view. This study of pathology provides understanding of the nature
and mechanisms of disease, which is the foundation for critical thinking in clinical practice. This sequence of courses provides a systematic approach to the physiologic basis for disease. Lectures are focused on the disease processes of organ systems, the renal, urinary, ophthalmologic and neurologic systems.

**PHYA 537 – Pathology III**
2 credits
This course is the third of a sequence of three courses that provides the student with a basic understanding of the nature and mechanisms of disease from a pathologic view. This study of pathology provides understanding of the nature and mechanisms of disease, which is the foundation for critical thinking in clinical practice. This sequence of courses provides a systematic approach to the physiologic basis for disease. Lectures are focused on the disease processes of organ systems including the female and male reproductive and endocrine systems as well as disease presentations in pediatric and geriatric patients.

**PHYA 542 – Research Methods**
2 credits
This course introduces students to fundamental concepts of epidemiology and research design in health and disease. Principles of evidence-based medicine as they relate to key areas of disease prevention, health promotion and therapy are discussed. Community-based issues, problems and solutions are addressed. Students who complete the course will be able to understand and apply basic statistical terms and applications as well as various research design models that appear in current medical literature. Students learn to assess the quality of medical literature research designs to study commonly encountered clinical and community issues. Students will learn to describe the relationship between the medical literature and evidence-based medicine (EBM). This course is cross listed with BIOM 690.

**PHYA 543 – Evidence-Based Medicine**
2 credits
This course begins with the importance of evidence-based medicine as it relates to treatment strategies of disorders commonly treated by PAs. Key concepts on how to search, read and decipher various levels of scientific medical literature are covered. The sessions are interactive and prepare students to critically evaluate the clinically relevant issues in a broad range of physician assistant practice areas. Students develop an EBM-style clinical question that will serve as the basis for the Research Practicum completed during the clinical phase of the program.

**PHYA 549 – Radiology for the Physician Assistant**
2 credits
This course is an introduction to the field of radiology designed to provide the physician assistant student with basic knowledge of the use and interpretation of a variety of radiographic studies. Through interactive technology, lectures and case-based problems, students will learn to interpret a variety of diagnostic modalities and understand their use in daily clinical practice.
PHYA 550 – Family Medicine Preceptorship
10 credits
This six-week preceptorship is intended to augment and strengthen the student’s skill in developing a comprehensive database and a system approach to common family medicine problems. Emphasis is placed on generating the information and skills to enable the student to recognize normal findings and assess clinically significant deviations from normal. Students perform patient histories and physical examinations, obtain diagnostic testing and present the data to their precepting physician(s) with a proposed differential diagnosis and treatment plan. This preceptorship will assist the student in learning the indications, limitations and methodology of family medicine procedures and therapeutic strategies. Students function in a role similar to the intended role of a practicing physician assistant. Where possible, students participate in grand rounds, noon conferences and clinically relevant didactic presentations. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

PHYA 551 – Internal Medicine Preceptorship
10 credits
This is a six-week preceptorship that is intended to augment and strengthen the student’s skills in developing a comprehensive database and a systemic approach to common internal medicine and family medicine problems. Emphasis is placed on generating the information and skills to enable the student to recognize normal findings and assess clinically significant deviations from normal. Students perform patient histories and physical examinations, obtain diagnostic testing and present the data to their precepting physician(s) with a proposed differential diagnosis and treatment plan. This preceptorship will assist the student in learning the indications, limitations and methodology of internal medicine and family medicine procedures and therapeutic strategies. Students function in a role similar to the intended role of a practicing physician assistant, including participating in teaching rounds where diagnostic and therapeutic plans for acutely ill patients are discussed, performing and observing various clinical procedures and preparing written and oral communication about patients. Where possible, students participate in grand rounds, noon conferences and clinically relevant didactic presentations. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

PHYA 553 – Emergency Medicine Preceptorship
10 credits
This is a six-week preceptorship that allows the students to augment and strengthen their skills in developing a comprehensive database and a systemic approach to common emergency medicine problems. Emphasis is placed on generating the information and skills to enable the student to recognize normal findings and assess clinically significant deviations from normal. Students will perform appropriate clinical evaluation including focused patient history and physical examinations, obtain diagnostic testing and present the data to their
precepting physician(s) with a proposed differential diagnosis and treatment plan. Students will gain skills that include those necessary for appropriate triage, stabilization of patients with traumatic injuries and illnesses, the management of the less life-threatening problems that present to the emergency room, working with the pre-hospital emergency medical service team and making appropriate secondary referrals. Where possible, students participate in grand rounds, noon conferences and other clinically relevant didactic presentations. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

**PHYA 554 – Gynecology/Prenatal Preceptorship**
10 credits
This is a six-week preceptorship that is intended to augment and strengthen student skills in developing a comprehensive database and a systemic approach to common problems seen in prenatal and gynecologic practice. Emphasis is placed on generating the information and skills to enable the student to recognize normal findings and assess clinically significant deviations from normal. Students will perform appropriate clinical evaluation including focused patient history and physical examinations, obtain diagnostic testing and present the data to their precepting physician(s) with a proposed differential diagnosis and treatment plan. This preceptorship teaches the student the indications, limitations and methodology of prenatal and gynecologic procedures and therapeutic strategies. Students will also receive the experience in managing common outpatient gynecology problems, gynecologic diagnostic techniques and therapy, family planning, assisting at gynecologic surgery and techniques for the early detection of gynecologic cancer. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

**PHYA 555 – General Surgery Preceptorship**
10 credits
This six-week surgical preceptorship augments and strengthens student skills in developing a comprehensive database and a systemic approach to common problems in general surgery. Students perform appropriate clinical evaluation including comprehensive surgical history and physical examinations, obtain diagnostic testing and present the data to their precepting physician(s) with a proposed differential diagnosis and treatment plan. Students assist in surgical procedures in the operating room, the diagnostic evaluation of surgical patients and with preoperative and postoperative care with the ambulatory care of surgical patients. Proficiency is to be developed in suturing, incision and drainage, excision and the biopsy of simple wounds and lesions. Where possible, students participate in grand rounds, noon conferences and other clinically relevant didactic presentations. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.
PHYA 556 – Behavioral Medicine and Long Term Care Preceptorship
10 credits
This six-week preceptorship is split into two sections. Behavioral Medicine will last 4 weeks and Long Term Care will last 2 weeks. The Behavioral Medicine portion involves experiences, primarily in outpatient settings, that allow students to develop skills in the evaluation and management of patients with a variety of psychiatric and addiction problems. Through these experiences, students gain an appreciation for the role of the psychiatrist, psychologist, nurse and social worker in the care of the mentally ill, and become better able to make appropriate psychiatric referrals from primary care. The use of psychoactive pharmaceuticals and the role of psychotherapy in psychiatry are explored. In the Long Term Care portion, students will participate in providing healthcare for the geriatric and long term care patient population in a nursing home setting. This preceptorship allows students to enhance both clinical and communication skills, while providing the opportunity to gain insight and experience in geriatrics and long term patient care. This preceptorship is intended to augment and strengthen the student's deductive reasoning and clinical decision making skills by developing a comprehensive database and a systemic approach to common geriatric medical pathology and the concerns encountered with patients in a long term care facility. Where possible, students participate in grand rounds, conferences and other clinically relevant didactic presentations. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

PHYA 557 – Pediatrics Preceptorship
10 credits
This is a six-week preceptorship for clinical phase PA students that provides inpatient and/or outpatient exposure to a patient population ranging from neonates to late adolescents. This preceptorship will augment and strengthen student skills in developing a comprehensive database and a systemic approach to common problems in pediatrics. Emphasis is placed on generating the information and skills to enable the student to recognize normal findings and assess clinically significant deviations from normal. Students will perform appropriate clinical evaluation including comprehensive history and physical examinations, obtain diagnostic testing and present the data to their precepting physician(s) with a proposed differential diagnosis and treatment plan. The student will have an intense exposure to primary care pediatric problems with the objective of developing skills in well-child preventive care, the care of common pediatric illnesses and the care of the newborn. These experiences are obtained in the outpatient and inpatient setting. A set of learning objectives guides student reading in preparation for a written examination at the end of the preceptorship.

PHYA 558 – Elective Preceptorship
6 credits
This is a four-week preceptorship that offers students an opportunity to complete an elective of their choice. During the didactic portion of the professional phase,
PA program students consider their own clinical practice interests and needs for skill development. Students select a clinical area for their elective with the approval of their faculty advisor. Students develop an individualized learning contract that includes objectives for their elective rotation and a method to demonstrate achievement of these objectives at the conclusion of their preceptorship. Students are responsible for an oral presentation regarding a specific health care topic at the end of their elective preceptorship.

**PHYA 560 – Research Practicum**

*3 credits*

Senior PA students, using the knowledge acquired in prior related courses, are required to ask a clinically relevant question in a clinical discipline common to PA practice. A subsequent search and interpretation of the literature results in the culmination of a year-long project conducting, writing and presenting a systematic review on chosen topics of interest.

**PHYA 562 – Comprehensive Preceptorship Review**

*3 credits*

This course is intended to review and assess the student’s knowledge of core competencies. It includes an extensive board-review style lecture series, directed standardized patient encounters with oral case presentations to a faculty member, a written comprehensive examination and clinical skills testing.
Master of Science in Organizational Development and Leadership
– Philadelphia Campus

ODL 501 – Foundations and Systems of Organizational Development
3 credits
This course is an introduction to the ODL program. It describes the genesis of organization development and how it has evolved over the last 50 years. Students address the importance of using themselves as an instrument of change by creating their own development program that they will use throughout the entire ODL program. The course introduces a consulting model and several models of organizational change that can be applied immediately to the student's work setting.

ODL 502 – Understanding the Business of Organizations
3 credits
This course provides needed background to those students who have not experienced the challenge of operating successfully in a business or business unit. The course focuses on how to establish a strategic direction for a business, create the needed organizational structure, develop and lead the operations of the business, monitor financial results and meet the needs of customers, shareholders and employees.

ODL 504 – Personal and Professional Development
3 credits
This course is an exploration of development from three viewpoints – personal, interpersonal and organizational. Students will examine their own preferences, strengths and motivations as well as the role these play in their relationships. They will assist others in meeting career or personal goals through a mentoring relationship. Topics include feedback, career development, personality preferences, motivation, mentoring, creating a development plan and supporting development in an organization.

ODL 505 – Team Dynamics
3 credits
This course provides a broad overview of different types of teams in the workplace. Discusses the necessary elements of successful teamwork and how to develop these elements. Explores various team roles with a particular focus on team leadership. Exposes students to real-time team dynamics and provides opportunities for practicing diagnosis and intervention skills.

ODL 506 – Social Factors and Cultural Diversity
3 credits
Culture is the set of shared attitudes, values, goals and practices that characterizes a community. These communities exist around gender, race, color, age, differently-abled, sexual orientation, class, religion, ethnicity and nationality. This course examines differences that characterize people of various communities and what happens when they come together in organizations. The dynamics of social factors and cultural diversity in organizations will be
examined through both theoretical literature and pragmatic experience. The course will culminate in the development of strategies for engaging people of various cultures more successfully.

**ODL 507 – Action Research in ODL: Capstone Project Preparation**
**3 credits**
This course is intended as preparation and support for the final Capstone project. It reinforces action research as a critical tenet of organization development, leadership and change. The learning experiences will focus on enhancing action research practice and data collection skills to facilitate deeper-level inquiry, reflection, critical thinking and assessment into the issues that are impacting organizational performance and results. As leadership practitioners, students will learn how to appropriately align the methodologies and interventions with the identified organizational issue(s)/problem(s). As a definitive outcome, students will deliver a draft of the beginning sections of the Capstone project.

**ODL 508 – Leadership for Practitioners**
**3 credits**
This course provides an overview of leadership and organization development practitioner models that effectively lead organizations through the change process. A key focus of the course is to integrate the models presented in class by designing aligned interventions that enhance individual, relational and organizational health.

**ODL 510 – Capstone**
**3 credits**
The Capstone course is taken in the last term of the student's master's work. Working with the program director as her/his advisor, the student demonstrates her/his competence in leading organizational change. Students write a theoretical paper describing how they would enter an organization at a level of responsibility one or two levels above their current position; assume their new leadership role; clarify the current organizational or business challenge; and lead the organization to achieve the desired results.

**ODL 512 – Small and Large Systems: Diagnosis and Change**
**3 credits**
This course gives students an understanding of how to diagnose organizational effectiveness and then plan and implement complex change. Change models will be compared and contrasted based on their ability to produce sustainable business results and engage the hearts and minds of employees. The course will focus on the critical success factors in large-scale change efforts, key elements in personal transitions required to make change work and a leader's role in leading change.

**ODL 513 – Business and Professional Communications**
**3 credits**
This course develops a student's skill level in effective writing and oral presentations. With the emphasis on both conceptual and skill areas, this course helps students develop competence in verbal and nonverbal communication, as well as key writing
principles to create effective memos, letters and reports. In addition, students will learn critical success factors that impact oral and face-to-face communication.

**ODL 514 – Managing Emotional Systems in the Workplace**  
*3 credits*  
This course develops the student’s ability to be more effective in leading change in the workplace by increasing the student’s ability to manage his or her own emotional reactivity and develop an objective perspective on how emotional systems operate. Students discover their own patterns of reactivity and identify how they can diffuse a toxic situation by changing their own behavior.

**ODL 515 – Project Management and Strategic Thinking**  
*3 credits*  
The purpose of this course is to provide an overview of project management and its role in strategic management. It will cover the history of strategy development at the organizational level and apply department-level project management. Additionally, the course will address the implications of strategic project management for team dynamics and organizational development. A text is offered as a guide for project completion. Selected articles will be provided as supplemental reading as well as tools for discussion. Upon successful completion of the course, students will have a basic understanding of strategy and a practical comprehension of project management.

**ODL 516 – Developing Systems Literacy: Organizational Workshop**  
*3 credits*  
(Turbo Course*)  
The organizational workshop focuses on helping people “see” the systematic conditions in which they live and work. It is a day-long group simulation followed by three days of debriefing. This rich learning experience provides an understanding of what is needed to create powerful human systems – systems with outstanding capacity to perform their functions and carry out their mission. This experience and the related frameworks demonstrate what is now understood about systems. They cast a powerful light on organizations.

**ODL 518 – Ethical Effectiveness**  
*3 credits*  
This course explores how one can be effective and ethical while operating within an organization. Students will examine the relationships among personal values, organizational systems, action, control, accountability, ethics, power, political savvy, organizational politics, influence and persuasion, trust and credibility. They will explore the role of missions, values, ethics policies, violation reporting systems, current laws and reporting agencies in the promotion of ethical behavior. The connections to issues of diversity, leadership, teams, decision-making, coaching, mentoring and action research will support and emphasize previous learning.

*Turbo courses are offered on two Friday/Saturday or Saturday/Sunday weekends.*
ODL 519 – Strategic Change: Planning for Organizational Success
3 credits
(Turbo Course*)
Change may be inevitable, but organizational response to change is not. Understanding the nature of change pressures on the organization and developing an effective strategy for organizational change is critical to the long-term success of that organization. Using a combination of background reading, class orientation and business case review, students obtain a general “strategic business perspective” on change in their overall organization. Key change strategies are reviewed and analyzed in detail, providing a diverse “tool kit” of alternative paths-forward for the leader. Students are asked to apply these new alternatives to their own organizational experience and provide new “thought leadership” to existing challenges of change.

ODL 520 – Appreciative Inquiry
3 credits
(Turbo Course*)
Appreciative Inquiry (AI) is a method for discovering, understanding and fostering innovation in systems. AI uses incisive questions to gather positive stories and images leading to the construction of positive possibilities. AI seeks out the very best of “what is” to help ignite the imagination of “what could be.” The aim is to generate knowledge in such a way as to identify important values, expand the “realm of the possible,” help the system envision a desired future, and encourage the successful translation of these values into practice and these images into reality.

ODL 580 - Special Topics in ODL
3 credits
The field of organization development, change and leadership continues to evolve and grow through a spirit of action research inquiry yielding new discovery by global scholar practitioners. This course explores emergent theory and practice in the field of organization development, change and leadership and the implications for improving individual and organizational performance and results. Actual topics will be chosen by the professor(s) and may vary from term to term.

* Turbo courses are offered on two Friday/Saturday or Saturday/Sunday weekends.
Master of Science in Organizational Development and Leadership
– Georgia Campus

ODL 501G – Foundations and Systems of Organizational Development
3 credits
This course is an introduction to the ODL program. It describes the genesis of organization development and how it has evolved over the last 50 years. Students address the importance of using themselves as an instrument of change by creating their own development program that they will use throughout the entire ODL program. The course introduces a consulting model and several models of organizational change that can be applied immediately to the student's work setting.

ODL 502G – Understanding the Business of Organizations
3 credits
This course provides needed background to those students who have not experienced the challenge of operating successfully in a business or business unit. The course focuses on how to establish a strategic direction for a business, create the needed organizational structure, develop and lead the operations of the business, monitor financial results and meet the needs of customers, shareholders and employees.

ODL 504G – Personal and Professional Development
3 credits
This course is an exploration of development from three viewpoints – personal, interpersonal and organizational. Students examine their own preferences, strengths and motivations as well as the role these play in their relationships. They assist others in meeting career or personal goals through a mentoring relationship. Topics include feedback, career development, personality preferences, motivation, mentoring, creating a development plan and supporting development in an organization.

ODL 505G – Team Dynamics
3 credits
This course provides a broad overview of different types of teams in the workplace; discusses the necessary elements of successful teamwork and how to develop these elements; explores various team roles with a particular focus on team leadership; exposes students to real-time team dynamics and provides opportunities for practicing diagnosis and intervention skills.

ODL 506G – Social Factors and Cultural Diversity
3 credits
Culture is the set of shared attitudes, values, goals and practices that characterizes a community. These communities exist around gender, race, color, age, differently-abled, sexual orientation, class, religion, ethnicity and nationality. This course examines differences that characterize people of various
communities and what happens when they come together in organizations. The dynamics of social factors and cultural diversity in organizations will be examined through both theoretical literature and pragmatic experience. The course will culminate in the development of strategies for engaging people of various cultures more successfully.

**ODL 507G – Action Research in ODL: Capstone Project Preparation**  
3 credits  
This course is intended as preparation and support for the final Capstone project. It reinforces action research as a critical tenet of organization development, leadership and change. The learning experiences focus on enhancing action research practice and data collection skills to facilitate deeper-level inquiry, reflection, critical thinking and assessment into the issues that are impacting organizational performance and results. As leadership practitioners, students learn how to appropriately align the methodologies and interventions with the identified organizational issue(s)/problem(s). As a definitive outcome, students deliver a draft of the beginning sections of the Capstone project.

**ODL 508G – Leadership for Practitioners**  
3 credits  
This course provides an overview of leadership and organization development practitioner models that effectively lead organizations through the change process. A key focus of the course is to integrate the models presented in class by designing aligned interventions that enhance individual, relational and organizational health.

**ODL 510G – Capstone**  
3 credits  
The Capstone course is taken in the last term of the student’s master’s work. Working with the program director as her/his advisor, the student demonstrates her/his competence in leading organizational change. Students write a theoretical paper describing how they would enter an organization at a level of responsibility one or two levels above their current position; assume their new leadership role; clarify the current organizational or business challenge; and lead the organization to achieve the desired results.

**ODL 512G – Small and Large Systems: Diagnosis and Change**  
3 credits  
This course gives students an understanding of how to diagnose organizational effectiveness and then plan and implement complex change. Change models will be compared and contrasted based on their ability to produce sustainable business results and engage the hearts and minds of employees. The course will focus on the critical success factors in large-scale change efforts, key elements in personal transitions required to make change work and a leader’s role in leading change.
ODL 513G – Business and Professional Communications
3 credits
This course develops a student's skill level in effective writing and oral presentations. With the emphasis on both conceptual and skill areas, this course helps students develop competence in verbal and nonverbal communication, as well as key writing principles to create effective memos, letters and reports. In addition, students learn critical success factors that impact oral and face-to-face communication.

ODL 514G – Managing Emotional Systems in the Workplace
3 credits
This course develops the student's ability to be more effective in leading change in the workplace by increasing the student's ability to manage his or her own emotional reactivity and develop an objective perspective on how emotional systems operate. Students discover their own patterns of reactivity and identify how they can diffuse a toxic situation by changing their own behavior.

ODL 515G – Project Management and Strategic Thinking
3 credits
The purpose of this course is to provide an overview of project management and its role in strategic management. It covers the history of strategy development at the organizational level and applies department-level project management. Additionally, the course addresses the implications of strategic project management for team dynamics and organizational development. A text is offered as a guide for project completion. Selected articles will be provided as supplemental reading as well as tools for discussion. Upon successful completion of the course, students will have a basic understanding of strategy and a practical comprehension of project management.

ODL 516G – Developing Systems Literacy: Organizational Workshop
3 credits
(Turbo Course*)
The organizational workshop focuses on helping people “see” the systematic conditions in which they live and work. It is a day-long group simulation followed by three days of debriefing. This rich learning experience provides an understanding of what is needed to create powerful human systems – systems with outstanding capacity to perform their functions and carry out their mission. This experience and the related frameworks demonstrate what is now understood about systems. They cast a powerful light on organizations.

* Turbo courses are offered on two Friday/Saturday or Saturday/Sunday weekends.
ODL 518G – Ethical Effectiveness
3 credits
This course explores how one can be effective and ethical while operating within an organization. Students examine the relationships among personal values, organizational systems, action, control, accountability, ethics, power, political savvy, organizational politics, influence and persuasion, trust and credibility. Students explore the role of missions, values, ethics policies, violation reporting systems, current laws and reporting agencies in the promotion of ethical behavior. The connections to issues of diversity, leadership, teams, decision-making, coaching, mentoring and action research support and emphasize previous learning.

ODL 519G – Strategic Change: Planning for Organizational Success
3 credits
(Turbo Course*)
Change may be inevitable, but organizational response to change is not. Understanding the nature of change pressures on the organization and developing an effective strategy for organizational change is critical to the long-term success of that organization. Using a combination of background reading, class orientation and business case review, students obtain a general “strategic business perspective” to change in their overall organization. Key change strategies are reviewed and analyzed in detail, providing a diverse “tool kit” of alternative paths-forward for the leader. Students are asked to apply these new alternatives to their own organizational experience and provide new “thought leadership” to existing challenges of change.

ODL 520G – Appreciative Inquiry
3 credits
(Turbo Course*)
Appreciative Inquiry (AI) is a method for discovering, understanding and fostering innovation in systems, and uses incisive questions to gather positive stories and images leading to the construction of positive possibilities. Appreciative Inquiry seeks out the very best of “what is” to help ignite the imagination of “what could be.” The aim is to generate knowledge in such a way as to identify important values, expand the “realm of the possible,” help the system envision a desired future, and encourage the successful translation of these values into practice and these images into reality.

3 credits
The field of organization development, change and leadership continues to evolve and grow through a spirit of action research inquiry yielding new discovery by global scholar practitioners. This course explores emergent theory and practice in the field of organization development, change and leadership and the implications for improving individual and organizational performance and results. Actual topics will be chosen by the professor(s) and may vary from term to term.

*Turbo courses are offered on two Friday/Saturday or Saturday/Sunday weekends.
Master of Science – Counseling and Clinical Health Psychology

ADDITIONS AND OFFENDER COUNSELING TRACK

HPSY 501 – Neuropsychopharmacology of Substance Abuse
3 credits
This course presents an overview of the biological and neurochemical bases of addiction, with a specific emphasis on the brain mechanisms responsible for the actions of addictive substances.

HPSY 502 – Introduction to Substance Use Disorders
3 credits
This course presents an overview of counseling and psychological theories of substance use disorders, with particular emphasis on the research bases for those theories. Traditional 12-step theories will be covered as well as behavioral and psychodynamic counseling theories.

HPSY 503 – Psychology of Offenders and Offender Change
3 credits
An introductory overview of counseling psychology theories of offending and offender change. Emphasis will be placed on empirically validated counseling approaches to initiating change in offenders.

HPSY 504 – Assessing and Treating Substance Use Disorders
3 credits
The course will present a broad discussion of both traditional empirically validated methods for assessing substance use disorders and effectively treating those disorders. Particular emphasis will be placed on behavioral and cognitive behavioral counseling approaches.

HPSY 505 – Motivational Interviewing
3 credits
This course will present both theory and practice of motivational interviewing, an empirically validated counseling approach for helping clients initiate healthy behavior changes. Using lecture, demonstration and role plays, participants will learn how to do an effective motivational interview.

HPSY 506 – Child, Adolescent and Family Issues in Substance Use Disorders
3 credits
Substance misuse affects a broad range of ages and particularly has an impact on families. This course will review empirically validated counseling approaches to working with children, adolescents and families to reduce the negative consequences of substance misuse. Particular emphasis will be placed on family involvement in the motivation and support of treatments for substance-misusing clients.
HPSY 507 – Addictions and Correctional Counseling: Integrating Seminar
3 credits
This advanced seminar will be used as a forum for practicum students to integrate information from coursework into their practicum work. The emphasis will be on effective use of research and clinical literature in designing and implementing counseling intervention programs for persons with substance use disorders who may also be offenders.

HPSY 508 – Biopsychosocial Basis of Addictions
3 credits
This course presents an overview of the biopsychosocial theories of addiction, with a specific emphasis on integrating these theories into the counseling process. Neurobiological, cognitive-behavior, psychodynamic and traditional 12 step processes will be covered.

HPSY 509 – Advanced Interventions in Addictions Counseling
3 credits
This course presents both theory and practice of motivational interviewing and mindfulness therapy as well as other empirically validated treatments for addicted clients. Using lecture, demonstration and role-plays, students learn how to effectively utilize these counseling techniques in their addiction practice.
Master of Science – Counseling and Clinical Health Psychology

PSY 501 – Theories of Personality
3 credits
This course surveys the various theories of personality and the models of counseling that stem from them. The interaction and effects of forces that influence personality development will be explored.

PSY 502 – Behavioral Change in Counseling Health Psychology
3 credits
This course involves applying learning principles and environmental control to behavioral change in health-related areas. The emphasis is on founding principles, assessment methods, and counseling techniques used to foster health promoting behaviors and decrease maladaptive health-related behaviors.

PSY 503 – Psychopathology
3 credits
This course consists of an advanced study of abnormal human behavior. It covers the etiology, symptomatology, incidence, assessment, treatment and prognosis of the major psychological disorders. Current and recent theoretical approaches and research findings relevant to the etiology and treatment of these disorders will be presented.

PSY 504 – Group Therapy
3 credits
This course traces the major theoretical orientations in group psychotherapy/counseling. Students will learn to apply group approaches to the treatment of mental and medical health problems.

PSY 505 – Clinical Assessment in Counseling Psychology
3 credits
This course covers basic interviewing, assessment and counseling skills. It includes an introduction to clinical interviewing and the development of clinical hypotheses and treatment conceptualizations based on available data.

PSY 506 – Foundations of Psychotherapy
3 credits
Theoretical considerations, principles and problems in cognitive behavior therapy (CBT) and other empirically validated counseling procedures are covered in this course. It is designed to provide an introduction to the basic skills used in counseling generally and CBT specifically.

PSY 507 – Social Psychology and Multicultural Competence
3 credits
This course presents an overview of health and social problems at individual, group, institutional and societal levels. It will also provide an overview of the knowledge, skills and attitudes necessary to understand, communicate with and treat culturally diverse populations.
PSY 508 – Developmental Psychology
3 credits
This course consists of a comprehensive survey of the theory and research concerning the physical, cognitive, emotional, behavioral and social aspects of development. It covers the study of the psychology of the growing person from conception through the elder years.

PSY 509 – Tests and Measurements
3 credits
This course covers the tests and measurement tools used in contemporary counseling psychology with special emphasis on intellectual and personality variables. Critical concepts and strategies in psychological testing including standardization, reliability, validity and test selection are discussed.

PSY 510 – Professional, Legal and Ethical Issues in Counseling
3 credits
The professional and ethical issues confronting the counseling psychology professional in mental health and behavioral medicine are the focus of this course. It emphasizes appropriate management of common legal and ethical dilemmas encountered in clinical practice.

PSY 551 – Physiology, Health and Counseling
3 credits
Normal functions of the human body are explored with an emphasis on understanding chronic medical conditions and communicating with medical personnel. This course emphasizes applications of counseling principles to health care that may promote wellness, foster healing and affect treatment outcome.

PSY 552 – Program Evaluation, Research Methods and Statistics
3 credits
Statistical analysis and research design in psychology are covered including sampling, measurement, hypothesis development and testing, and interpretation of results. This course is designed to teach program evaluation and research methods in psychology while providing the student with a hands-on approach to collecting and analyzing data.

PSY 553 – Counseling Health Psychology: Integrating Seminar
3 credits
Advanced training in the application of counseling theory and techniques to clinical cases. This course integrates the coursework and clinical experiences gained throughout the MS program.
PSY 561 – Practicum/Internship I 3 credits
PSY 562 – Internship II 3 credits
PSY 563 – Internship III 3 credits
A year-long sequence of applied clinical work will promote the development of counseling skills and the integration of theory with real-world experience. In addition, there will be intensive supervision, skill development exercises, and literature reviews tailored to the student’s experiences provided in a weekly seminar.

Prerequisites: PSY 503, PSY 505, PSY 506 and PSY 510

PSY 571 – Career and Lifestyle Development
3 credits
This course provides an understanding of career development, theories, decision-making models and related life factors. Students will also be introduced to career counseling processes, techniques and resources.
Certificate – Applied Behavioral Analysis

PSY 580 – Basic Principles of Applied Behavior Analysis
3 credits
This course is a basic overview and introduction to applied behavior analysis. The topics covered include the history of applied behavior analysis; critical theories and principles, processes and concepts of learning; underlying assumptions and constructs of the applied behavior analysis model; behavioral analysis as an applied technology; the learning-based model of psychopathology; ethical principles in the practice of applied behavior analysis. Prerequisite for all subsequent courses.

PSY 581 – Behavioral Assessment and Functional Analysis of Behavior
3 credits
This course is a comprehensive overview of the principles and practice of behavioral assessment and the functional analysis of behavior. Topics include behavioral assessment methods; behavioral observation and self-monitoring; the process of conducting a thorough and useful behavioral assessment of problematic behaviors; the step by step approach to conducting a functional analysis of behavior; single subject experimental designs for assessing outcomes and experimental evaluation of interventions; measurement of behaviors; graphic display and reporting and interpreting of behavioral data and outcomes; reliability assessment; ethical issues in behavioral assessment. Prerequisite for all subsequent courses.

PSY 582 – Behavior Modification in Applied Settings
3 credits
This course is a comprehensive overview of basic behavioral interventions designed to alter dysfunctional behaviors in clinical and educational settings. Topics include the selection, development, implementation and evaluation of intervention outcomes and strategies including behavior management plans; behavioral procedures for increasing and decreasing behaviors; self-management plans, and contingency management programs; treatment integrity assessment; data-based decision making; systems support mechanisms; and ethical issues in the design and application of behavioral interventions. Prerequisite for all subsequent courses.

PSY 583 – Clinical Applications of Applied Behavioral Analysis
3 credits
This course provides an application of applied behavioral approaches to a variety of common problems in clinical and educational settings. Evidenced-based, “best practices” approaches for a variety of problems are reviewed. Topics include assessment and intervention paradigms for challenging and problematic behaviors; addressing barriers to effective implementation; strategies for maximizing the impact of behavioral programs; identifying and utilizing system support; promoting generalization and maintenance of behavior change; relapse prevention and ethical considerations. Prerequisite for final course.
PSY 584 – Integrating Seminar in Applied Behavioral Analysis
3 credits
This final course in the sequence focuses upon current and advanced topics in applied behavior analysis. The most recent advances related to assessment, functional analysis, treatment, evaluation, and standards of professional practice, ethical and legal considerations will be reviewed. Cases from the literature and practices of the participants will be analyzed and reviewed.
Certificate – Advanced Graduate Studies

PSY 512 – Marriage and Family Counseling
3 credits
This course familiarizes students with various theories of marriage and family therapy, including the historical context of each. Approaches include narrative, psychoeducation, structural, strategic, intergenerational, cognitive-behavioral, and psychodynamic models. Case studies, critical discussions, role plays and video tapes of master counselors are used to deepen students’ understanding of the different counselor’s models.

PSY 575 – Cognitive Behavior Therapy
6 credits
This course focuses on the theoretical, historical, philosophical and technical bases of cognitive behavior therapy. Specific treatments for various psychological disorders will be reviewed, and clinical skills will be developed through the discussion of case presentations. This course is a year-long course that is registered in the fall.

PSY 576 – Cognitive Behavior Therapy – Advanced Seminar
3 credits
Experienced clinicians who are familiar with the cognitive therapy model will have the opportunity to present, review and discuss cases dealing with cognitive and behavioral issues such as conceptualization, intervention and follow-up. Participants are expected to be actively involved in clinical practice.
Special Graduate Programs – Philadelphia Campus

PSY 901 – Dealing with Disabilities in Education
3 credits
This course is targeted toward school administrators and counselors. The week will provide a thorough examination of disability law, ADA, Section 504 and the impact of such regulations on schools and educational leaders. The program will be interdisciplinary and will also provide a basis in medical and psychological disabilities presented by physicians, psychologists and psychiatrists. Testing for ADHD and other learning disabilities will be fully explored.

PSY 903 – Short Term Counseling Interventions: The Cognitive Behavioral Model
3 credits
Intended for school psychologists and counselors, the week will introduce elements of the cognitive behavioral model to provide a new perspective and counseling skills set for participants. The focus will be on short term interventions and will present the essentials of cognitive behavioral theory, strategy and techniques. An exploration of personality disorders in children and adolescents will be featured. The teaching format will be lectures, video demonstrations and case discussions.

PSY 905 – School-Based Mental Health Practice
3 credits
School personnel (e.g., teachers, school psychologists, school mental health workers, school counselors, school administrators) are increasingly being called upon to address the emotional and behavioral needs and problems faced by children. In an effort to meet these challenges and to provide effective interventions, educators must have the knowledge needed to provide effective evidence-based practice. Learn about the newest approaches from leaders in the field.

PSY 906 – Classroom Behavior Management
3 credits
Unruly behavior problems on the part of a small number of students in the classroom often undermine the learning of other students and cause significant frustration for teachers. During this week long course, the participants will learn the Functional Analytic Model, an evidenced-based approach, designed to alter dysfunctional behavior. Participants will understand a model for identifying and defining the specific characteristics of problematic target behaviors, developing behavior assessment strategies, delineating triggering events and conditions that become occasions for problem behaviors to occur, determining factors that maintain problematic behaviors, identifying positive behavior alternatives that are incompatible with problem behaviors, constructing a functional analytic conceptualization of classroom behavior problems, designing effective intervention strategies, and evaluating the impact of behavior interventions. Participants will have ample opportunity to discuss actual cases from their own classrooms and to design behavioral assessment and intervention strategies.
Master of Science – School Psychology

SPSY 501 – Professional School Psychology
3 credits
This course introduces students to school psychology as a profession, from both theoretical and applied perspectives. Alternative roles and functions associated with the practice of school psychology are reviewed, with emphasis on contemporary issues associated with training and service delivery. Class discussions address the domains of training and practice identified in School Psychology: A Blueprint for Training and Practice II (NASP, 1997). In addition, attention is given to historical trends and considerations for the future of the profession.

SPSY 502 – Theories of Personality
3 credits
This course provides an overview of the nature of personality theory and the interaction/effects of forces that influence personality development. Theories of personality selected explore the influence on school practice and psychological research. Freud, Adler, Jung, Murray, G.W. Allport, Rogers, Maslow, Fromm; some existentialists and some social, behavioral or learning approaches are included.

SPSY 503 – Introduction to Research and Data Analysis
3 credits
Course objectives are to understand the basic research designs and the methodological issues in formulating, planning, designing, and implementing, analyzing and interpreting the results of research investigations, as well as ethical and cultural issues. The class format is a mixture of lectures, discussions, and “hands-on” exercises that will allow students to become familiar with the techniques involved in performing research.

SPSY 503B – Introduction to Multicultural School Psychology Research Seminar
2 credits
This course follows from the Introduction to Research and Data Analysis course with an emphasis on multicultural research topics. The course provides students with an opportunity to apply previously learned research skills in developing an idea for a multicultural research project and writing a formal research paper according to APA requirements. Although students do not actually conduct the research, they are required to select a multicultural issue or area of interest and, through a comprehensive review of the literature, develop research questions and hypotheses that they would like to investigate and decide on appropriate statistical tests to analyze findings. The course format is seminar style, where students are provided small group sessions and individual coaching sessions, as needed.
**SPSY 504 – Developmental Psychology**  
3 credits  
This course explores child development from conception through early adulthood, including growth, adaptation and developmental patterns with implications for academic, emotional and social learning. Also, there is a special emphasis on research concerning the development of pro-social behavior, internalization, and gender and moral development as well as the influence of culture and socioeconomic status.

**SPSY 505 – Tests and Measurements**  
3 credits  
Tests and measurements is a course dealing with basic concepts in the selection, administration, scoring and interpretation of educational and psychological tests commonly used in the field of school psychology. Psychometric concepts such as validity and reliability will be examined as will methods for evaluating the quality and technical adequacy of testing instruments. Students will increase their understanding of tests designed for assessing cognitive, neuropsychological, academic and social-emotional functioning. Procedures for interpreting and communicating test results will be introduced and issues related to the social, legal and ethical aspects of assessment will be explored. Lectures, class discussions, student presentations and readings will be used. Student performance will be evaluated via a quiz, a final examination and two paper assignments.

**SPSY 506 – Physiology, Health and Psychology**  
3 credits  
This course is designed to introduce the students to structures and functions of the brain and central nervous system and the influences on human behavior and learning. Neurodevelopmental disabilities, assessment, intervention with children and youth at home and school are among the topics covered.

**SPSY 507 – The Exceptional Child: Psychological/Educational Implications**  
3 credits  
This course is designed to provide a basic knowledge base about development that allows the student to understand atypical development. In doing so, the student will be introduced to a wide variety of developmental disabilities and become sensitized to the implications of these disabilities when working with children and their families. In addition, the student will cover a wide range of developmental disabilities, including learning disabilities, cognitive disabilities, pervasive development disabilities, sensory disabilities, communication impairments and traumatic brain injuries. The course will use lectures, discussions, videotapes, student presentations and guest speakers to provide a comprehensive learning experience.
SPSY 508 – Introduction to Methods of Psychotherapy and Counseling Techniques
2 credits
The major theoretical approaches to psychotherapy and counseling with children and adolescents will be reviewed with special consideration of developmental, social, personal and cultural factors and the applications of techniques in school settings. The course is designed to provide an introduction to the basic skills used in psychotherapy and counseling in general and cognitive behavior therapy (CBT) specifically. Students learn how to deal with social and emotional problems frequently encountered in school-age children. Research focusing on treatment outcome as well as case material will be reviewed. Ethical considerations in the psychotherapeutic treatment of children will also be discussed.

SPSY 510 – Learning: Theory and Application
3 credits
This course provides an overview of current knowledge in the field of learning including the application of learning theory through the educational process. Basic theories/principles will be described and supplemented with contemporary studies. Topics will include cognitive approaches and mental processes including such areas as perception, reasoning, problem-solving, language, imagery and decision-making. Special emphasis will be placed on applications in areas such as education, school psychology and counseling. Lectures, class discussion and reading are used.

SPSY 511 – Curriculum Instruction and Educational Leadership
3 credits
The focus of this course is to introduce students to the fundamentals of school based curriculum including current issues and research. Students will explore current empirically based components of effective instruction and alternative instructional methods for use with students with diverse backgrounds, experiences and needs. A focus of this course will be on the role of the school psychologist as a leader in development and evaluation of appropriate and effective learning programs for all children. School psychologists must also be prepared for their role as educational leaders. Issues of team building, skills for organizing change and effective communication will be highlighted.

SPSY 551 – School Psychology Practicum Field Experience Seminar
2 credits
The course provides advanced training in the application of psychological and educational theory and foundations of practice for children in school settings. The dual focus of the practicum experience at the MS level is on orientation to school settings, particularly with regard to working with multidisciplinary teams, and on curriculum-based measurements. This experience provides an integration of the coursework and the clinical/field experience gained in the program. In addition, there will be supervision, discussion of relevant issues and literature reviews during class sessions. APA and NASP ethical practice and guidelines and
standards are discussed as applied to best practice. Primarily classroom discussion and some lectures are used. Students bring case reviews and general experiences to class for discussion. In addition, students are required to keep a portfolio to document experiences and learning throughout the practicum. This includes practicum logs, supervision notes, supervisor and self-evaluations, ethical and legal issues/practice, behavioral assessment activities, observations, professional interviews, research journal readings, technology, and other relevant traineeship experience.
Educational Specialist – School Psychology

SPSY 509 – Cognitive Behavior Therapy in the Schools
3 credits
The primary goal of this course is to introduce students to the provisions of school-based mental health services from a cognitive-behavioral perspective. The course begins with an introduction to cognitive-behavior therapy (CBT) including its history and basic theoretical tenets. The structure of the class will then build upon theory to a model progressing from assessment and case conceptualization to intervention selection and implementation. The issues revolving around the standards of treatment and quality of care will be addressed. Students will further learn specific techniques and interventions for a variety of child and adolescent issues presented in school settings, such as school refusal, aggressive behavior, student underachievement, ADHD, anxiety, depression and substance abuse. Developmental, multicultural and ethical considerations will be reviewed and discussed. Skills will be developed through case conceptualizations and case discussions as well as role play scenarios.

SPSY 513 – Assessment I: Cognitive Assessment
3 credits
This course addresses both theory and diagnosis of cognitive assessment and identifies the relevant issues/criticisms related to intelligence testing. Students acquire skills in the selection of a broad range of methods for assessing, administering, scoring (including computer scoring), interpreting (including computer printouts), reporting and communicating results of evaluation data on children's cognitive ability and functioning to answer educationally relevant questions. This occurs through developing skills in assessing, observing, interviewing and record and portfolio reviews. Assessment for intervention and outcome will be applied using traditional intelligence testing using Wechsler scales, WPPSI-III, WISC-IV, WAIS-III, Stanford-Binet V and Adaptive Behavior Measures. Through lectures, labs and practice cases, students gain technical skills with these instruments.

SPSY 514 – Multicultural Issues in Psychology
3 credits
This course is part 2 in a sequence of 3 courses focusing on multicultural issues in the field of school psychology. The intent of this course is to present a detailed overview of the complex issues and methods that will serve as a guide to developing multicultural competence, i.e., understanding diversity from a historical, sociological, developmental, educational and psychological perspective. Students are introduced to significant aspects of other cultures while examining their own experiences and developing personal awareness and appropriately applying knowledge to skill-based practices in school settings in order to promote a positive impact on school achievement, self-esteem and personal growth of all children. In addition, students will learn to administer an array of non-verbal and culturally fair assessments and learn how these tests, in conjunction with traditional assessments, inform the practice of school psychology.
SPSY 515 – Assessment II: Personality and Behavior
3 credits
This course is designed to introduce school psychology educational specialist graduate program students to individualized educational assessment practices and their links to educational interventions. The course will address the assessment of the educational needs of exceptional learners with primary emphasis on the basic skill areas of reading, written expression and mathematics.

SPSY 516 – Educational Research and Program Evaluation
3 credits
This course prepares students to participate in program planning and evaluation activities, emphasizing both traditional and newly emerging approaches. The course examines how to plan, implement and evaluate school-based programs. Emphasis is placed on translating research into practice through implementation and evaluation of empirically supported programs and practices. Attention is given to monitoring student progress, at both individual and program levels. Course methods include readings, lectures, class discussions and completion of an applied project.

SPSY 517 – Academic and Behavioral Interventions
3 credits
Students focus on defining current problem areas, strengths and needs of school age children using informal assessment measures such as observations, interviewing, work samples, curriculum-based assessment (CBA), DIBELS, and functional behavioral assessments (FBA). Additionally, students obtain knowledge of using these informal assessment measures as a means to assess progress of evidence-based academic and behavioral interventions in order to determine a student's response to intervention (RTI). Readings, lectures, class discussions, cooperative learning groups and labs are used as methods of instruction.

SPSY 518 – Assessment III: Psycho-Educational Assessment of the Exceptional Learner
3 credits
This is the final course in the assessment sequence, which focuses on the assessment of emotional, social, adaptive and behavioral issues of school-age children. Various formal and informal means of assessment are reviewed including self-report measures, projective assessments, interview and functional behavioral assessment (FBA). Additionally, a cognitive-behavioral therapy model is offered for case conceptualization and treatment or intervention planning.

SPSY 519 – Consultation and Collaboration in Educational Settings
3 credits
This course provides an exploration of consultation theory and practice including evaluating the efficacy of the interventions. Students achieve proficiency in implementing academic/mental health/behavioral consultation models (e.g., Conjoint Behavioral Consultation) and become familiar with other
consultative models for providing services to individual clients. Indirect methods of intervention are explored through different approaches to consultative services for teachers, parents, administrators and other professionals to promote change at the levels of the individual students, classroom, building, district and/or other agency levels. School psychology students gain knowledge of the important features of collaborating effectively with others in planning and decision making. Also, emphasis is placed on teaching students effective communication skills, with an emphasis on understanding individuals of diverse backgrounds and characteristics. This course incorporates readings, lectures, class discussion and role-plays.

SPSY 520 – Effective Prevention and Crisis Intervention at Home and School
3 credits
Based on knowledge of current theory and research about the development of academic, behavioral and emotional issues in children, this course focuses on effective prevention strategies, as well as methods to develop, implement and evaluate programs that help prevent student difficulties at both home and school. This course also addresses crisis intervention ways to provide services in the aftermath of crisis. Readings, guest speakers and student presentations are used as methods.

SPSY 521 – Health Psychology and Medicine Applied to Schools
1 credit
This course focuses on the relationship between physical and mental health and its impact on learning and adaptive functioning of children in school and at home. Assessment and treatment issues are emphasized. Topics addressed include coping with chronic illness, sexual health, chronic pain, eating disorders, teenage pregnancy, AIDS prevention, stress management and other related issues.

SPSY 523 – English Language Learners: Educational Implications and Accommodations
3 credits
This course explores strategies for supporting English Language Learners (ELLs) in formal and informal educational settings. Students are introduced to foundational theories and current research on social and academic factors that influence ELLs’ learning experiences. Emphasis is placed on instructional approaches to support teachers working with linguistically and culturally diverse English Language Learners.

SPSY 552 – Practicum Seminar in School Psychology: Family-School Partnerships
2 credits
In conjunction with coursework, students complete a year-long practicum sequence in the schools during the second year of the EdS program. This field experience is focused on professional intervention practices including assessment, consultation, counseling, informal assessment, and academic and behavioral interventions. The school-based practicum is accompanied by a seminar intended to provide students with additional supervision and didactic
training. Seminar discussions will include, but not be limited to, report writing, interventions and outcomes as well as ethical, legal and professional issues in the delivery of school psychological services. The focus of the Practicum I seminar is on establishing effective home-school relationships within the context of school psychological service delivery.

SPSY 553 – Practicum Seminar in School Psychology: School Structure and Organization
1 credit
In conjunction with coursework, students complete a year-long practicum sequence in the schools during the second year of the EdS program. This field experience is focused on professional intervention practices including assessment, consultation, counseling, informal assessment, and academic and behavioral interventions. The school-based practicum is accompanied by a seminar intended to provide students with additional supervision and didactic training. The Practicum Seminar II focuses on school structure and organization, with emphasis on implementation of school-wide problem solving models for identifying and addressing students’ academic and social/emotional/behavioral needs.

SPSY 554 – Practicum Seminar in School Psychology: Applied Law and Ethics
2 credits
In conjunction with coursework, students complete a year-long practicum sequence in the schools during the second year of the EdS program. This field experience is focused on professional intervention practices including assessment, consultation, counseling, informal assessment, and academic and behavioral interventions. The school-based practicum is accompanied by a seminar intended to provide students with additional supervision and didactic training. The Practicum Seminar III emphasizes legal and ethical issues inherent in the practice of school psychology.

SPSY 561, 562, 563 – School Psychology Internship Seminar I, II, and III
3 credits each term
Total credits 9
This year-long internship and bimonthly college-based seminar serves as the culminating training experience, the Specialist Level Certification School Psychology Program. It is a comprehensive experience through which the interns are required to integrate the knowledge base and applied skills of school psychology in promoting positive educational and mental health practices in resolving individual, group and system-level problems. The experience is designed to provide students with supervision and information on a variety of professional topics and issues. The course will provide students with a forum for sharing their field-based experiences and allow for case reviews of assessment, consultation and counseling in which the interns are professionally involved. Internship experiences include advanced psychoeducational assessment and interpretation with emphasis on intervention strategies and program planning, intensive case analysis and treatment planning, and exploration of ethical and legal dilemmas involved in the delivery of psychological services.
Doctor of Psychology – School Psychology

SPSY 620P – Practicum in Preschool Assessment and Consultation
1 credit
This course is designed to provide a hands-on approach to working in a preschool environment. The students will have an opportunity to work with children from birth to five years of age. Students will be given the opportunity to observe in preschool classrooms, conduct an assessment using the Bayley Scales of Infant Development-II, consult with preschool teachers and primary care physicians, provide interventions, and participate in didactic sessions on topics relevant to preschool psychology. No fee assessed for this course.

SPSY 620 – Preschool Mental Health: Assessment and Intervention
3 credits
This elective course is designed to provide classroom sessions to discuss topics of interest to professionals working in preschool settings. A wide variety of topics will be discussed including preschool assessment instruments, positive behavior management with young children, play development, language development, and working with special needs children in a preschool setting. Case studies will be required and presented as part of the classroom sessions.

SPSY 630 – Psychometrics
3 credits
This course provides doctoral students with the historical, theoretical, and mathematical foundations of psychometrics and psychological measurement. Students will acquire advanced theoretical knowledge necessary to understand and utilize psychometric principles, techniques and measurement skills. Emphasis is placed on helping students identify the strengths and limitations of different psychometric approaches to psychological measurement, including classical and modern test theory and measurement principles. Using both psychometric and psychological theory, students individually research, develop, pilot, and/or administer a psychological measure for subsequent evaluation of its psychometric integrity, and then synthesize their empirical findings into group projects for subsequent scientific presentation. Laboratory assignments using collected data and SPSS statistical software will help students become aware of the psychometric characteristics and limitations of their instruments and the application of test theory principles and techniques. Through lecture, laboratory work and assignments students will demonstrate competency in the area of the scientific foundations of psychometrics in psychology.

SPSY 631 – Ethics and Professional Issues in Psychology
3 credits
The purpose of this course is to promote student knowledge about theory, research and practice pertaining to major issues in psychology. Students will become familiar with the APA and NASP Code of Ethics. Particular emphases are conceptual, professional, legislative, and legal and ethical issues, and emerging problems and opportunities in school psychology.
SPSY 632 – Developmental Psychopathology
3 credits
By integrating a lifespan approach with the development of psychopathology, this course stresses the bilateral interaction between normal and abnormal development. This course will address the issues from birth throughout the adult years.

SPSY 633 – History and Systems
3 credits
This course is designed as an overview of the history of psychology in the Western world. The task will include a historical developmental approach to origins and changes of ideas over time, the study of great persons and schools of thought, and a look at the Zeitgeist of each. Students will examine the nature of psychology and school psychology as a whole, and the influences of philosophical worldviews in areas such as epistemology, ontology, teleology, and axiology. This course is structured to allow students to (re)evaluate their own assumptions and theoretical foundations.

SPSY 634 – Multicultural Community School Psychology
3 credits
This is the final course of a three-part sequence on multicultural issues in school psychology. The course is designed to provide students with an understanding of ways in which culture pervades and interfaces with school, society and community services to children. Students will learn how various multiculturally oriented theories and research are translated into programs that promote prevention and change as they relate to children, families and communities. Emphasis will be placed on linkages between schools and community resources. Working with families from different ethnic backgrounds will enhance the students’ knowledge about cultural competence. Students will be required to conduct field-based experiences by working in urban/suburban/rural school and mental health settings.

SPSY 635 – Advanced Assessment and Prevention/Intervention
3 credits
This course is designed to help refine the assessment skills of psychologists who are familiar with the essentials of psychological and psychoeducational assessment with children, adolescents, and young adults, and to help establish the links between prevention efforts, effective assessment and effective interventions and intervention planning for students. Multicultural issues in prevention, assessment, and intervention will be discussed. Ethical considerations in prevention, assessment, and intervention practices also will be addressed.

SPSY 635P – Practicum in Advanced Assessment and Prevention/Intervention
1 credit
This practicum experience is provided in conjunction with the courses SPSY 691
Cognitive and Affective Bases of Behavior and SPSY 635 Advanced Assessment and Prevention/Intervention. The presentation of content in the two courses has been arranged in a manner that enables students to apply what they learn in the courses directly in their practicum experience. This course provides an opportunity to complete a minimum of 50 hours of supervised practical experience in advanced assessment and prevention/intervention. No fee assessed for this course.

SPSY 636 – Cognitive Behavior Therapy I
1 credit
The primary goal of this course is to introduce the student to the history, philosophy and conceptual model of cognitive therapy. This is the first course in a two-course sequence.

SPSY 637 – Cognitive Behavior Therapy II
2 credits
The primary goal of this course is to build upon the theories and techniques of the introductory course by addressing the practice issues around models of treatment for children in schools and mental health systems. It will include empirically validated treatment models using both modular treatment approaches and manual-based approaches. The use of CBT case conceptualization and treatment for various childhood disorders will be taught. This is the second course in a two-course sequence.

SPSY 638 – Cognitive Behavior Therapy III: Practicum
3 credits
This course is designed to integrate clinical application with theory. This practicum experience is provided in conjunction with SPSY 636 and SPSY 637. Skills will be developed through case conceptualization presentation and discussion of actual cases. This course provides an opportunity to complete a minimum of 50 hours of supervised practical experience in cognitive behavior therapy.

SPSY 640 – Social Psychology and Group Process
3 credits
This course is designed to help the student understand basic principles and concepts of psychology related to the behavior of individuals in social contexts. Special emphasis is placed upon concepts and theories related to group process.

SPSY 641 – Applied School Neuropsychology
3 credits
This course provides students with an overview of learning disorders from a neuropsychological perspective. Students examine the neuropsychological basis of childhood disorders for both identification and service delivery purposes. As the field of learning disorders is diverse, the course emphasizes criteria and content that have an established empirical base. Students will apply their knowledge of the causes and theoretical constructs of learning disorders through didactics, readings, group discussions and case study exercises. Knowledge of
psychological assessment and brain structure and function is required.

SPSY 641P – Applied School Neuropsychology Practicum
3 credits
This practicum experience is provided in conjunction with course SPSY 641 Applied School Neuropsychology. The presentation of content has been arranged in a manner that enables students to apply what they learn in the courses directly in their practicum experience. This course provides an opportunity to complete a minimum of 50 hours of supervised practical experience in school neuropsychology.

SPSY 644 – Consultation in Home, School and Community Settings
2 credits
This course is intended to be an extension of the knowledge and skills acquired in school-based consultation at the specialist level of preparation. Students will develop advanced skills for engaging parents and teachers in collaborative problem solving efforts to address concerns with children's learning and behavior. In addition, the course will address strategies for working with community agencies as partners in addressing school-based problems.

SPSY 645 – Issues in Supervision
1 credit
This course addresses current topics related to the supervision of psychological services in schools and other settings. Theoretical approaches to supervision will be discussed, with emphasis on a cognitive-behavioral model. The primary focus of the course will be on supervision of services provided to children and adolescents.

SPSY 646 – Physiological Bases of Behavior
3 credits
This neuroanatomy and neurophysiology course is designed to provide students with advanced knowledge about the structure and function of the human nervous system. Topics will include an in-depth analysis of the biochemical, physiological, neurological, and neuropsychological influences on human behavior, with content presented through readings, lecture, wet lab, neuroimaging, and neuroanatomy drawing. Although focus is on typical brain development and functioning, this orientation will be contrasted with neuropathology for a better understanding of typical and atypical brain functioning. This course also will expose students to a wet lab training experience, including examination of brain cuttings and neuroimaging findings to foster discussion of brain structure and function. Basic understanding of the biological bases of behavior is a prerequisite for this course.

SPSY 647 – Neuropathology
3 credits
This elective course provides an overview of genetic and acquired brain disorders. The course will provide students with an understanding of the
biological bases of the disorders, how neurological and neuropsychological evaluation can help identify associated characteristics and how interdisciplinary teamwork can lead to optimal treatment outcomes for children with these conditions. Disorders include genetic disorders, birth injury, traumatic brain injury, seizure disorders, brain tumors, metabolic disorders, infectious disorders, and neurotoxic disorders. Frontal-subcortical circuit function and neuropsychopathology will also be addressed. Case studies will highlight the need for differential diagnosis and individualized intervention.

SPSY 681 – Psychopharmacology  
1 credit  
This course emphasizes understanding of current pharmacological strategies in treating psychiatric disorders. The course will rely heavily on case presentations by the instructor, from the text, and by the students. Economic, political, and cultural factors affecting the use of medicines and other psychoactive substances will be discussed. Students will explore the main effects, side effects, and synergistic effects of both psychopharmacologically specific and other medically prescribed drugs and their interactions with the physical systems.

SPSY 682 – Group and Family Therapy with Children and Adolescents  
3 credits  
This course is designed to provide the student with a functional understanding of group and family dynamics from a variety of theoretical schools, including psychodynamic, structural, cognitive-behavioral and transpersonal approaches. Classes will be divided into didactic and experiential components with an end goal of enhancing student ability to integrate content and process as dictated by the developmental level of the child and of the developmental stage of the treatment.

Prerequisites: SPSY 636, SPSY 637 and SPSY 638

SPSY 683 – Research I: Design and Methods  
3 credits  
This course is designed to teach doctoral students the fundamental principles of scientific methodology as applied to psychology and education. The course is intended to provide doctoral students with the ability to be critical consumers of research in the field of school psychology, to enable them to think scientifically and apply this mindset to the evaluation of clinical interventions and educational programs. Upon completion of this course, students will have gained experience in writing a research proposal, translating research problems into testable hypotheses, and considering ethical, professional, and diversity issues related to conducting research with human participants.

SPSY 684 – Research II: Statistics  
3 credits  
This course is designed to teach students essential concepts in planning, selecting, and conducting and interpreting statistical analyses. Course content
includes a review of the application of psychometry, basic descriptive statistics, hypothesis testing, correlation, and univariate, multivariate and nonparametric data analysis techniques and accompanying statistical tests of significance. Qualitative research design and analysis will also be discussed briefly. Data analyses and classroom demonstrations of data analyses will be conducted with SPSS software.

Prerequisite: SPSY 683

3 credits
This course is designed to increase students’ knowledge of the wide array of research methods and designs available for conducting dissertation research and to increase students’ knowledge of the issues related to development, use, and interpretation of psychometric instruments. Over the course of the term, students will be expected to formulate a problem for research, develop hypotheses that address the problem in a testable manner, identify pertinent research literature that will be used in writing the dissertation literature review, and consider research methodologies suited to the testing of hypotheses. Ideas for topics relevant to various areas of school psychology will be introduced weekly.

Prerequisites: SPSY 683 and SPSY 684

SPSY 600 – Introduction to Internship Seminar 0 credit
SPSY 686 – Internship Seminar I 1 credit
SPSY 687 – Internship Seminar II 1 credit
SPSY 688 – Internship Seminar III 1 credit
SPSY 601 – Internship 0 credit
These seminars are for five semesters requiring additional hours at an internship site doing psychotherapy, consultation, intervention, evaluation, psychological assessment and other work appropriate to the role of a psychologist.

Prerequisite: successful completion of comprehensive exam and all coursework

SPSY 690 – Dissertation Seminar
2 credits each term
Total credits 6
The purpose of this course is to promote student knowledge of and support during the dissertation process. Students will meet for class, as well as individually with dissertation committee members in order to facilitate the completion of all the steps leading to the proposal and final approval of the dissertation.

Prerequisite: successful completion of comprehensive exam
SPSY 691 – Cognitive and Affective Bases of Behavior
3 credits
This course is designed to acquaint students with the cognitive and affective processes that underlie how children and adults perceive, feel, think, learn, remember, and behave. Discussions will explore theoretical, conceptual, empirical and clinical issues in order to better understand cognitive-affective behavioral interactions inherent in all humans as well as how cognition, affect, and behavior vary from culture to culture and in different contexts. Areas covered will include sensation and perception, emotion, cognitive abilities, executive functions and basic cognitive processes, lexicons, strategies, skills, and memory capacities.

SPSY 692 – Dissertation
1 credit
After completion of Dissertation Seminar III, students continue to work on the completion of their doctoral thesis and meet with Dissertation Committee members to complete all the steps through final approval. Students register for this course each and every term until they have successfully defended their final dissertation thesis.
**Doctor of Psychology – Clinical Psychology**

**CPSY 600 – Independent Study**

**CPSY 601 – Learning Theories**
3 credits
This course is designed to provide an overview of theories of learning and critical concepts and constructs related to human learning. Consideration is given to basic principles and laws of learning and how they apply to understanding and predicting human behavior. Clinical applications of learning theory and research are reviewed.

**CPSY 603 – Behavioral Medicine**
3 credits
This course is designed to provide an overview of essential content for the preparation of clinical psychologists practicing in primary care and other related medical settings. Particular emphasis is placed upon the clinical psychologist as a practitioner, consultant, teacher, researcher, administrator and role model in the medical setting.

**CPSY 605 – History and Systems of Psychology**
3 credits
This course is designed as an overview of the history of psychology in the Western world. The historical approaches to this task will include a historical developmental approach to origins and changes of ideas over time, the study of great persons and schools of thought, and a look at the Zeitgeist of each.

**CPSY 607 – Cognitive/Affective Bases of Behavior**
3 credits
This course emphasizes theoretical, conceptual, empirical and clinical issues to better understand the cognitive-affective-behavioral interaction. Areas of concern will include modes of thinking, sensation and visual and other sensory perception, motivation, emotion, concept formation, construction of reality and the self.

**CPSY 608 – Social Psychology**
3 credits
This course is designed to help the student understand basic principles and concepts of psychology related to the behavior of individuals in social contexts. Special emphasis is placed upon the social-clinical psychology interface and the role of the clinical psychologist as an applied social psychologist.

**CPSY 609 – Cross-Cultural Cognitive Behavior Therapy**
3 credits
This course addresses fundamental awareness and knowledge of cultural competence components. It builds upon knowledge and skills gained in CPSY 623: Human Diversity: Multiculturalism and Individual Differences and further
develops culturally sensitive conceptualization and treatment skills adapting cognitive-behavioral therapy for broadly defined culturally diverse populations.

Prerequisite: CPSY 623

CPSY 612 – Cognitive Behavior Therapy for ADHD
3 credits
This course examines the current clinical practice and professional literature for ADHD. Topics covered include assessment, comorbid difficulties and disorders, social implications, neuropsychology, and multimodal treatment of this neurocognitive disorder. Controversies regarding multicultural and political issues will also be addressed. Although this course encompasses the assessment and treatment of both children and adults, the emphasis is on cutting edge research into the application of CBT, often in collaboration with pharmacotherapy, for adults with ADHD.

CPSY 614 – Advanced Behavior Therapy
3 credits
This course is designed to both supplement and continue the material that was covered in CPSY 662: Behavior Therapy. The purpose is to provide students with further experience in the use of advanced behavior therapy techniques (e.g., progressive muscle relaxation, systematic desensitization, covert sensitization and covert positive reinforcement, thought stopping, assertive training) following consideration of the conduct of the behavioral analysis. Didactic material including specific clinical examples and group discussion will be complemented by demonstrations, role-play and video material when possible.

Prerequisites: CPSY 630 and CPSY 662

CPSY 616 – Lifespan Development
3 credits
This course offers a multifaceted approach to learning about human development. It provides both an empirical and theoretical examination of human development across the lifespan. It is the intention of this course to acquaint the student with essential concepts and models of development. Psychological principles and historical and recent research in the areas of prenatal, cognitive, language, socioemotional and physical development will be explored and cultural considerations will be incorporated. Overall, this course is aimed at providing a comprehensive, clinically-oriented overview of lifespan development.

[Please note: CPSY 616 and CPSY 620 replace former program requirements CPSY 611 and CPSY 613]

CPSY 620 – Psychopathology
3 credits
The goal of this course will be to familiarize students with the current diagnostic nosology as well as prominent features associated with psychological disorders.
[Please note: CPSY 616 and CPSY 620 replace former program requirements CPSY 611 and CPSY 613.]

CPSY 622 – Ethics in Psychology
3 credits
This course familiarizes the student with the APA Code of Ethics, the Pennsylvania Licensing Law for Psychologists and the Specialty Guidelines for the Delivery of Services. It will also discuss the difference between legal and ethical issues and a variety of professional issues.

CPSY 623 – Human Diversity: Multiculturalism and Individual Differences
3 credits
The intent of this course is to present an overview of issues and methods that will serve as a guide to developing multicultural competence, i.e., the knowledge, skills and attitudes necessary to understand, communicate with and treat a culturally diverse patient population.

CPSY 624 – Research I: Research Design and Methodology
3 credits
Course objectives are to understand the basic research designs in clinical psychology and the methodological issues in formulating, planning, designing, implementing, analyzing and interpreting the results of research investigations.

Prerequisite: undergraduate or graduate statistics course

CPSY 625 – Research II: Psychometrics and Univariate/Multivariate Statistics and Lab
4 credits
This course has three major goals. The first goal is to teach doctoral students fundamental and advanced principles and essential concepts in measurement applied to psychological phenomena (commonly referred to as Test Theory or Psychological Measurement). The second major goal is to teach doctoral students fundamental and advanced principles and essential concepts in planning, selecting, conducting, and interpreting statistical analyses of empirical research studies in clinical psychology. The third major goal is to help students develop basic proficiency in the use of SPSS as a tool for analyzing data sets.

Prerequisite: CPSY 624 completed with a grade of B- or better

CPSY 626 – Assessment I: Assessment of Cognitive Abilities
3 credits
This course identifies the relevant issues/criticisms related to intelligence and intelligence testing. Students will be able to administer, score and interpret the most current edition of the WISC and WAIS, analyze data and organize it in a meaningful way to communicate to the client and prepare complete comprehensive written reports.
CPSY 627 – Assessment II: Objective Personality Assessment  
3 credits  
This course covers the definition, identification and assessment of a variety of personality functions through the use of objective assessment instruments.  

Prerequisite: CPSY 626 completed with a grade of B- or better  

CPSY 628 – Assessment III: Projective Assessment  
3 credits  
This course covers the definition, identification and assessment of a variety of personality functions through the use of projective assessment instruments. Particular emphasis will be placed on the Rorschach and Thematic Apperception Test (TAT).  

Prerequisites: CPSY 626 and CPSY 627 completed with a grade of B- or better  

CPSY 629 – Physiological Bases of Behavior  
3 credits  
This course introduces the student to the structures and functions of the brain and central nervous system. In addition, the interrelationship between biochemical, physiological and neurological influences on human behavior will be explored.  

CPSY 630 – Cognitive Therapy  
3 credits  
The two primary goals of this course are to introduce the student to the history, philosophy and conceptual model of cognitive therapy and to address the practice issues revolving around models of treatment, standards of care and the importance of empirically validated treatment.  

CPSY 632 – Assessment and Treatment of Cluster B Personality Disorders  
3 credits  
The focus of this advanced seminar is the exploration of the clinical entities that are codes on the DSM IVTR Axis II, Cluster B including Antisocial, Borderline, Histrionic and Narcissistic Personality Disorders. This course focus will be on the assessment, differential diagnosis, conceptualization, treatment planning, treatment implementation, and the evaluation of treatment outcome related to these disorders. Therapist self-care, resistance, counter-transference and other impediments to the therapeutic alliance and to the therapeutic bond will be emphasized.  

CPSY 633 – Forensic Psychology  
1 credit  
Practicing psychologists are frequently called upon to testify in court. This course focuses on the role of expert witness, and how to be most effective in that role. It provides an overview of the legal system, the law that permits psychologists to testify as experts, and the basics of preparation to work with attorneys and within the court system.
CPSY 634 – Pediatric Psychology
3 credits
This course provides students with an overview of the relationship between children’s physical health and their mental health, academic functioning and socio-emotional well-being. A systems approach emphasizes strategies to collaborate with the family, school and health care system. Prevention and wellness promotion programming are discussed. Culturally responsive assessment and intervention strategies to address chronic medical conditions are taught. Legal issues, ethical practice and professional development pertaining to children with health-related issues are also emphasized.

CPSY 635 – Test Development
1 credit
This course is designed to teach students advanced principles, concepts and best practices in designing, developing and evaluating psychological instruments. The course is specifically aimed at providing students with the ability to create and design a psychological inventory of a specific construct in a step by step format. From a measurement theory perspective, students will proceed through the stages of test development including identifying the need for the test; construct identification and clarification; principles of item construction; standardization and administration; designing and scoring item responses; principles of data collection and item analysis; principles of establishing and testing reliability; and methods for establishing and evaluating validity.

CPSY 636 – Qualitative Psychology
1 – 3 credits
The purpose of this course is to promote student knowledge about qualitative methods of research in psychology. Qualitative research generates in depth understanding and rich description of contextual and individual experiences, which can be used to improve practice and generate knowledge about the process and outcomes of school and clinical psychological services. Particular emphasis is placed on the applied use of the grounded theory paradigm.

CPSY 638 – Private Practice: How to Build a Viable Practice in Today’s Managed Care Environment
1 credit
This course consists of a comprehensive description of everything practitioners need to know if they plan to start a private clinical practice, including marketing, developing referral sources, advertising, brochure designing, picking the best location, providing office amenities, selecting phone systems and billing software and hiring of staff. The history of mental health managed care will be discussed and students will gain knowledge of various insurance vehicles. The advantages of insurance-free practice, general versus specialty practice, sole proprietor versus partnerships or corporations, and child focused services versus adult and geriatric services will be presented. All issues concerning fees, such as setting fees, collections, dealing with no-shows and responding to late cancellations will be described. Malpractice insurance, risk management, and quality management
will be discussed in depth, as will the advantages of being a cognitive-behavioral therapist in the private sector. Ethical issues related to the development of a private practice will also be addressed.

**CPSY 639 – Sleep Disorders**  
**3 credits**
The content of this course follows a progression from basic sleep issues, circadian rhythms and sleep function to methods of evaluating sleep disorders. Common sleep disorders and their treatment will be presented along with sleep issues unique to children and the elderly. Sleep disturbances associated with mood, anxiety and other psychological disorders will also be presented.

**CPSY 640 – Anxiety Disorders**  
**3 credits**
Anxiety spectrum disorders including generalized anxiety, phobia, panic disorder and obsessive/compulsive states will be studied from a conceptual and treatment perspective. Common behavioral, cognitive, medical and affective issues of anxiety will be discussed through a variety of modalities.

Prerequisites: CPSY 603, CPSY 607, and CPSY 630

**CPSY 641 – Affective Disorders**  
**3 credits**
Major depression and bipolar disorders will be the focus of this course. Common behavioral, cognitive and medical issues of affective disorders will be discussed through a variety of modalities.

Prerequisites: CPSY 603, CPSY 607, CPSY 614 and CPSY 630

**CPSY 642 – Personality Disorders**  
**3 credits**
Common behavioral, cognitive, medical and affective issues in dealing with the patient with personality disorder will be examined. A variety of assessment instruments, including the MMPI I and II, Rorschach, Thematic Apperception Test and Million Scales, will be used.

Prerequisites: CPSY 603, CPSY 607 and CPSY 630

**CPSY 643 – Therapy with Couples**  
**3 credits**
This course focuses on the treatment of dyadic relationships. Various theoretical and technical models of couple-based therapy will be discussed and demonstrated.

Prerequisites: CPSY 602, CPSY 603, and CPSY 630
CPSY 645 – Family Therapy
3 credits
This course focuses on the treatment of families. Various theoretical and technical models of family-based therapy will be discussed and demonstrated.

Prerequisites: CPSY 603 and CPSY 630

CPSY 646 – Child/Adolescent Therapy
3 credits
The treatment of children and adolescents with school, home, social or intrapersonal difficulties is covered. Various treatment modalities including outpatient, family, inpatient and residential options will be discussed.

Prerequisites: CPSY 603 and CPSY 630

CPSY 647 – Substance Abuse
3 credits
The abuse of various substances including alcohol, narcotics, caffeine, nicotine, prescription drugs and amphetamines will be discussed. Common behavioral, cognitive, medical and affective issues in dealing with the substance-abusing patient will be discussed.

Prerequisites: CPSY 603, CPSY 607, and CPSY 630

CPSY 648 – Neuropsychological Assessment
3 credits
Neurochemistry, neuropsychology, neurophysiology and neuropathology will be covered. Diagnostic and treatment issues of patients with various neurological disorders will be discussed from the medical and psychological perspectives.

Prerequisites: CPSY 607, CPSY 626, CPSY 627 and CPSY 628

CPSY 649 – Biofeedback I
3 credits
Psychophysiological fact and theory will serve as the basis for training in the specialized therapeutic situation created when individuals are placed in a feedback loop with their own physiological processes.

Prerequisites: CPSY 603, CPSY 607, and CPSY 630

CPSY 650 – Pharmacology
3 credits
The psychologist working with the physician must be knowledgeable about the main effects, side effects and synergistic effects of both psychopharmacologically specific and other medically prescribed drugs. This course introduces the student to the rationale and choices of drugs used in medical practice.

Prerequisite: CPSY 607
CPSY 651 – Pain Management
1 – 3 credits
The purpose of this course is to provide an overview of the assessment and treatment of acute and chronic pain. Topics include but are not limited to: historical foundations, the biopsychosocial model, psychological factors, assessment and treatment strategies including cognitive-behavioral approaches, special populations and future directions.

Prerequisites: CPSY 603, CPSY 607 and CPSY 630

CPSY 652 – Practicum I
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing the basics of evaluation, psychological assessment, psychotherapy and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material includes teaching, modeling and practice with a work sample demonstrating a manually informed, empirically supported approach to treatment; role-play and demonstration of motivational interviewing; role-play and demonstration in using the SCID; review and self-evaluation of STEPPS tapes; practice using Person's model of case formulation; and practice using cognitive-behavioral assessments and treatment plans. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

CPSY 653 – Practicum II
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing the basics of evaluation, psychological assessment, psychotherapy and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material includes teaching, modeling and practice with work samples demonstrating skills for forming a working alliance with clients with a variety of individual and culturally diverse characteristics; demonstrating a functional analytic model formulating case conceptualizations; recognizing and addressing biases, preconceptions and assumptions from a cognitive-behavioral perspective; administering, scoring and interpreting cognitive, behavioral and personality assessment measures, and providing feedback to clients and referring professionals; adopting a hypothesis-testing approach to clinical decision-making; understanding important diversity, ethical, legal and professional dilemmas in the practice of clinical psychology; and applying the Psychotherapy Skills Inventory as a form of self-evaluation and peer consultation of psychotherapy skill. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.
CPSY 654 – Practicum III  
**1.5 credits**  
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing the basics of evaluation, psychological assessment, psychotherapy and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material builds upon skills learned in Practicum I and II, and includes teaching, modeling and practice with work samples demonstrating competency in interpreting and writing up a comprehensive psychological assessment; reviewing and evaluating a faculty STEPPS tape; and developing a case formulation using Nezu and Nezu’s Problem Solving Model. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

CPSY 655 – Practicum IV  
**1.5 credits**  
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing the basics of evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material builds upon skills learned in Practicum I, II and III, and includes modeling and practice with work samples demonstrating consultee-centered consultation; intermediate-level competency in selected cognitive therapy techniques; review and evaluation of a faculty consultation videotape; use of peer consultation; professional development and introduction to the APPIC Application for Psychology Internship; and management skills, by reviewing the utilization review and quality assurance policies at their practicum site and conducting a group interview in class of an expert from a major leading managed care/behavioral health provider around important issues related to utilization review and quality assurance. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

CPSY 656 – Geropsychology  
**3 credits**  
The focus of this course is to examine in depth the process and concomitants of aging. The biopsychosocial, medical, physiological, behavioral and cognitive components are explored.

Prerequisite: CPSY 607

CPSY 657 – Group Therapy  
**3 credits**  
Group psychotherapy will examine the unique strengths and “curative” factors associated with this modality. Boundaries, group composition and other critical
aspects of group dynamics will be examined. Various group models including cognitive-behavioral, problem solving and other behavioral approaches, interpersonal and developmental models will be reviewed.

Prerequisites: CPSY 603 and CPSY 630

CPSY 658 – Treatment of Complex and Difficult Patients
3 credits
This course is an elective that is designed to introduce students to the patient who requires more time and energy and may have difficulty making progress in treatment. Through the use of videotapes, role-playing, experiential techniques, didactic presentations, class discussion, case presentations and readings, this course will focus on the difficult patient.

CPSY 659 – Biofeedback II
3 credits
Psychophysiological fact and theory will serve as the basis for training in the specialized therapeutic situation created when individuals are placed in a feedback loop with their own physiological processes.

CPSY 660 – Practicum Elective
1 – 2 credits
This practicum is designed for doctoral students interested in obtaining additional practicum experience and includes a 2.5-hour weekly seminar at PCOM and 8 hours/week at a practicum site doing evaluation, psychological assessment, psychotherapy and other work appropriate to the role of a psychologist. Supervision by PCOM faculty or designated supervisors is provided. Each credit represents 84 hours of work.

CPSY 661 – Administration, Consultation and Supervision of Behavioral Health Care
3 credits
This course is designed to provide students with the skills for conducting clinical supervision, mental health consultation, and the management of mental health services associated with a variety of administrative and clinical supervisory positions.

Prerequisites: CPSY 652 and CPSY 653

CPSY 662 – Behavior Therapy
3 credits
This course is designed to introduce students to the philosophy and practice of behavior therapy. A major goal of this course is to help students effectively utilize basic behavioral techniques. Emphasis will be placed on understanding how learning principles inform the application of these techniques and the importance of implementing these techniques within the context of a carefully considered behavioral case conceptualization. Students will gain experience in
functional behavioral assessment and numerous behavioral intervention strategies (e.g., contingency management, relaxation training, systematic desensitization, exposure, response prevention).

Prerequisite: CPSY 601 with a grade of B- or better

CPSY 663 – Behavioral Assessment
3 credits
The course covers the fundamentals of behavioral assessment and distinguishes them from traditional assessment. Psychometric issues addressed include reliability, validity and reactivity of assessment. Methods of assessment include behavioral interviewing, behavioral observation, self-monitoring, cognitive assessment, psychophysiological assessment and others. Finally, behavioral assessment for a few clinical problems is also discussed.

Prerequisites: CPSY 603, CPSY 626, CPSY 627, CPSY 628 and CPSY 630

CPSY 664 – Psychology of Eating Disorders
3 credits
This course provides an overview of current theory, research and practice regarding the treatment of anorexia nervosa, bulimia nervosa and other variants of disordered eating. Clinicians will learn evaluation and treatment planning procedures, with attention to developing the therapeutic relationship and to professional collaboration.

Prerequisites: CPSY 603, CPSY 607, and CPSY 630

CPSY 665 – Educational Assessment
1 - 3 credits
This course is an elective that is designed to introduce graduate students in clinical psychology to the field of individualized educational assessment practices and their links to educational interventions. The course will be presented from the general perspective of developmental cognitive neuropsychology and the application of process-oriented assessment techniques.

CPSY 667 – Internship
1 credit
PsyD students must register for each academic term in which the internship is served.

CPSY 670 – Problem-Solving Therapy for Medical Patients
3 credits
This course is designed to provide an in depth survey of problem-solving therapy and its applications. The course focuses on training students to conduct this empirically supported, manually driven approach, and also teaches students to adopt a problem-solving approach to clinical decision-making. Emphasis is on problem-solving therapy for persons with medical conditions such as cancer,
irritable bowel syndrome and multiple sclerosis; discussion and examples of problem-solving therapy's application to treatment of anxiety and depression are also highlighted.

CPSY 671 – Program Planning and Evaluation of Mental Health Services
3 credits
The course provides students with the theoretical foundations and methods used in planning and evaluating programs to prevent and/or service DSM-IV-TR mental disorders. Specific attention will be given to methods and models for: 1) assessing mental health needs in the community; 2) planning and designing mental health-related prevention and service programs; and 3) evaluating the effects of community-based programs to prevent and/or service DSM-IV-TR mental disorders.

CPSY 672 – Cognitive Behavioral Assessment and Treatment of Children
and Families Part I: Treatment of Enuresis, Encopresis, Stealing, Fire
Setting and Other Disorders of Childhood
1 credit
This course reviews fifteen cognitive-behavioral techniques as they relate to the treatment of children. Students learn to develop treatment protocols that include practical clinical strategies for the treatment of enuresis, encopresis, stealing, and fire setting. Myths and facts about causes and treatment of enuresis are discussed, as are outcome studies and medication issues. Procedures for dealing with common parenting issues such as sibling rivalry, teasing, and whining are also described.

CPSY 674 – Research III: Dissertation Development Seminar
3 credits
This course teaches students the step-by-step processes involved in the dissertation process from beginning to end. Students develop a research question, secure a dissertation chair, and compile an extensive bibliography related to their doctoral dissertation research project.

Prerequisite: CPSY 624 and CPSY 625 completed with a grade of B- or better; successful completion of Essay and Objective Comprehensive Exams

CPSY 674A – Research IV: Methodology Development and Statistical
Planning
3 credits
Students develop an extensive, detailed outline of their literature review. Following this, students develop the methodology and statistical and analytic plan for completing their dissertation research project. Issues such as selection of an appropriate design model, subject recruitment and assignment, and selection of proper data analytic models are covered. Finally, students begin the process of completing the literature review based on their outline and bibliography.
CPSY 674B – Research V: Manuscript Development and Defense Planning; Dissertation Advisement
3 credits
During this course, students complete their dissertation proposals, secure all three members of their dissertation committee, and schedule. Finally, they conduct the defense of their dissertation proposals which includes an oral presentation of their research project in a PowerPoint presentation.

CPSY 675 – Dissertation Advisement
1 credit
After students have completed Research V, they continue to work on the completion of their doctoral thesis and meet with dissertation committee members and work on their own to complete all the steps through final approval. Students register for this course each and every term in which they are enrolled until they have successfully defended their final dissertation thesis.

CPSY 676 – Psychology of Gender
3 credits
This course addresses the differences and similarities between women and men and how they relate to one another. To what extent are gender differences due to biology, to what extent to environment and to what extent the interaction of the two, as a function of time and place?
Prerequisite: CPSY 608

CPSY 677 – Harm Reduction
3 credits
Harm reduction is an evidence-based approach to understanding and working with substance users and persons who are dually diagnosed in both clinical and community settings. This course presents an overview of harm reduction from a variety of perspectives including government policies and how they affect treatment, societal perspectives, bioethics and clinical work with substance users and dually diagnosed persons. A variety of guest lecturers present harm reduction as it is implemented in the real world. Participants also explore their own values and beliefs about psychoactive substances and the people who use them.

CPSY 678 – Assessment and Treatment of Addictive Behavior
3 credits
This course provides an overview of the epidemiology, etiology, and assessment and treatment of addictive behaviors including substance abuse, gambling and excessive sexual behavior. The focus is on research-based understanding of addictive behaviors and on current theoretical and technical knowledge and controversy in the field.
CPSY 679 – Child Therapy
3 credits
Psychotherapy with children requires a unique set of skills and understanding of
the therapeutic process. This course focuses on the theoretical underpinnings of
common therapeutic techniques used in psychotherapy with youth. Interpersonal, emotional and cognitive therapeutic change mechanisms are
addressed. Basic techniques in assessment, play therapy, family therapy and
cognitive behavioral therapy are reviewed. In addition, this course examines
intervention programs for common psychiatric disorders while emphasizing an
individualized approach to treatment. Participants will develop an appreciation
for the complex nature of childhood disorders and the diversity of circumstances
in which they occur. As children's behaviors occur within a multicultural context,
emphasis will be placed on establishing interventions that are developmentally
sensitive, culturally diverse, and ethically sound when working with children
and adolescents. This course is designed to present an overview of issues and
methods that will help provide participants with the awareness, skill, and
sensitivity necessary to understand, communicate with and effectively treat
children and their families.

CPSY 680 – Comprehensive Exam Review
(not for credit)
Students preparing for the comprehensive exams during terms in which no other
courses are taken may register for exam review for assistance and access to
campus resources.

CPSY 681 – Essay Comprehensive Exam
(not for credit)
Students register for this portion of the comprehensive exam during the first term
in which the exam is offered upon student’s eligibility.

CPSY 682 – Objective Comprehensive Exam
(not for credit)
Students register for this portion of the comprehensive exam during the first term
in which the exam is offered upon student’s eligibility.

CPSY 684 – Grief, Loss, and Bereavement
1 credit
This course focuses on working with persons who are facing end-of-life issues for
themselves or loved ones, or who are experiencing a loss, more broadly defined.
Theoretical models for understanding grief and their applications will be
discussed. Ethical and legal considerations and the role of the psychologist in
end-of-life care will be introduced. Therapeutic approaches to working with
persons experiencing loss or grief will be explained. Great emphasis will be
placed on preparing students to work with those in grief and bereavement
through introspection, self-reflection, and exposure to the types of persons and
situations that may present with grief and loss as the primary presenting concern.
CPSY 685 – Cross-Cultural Assessment
3 credits
The goal of this course is to identify the principles, theories, issues and practices that help to inform the assessment of individuals from diverse cultures. Students will explore the multicultural methods of assessment needed when using “standard” objective and projective methods and techniques.

CPSY 686 – Cognitive Behavioral Treatment of Crisis
3 credits
The strategies and techniques for intervening in crisis situations are the focus of this course. The goal is to provide a theoretical and conceptual basis as well as a rationale for a cognitive behavioral format for the delivery of crisis intervention services.

CPSY 690E – Rehabilitation Psychology
1 – 3 credits
This course introduces students to the concepts and techniques of working in rehabilitation settings. The core components of physical and cognitive rehabilitation are introduced. Special populations including stroke/TBI, amputees, chronic pain patients, cardiac and low vision will be covered. The course will describe the elements of the psychologist's role within the framework of an interdisciplinary team. Moreover, issues of working in various settings, including acute hospitals, rehabilitation hospitals, outpatient rehabilitation settings, and vision centers will be addressed. Students will be exposed to a thorough review of the practice of cognitive rehabilitation applied to patients with cognitive disorders.

CPSY 691E – Cognitive Behavioral Assessment and Treatment of Children and Families Part II: Treatment of School Phobia and Other Common Phobias of Childhood
1 credit
This course describes the causes and prevention of childhood phobia. Seventeen etiological factors linked to school phobia will be identified, as will fourteen effective treatment strategies. Students will learn to develop treatment protocols which will include practical clinical techniques for the treatment of night terrors, fear of water, small animals, thunder, insects, sleeping alone, and the after effects of molestation. Strategies for the treatment of obsessive compulsive disorders and eating disorders will also be discussed.

Note: CPSY 672 is not a prerequisite for this course.

CPSY 692E – Crisis Mental Health and Disaster Response
3 credits
This course explores key components of disaster mental health, including how disaster mental health services differ from traditional psychotherapy; the design of mental health programs needed in disaster; and how mental health systems are delivered in a disaster. This course presents an overview of issues and methods
that will help provide students with the awareness, skill, and sensitivity necessary to understand how to intervene effectively with special populations and at-risk groups in a disaster, including children, older adults, people with disabilities, ethnic, and cultural groups indigenous to the area, and/or people living in poverty with few resources.

CPSY 694E – Crisis Intervention
1 credit
This course provides an overview of crisis theory, strategy, and intervention, targeting specific and frequently encountered crisis situations faced by practicing psychologists in all levels of care. The course will review evidenced-based practices, and best practices specific to those crisis scenarios, and discuss psychologist requirements and necessary skill sets. In addition, specific cognitive-behavioral interventions for specific crises scenarios will be presented, in concert with discussion on functioning as a member of a multidisciplinary team.

CPSY 695E – Professional Development Seminar
1 credit
Each term of a 1 credit Professional Development Seminar is designed to expose students to focused topics relating to competencies of clinical psychologists that will prepare them to function in a multitude of practice settings. Topics may include leadership, diversity and individual differences as pertaining to current concerns in psychology, inter-professional collaboration and integrated healthcare, leading health and psychosocial problems, advocacy, trends in evidence-based practice, business practices in psychology, self-care, and others.

CPSY 697E – Special Topics: Cognitive Behavior Therapy for Posttraumatic Symptomatology
1 credit
This course is designed as a special topics course as the focus will be on specific groups when offered. It is an introduction to the cognitive-behavioral treatment of PTSD. A background on PTSD-specific treatment issues will be given as well as a brief review of the empirically supported treatments and treatment elements. The remainder of the course will consist of an introductory training in the methods of Prolonged Exposure therapy for PTSD.

CPSY 698E – Faith and Clinical Practice
3 credits
Faith is an inner resource most people possess. Yet few clinical training programs are intentional about teaching their students how to leverage their client’s faith to aid in therapy. This course will provide a model for using the clients’ own faith tradition as a therapeutic resource.

CPSY 699E – Cognitive Behavioral Assessment and Treatment of Panic Disorders
1 credit
This course provides an intensive and highly focused overview of relevant
clinical literature about the nature, assessment, diagnosis, conceptualization, and treatment of panic disorder as well as extensive practical skill-building in assessing and treating patients with this problem.

CPSY 703 – Clinical Research Practicum
1 credit
The Clinical Research Practicum is designed to instruct students in the process of research development, data collection, data management and analysis, and data reporting of applied clinical research designed and led by core faculty. Students will often have opportunity and responsibility for direct client/patient contact, learning about empirically supported treatments or development of empirical testing of treatments, grant submission, and administering and scoring clinical measures that can be used for research and practice. Student participation and advisement/instruction may be individual or in groups.

CPSY 704 – Assessment and Treatment of Angry Patients
3 credits
This course provides an overview of the history of emotions and the normal expression of anger, as well as its psychopathology. The theories and paradigms that have been used to study anger are explored. Anger, as it presents in various populations and the special considerations this requires, is also explored.

CPSY 705 – Personality Disorders in Children and Adolescents
3 credits
Are children who manifest certain traits displaying what may be precursors to later personality disorders, or can they be diagnosed as having a personality disorder during childhood or adolescence? Clinicians have responded in a number of ways, ranging from the affirmative to the negative with a host of ethical, “legal,” and conceptual issues evoked for support. This course investigates that question and presents arguments for and against the diagnosing of children and adolescents as having a personality disorder. The issue is viewed through the lens of the cognitive behavioral model and examines what techniques would be useful for children and adolescents.

CPSY 710 – Practicum V
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing the basics of evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material builds upon skills learned in Practicum I, II, III, and IV, and includes teaching, modeling and practice demonstrating patient-centered case consultation; beginning supervision skills; intermediate to advanced proficiency in interpreting and writing up of a psychological assessment or test battery; and developing a comprehensive, behavioral assessment and treatment plan derived from Needleman’s model of
case formulation. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

**CPSY 711 – Practicum VI**
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing more advanced evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Building upon Practicum I through V students develop teaching skills by 1) conducting an in-service education presentation at the practicum site to demonstrate an empirically based approach to intervention, and 2) reading and grading a scholarly paper submitted by a non-matriculated student attending a workshop in cognitive behavioral therapy with a senior faculty member. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

**CPSY 712 – Practicum VII**
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing more advanced evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Course material builds upon skills learned in Practicum I through VI, and culminates in a Capstone requirement of a comprehensive case study that includes video/audio of therapy session, assessment battery and report on same patient, a case-conceptualization and treatment plan, a tape of a supervision session, and a PowerPoint of an in-service training session led by the student. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.

**CPSY 713 – Practicum VIII**
1.5 credits
Minimum of 8 hours/week at practicum site (12 or more hours a week are expected by most practicum sites) and a weekly seminar at PCOM performing more advanced evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a beginning psychologist. Supervision by PCOM faculty or designated supervisors is provided. Additional elective practicum hours are an option. Additional Capstone requirements include demonstration of an assessment consultation work sample; supervision of a master's level student in psychology; advanced case conceptualization skills; advanced cognitive-behavioral assessment and treatment planning; and teaching and administration skills in academics and health care organizations. Students are expected to serve as peer consultants during weekly case discussions with a focus upon diversity issues.
Postdoctoral Certificates – Clinical Health Psychology and Clinical Neuropsychology

CPSY 802 – Clinical Foundations of Neuropsychology
3 credits
This course introduces the current state of the field and well-recognized and commonly used approaches in the clinical understanding of human brain behavior relationships.

CPSY 803 – Advanced Ethics, Health Policy, and Multicultural Competency in Medical Settings
3 credits
This course focuses on the application of the APA Code of Ethics, the Pennsylvania Licensing Law for Psychologists and the Specialty Guidelines for the Delivery of Services to delivery in multidisciplinary health care settings and in care of medical patients. The difference between legal and ethical issues and a variety of professional issues will be addressed. Emphasis will be placed on ethical decision making often encountered in working with clinical health and neuropsychology/rehabilitation populations.

CPSY 804 – Traumatic and Degenerative Brain Disorders
3 credits
This course offers a survey of clinical research as it relates to behavioral recovery following damage in the central nervous system. Recent theories and literature are stressed. Case studies and direct application to clinical work will be emphasized.

CPSY 805 – Cognitive Habilitation and Rehabilitation
3 credits
This course develops advanced clinical psychology skills specific to work within rehabilitation settings. The core components of physical and cognitive rehabilitation are built upon. Issues of working within an interdisciplinary team and in various settings, including acute hospitals, rehabilitation hospitals, outpatient rehabilitation settings, and vision centers will be addressed. Students will be exposed to a thorough review of the practice of cognitive rehabilitation applied to patients with cognitive disorders. Case studies, clinical treatment planning, and direct application to clinical work will be emphasized.

CPSY 820 – Behavioral and Health Psychology Assessment
3 credits
This advanced course familiarizes students with diagnostic techniques and clinical assessment tools and skills necessary for practice in various medical, surgical, and multidisciplinary health care settings. Measures used for clinical practice and research investigations will be covered. Students will be guided to adopt appropriate clinical decision-making skills for selection of assessment approaches, and will gain practice in the use of appropriate instruments in these settings. Students are required to have had clinical psychology assessment
courses prior to enrolling in this course.

**CPSY 850 – Clinical Placement – Clinical Health Psychology**  
1 credit  
Minimum of 10-16 hours/week at a clinical site and a weekly seminar at PCOM performing more advanced evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a clinical health psychologist. Supervision by PCOM faculty or designated supervisors is provided. Course material builds upon certificate courses and culminates in a professional evaluation via standardized patient programs.

**CPSY 860 – Clinical Placement – Clinical Neuropsychology**  
1 credit  
Minimum of 10-16 hours/week at a clinical site and a weekly seminar at PCOM performing more advanced evaluation, psychological assessment, psychotherapy skills, and other work appropriate to the role of a clinical neuropsychologist. Supervision by PCOM faculty or designated supervisors is provided. Course material builds upon certificate courses and culminates in a professional evaluation via standardized patient programs.

**NON-CREDIT COURSE**

**WRIT 100 – Writing Seminar**  
0 credits  
This course is a non-credit course that is open to all students at the Philadelphia Campus. This course is designed to assist students in developing strategies for accessing their thoughts and conveying them through analytical and reason-based essay writing. It provides students with a tool kit which each can adapt to his/her specific needs to improve his/her writing. Students will also critique analytical writing for clarity and adherence to APA style. Fee $500.00.
ACADEMIC DEPARTMENTS AND FACULTY

THE FACULTY OF PCOM - Teaching in Philadelphia
A highly qualified faculty of physicians, psychologists, physician assistants, educators, scientists and support staff implement the educational goals of the College. Faculty members are dedicated to the singular purpose of educating Students for the skilled and caring practice of osteopathic medicine and the health professions. The academic programs are served by many faculty across the country who provide clinical instruction at various affiliated sites as volunteer faculty. In a real sense, education at PCOM is carried out by this larger PCOM family. Faculty concentration and dedication show in the teaching students receive. Faculty appointments are listed under the College departments in which they serve.

Anatomy

Professor and Chair
Tage N. Kvist, PhD

Professors
Marina D’Angelo, PhD

THE FACULTY OF PCOM - Teaching in Georgia
A highly-qualified faculty of physicians, pharmacists, educators, scientists and support staff implement the educational goals of the College. Faculty members are dedicated to the singular purpose of educating students for the skilled and caring practice of osteopathic medicine, pharmacy and the health professions. In a real sense, education at GA-PCOM is carried out by this larger GA-PCOM family. Faculty concentration and dedication show in the teaching students receive.

Sudhindra Krishnarao Anegundi, MD
David N. Armstrong, MD
Martin A. Baggett, MD
Stanley C. Baker, MD
Alan J. Berlin, MD
Thomas Brandt Jr., DO
Jan C. Brandys, MD
Bruce H. Brenneman, MD
Daniel M. Daly, MD
Mark S. Duffield, DO
Jeffrey C. Easom, DO
Robert A. Edwards, DO
Eugene Eline, DO
Anthony Elisco III, DO
Lewis D. Friedlander, MD
Kenneth L. Goldman, MD
David C. Harkins, DO
James Harper, MD
Charles W. Hartzog, MD
Michael A. Hellwege, MD
Barry J. Hennessey, DO
Davey D. Herring, MD
Paul J. Jarrett, MD
Robert A. Jenks, MD
Douglas B. Kasow, DO
John E. Keith Jr., MD
John P. Kelley, DO
Frank D. Kendrick, MD
Andrew S. Leopff, DO
Gary A. Levengood, MD
Kristine Lombardozzi, MD
Norman F. McGowin, MD
Miles H. Mason III, MD
Edmund M. Molnar, MD
Charles B. Moomey Jr., MD
Brian E. Morgan, MD
Fara Movagharnia, DO
William P. Pannell, MD
Jeffrey R. Pyne, DO
Rhett K. Rainey, DO
Barry M. Renz, MD
Donald H. Rosenbaum, DO
Ranjan S. Roy, MD
Stephen W. Samuelson, MD
Robert J. Sass, DO
David Schmidt, MD
Paul Seltzer, DO
Andrew C. Shatz, MD
Charles E. Singleton, MD
Morton Slutsky, MD
Kenneth L. Smith, MD
Michael S. Smith, MD
Michael T. Thompson, MD
Terry A. Treadwell, MD
Christopher M. Vaughn, MD
Arnold J. Weil, MD
David M. Whiteman, MD
Jeffrey D. Zwiren, MD

Clinical Instructors
Michael S. Champney, MD
Vincent S. Culpepper, MD
Marc S. Eskin, DO
Maurice Jove, MD
Glenn G. Kasow, DO
Walid A. Khuri, MD
Thomas K. McBride, MD
Virgle W. McEver III, MD
Craig M. Mines, MD
Arie E. Pelta, MD

REGULATORY COMMITTEES

Human Studies (Institutional Review Board)
Institutional Animal Care and Utilization
Institutional Environmental Health and Safety
The Alumni Association of PCOM was formed on September 8, 1902, two years after the first physician graduated from Philadelphia College and Infirmary of Osteopathy. The purpose of the Alumni Association is to act as a liaison between the College and its more than 9,500 living DO alumni and over 1700 graduate program alumni who practice throughout the United States, in eleven foreign countries and in every branch of the military service. In addition, the association encourages the promotion of PCOM to prospective students and provides financial support for excellence in osteopathic and healthcare education. Contributions to the Alumni Association support the increasingly critical programs and services underwritten by the association.

Throughout the year, the Alumni Association sponsors programs that benefit its members and current students. An active interest is taken in student life. Upon request, information is provided on PCOM alumni to students pursuing electives, mentors and preceptorships across the country.

The Alumni Association supports the annual PCOM Golf Classic and underwrites a large portion of the expenses associated with the annual Reunion Weekend and other events throughout the year.

The Alumni Association is governed by a Board of Directors, composed of elected representatives from regional districts around the United States. Meetings are held twice a year, in January and June. All alumni of Philadelphia College of Osteopathic Medicine are members of the Alumni Association.

Alumni Association programs and services are supported by alumni and the College. The Office of Alumni Relations and Development administers the Alumni Association and keeps alumni notified of key developments. The office maintains the alumni database and supports special events for alumni on campus and at national and regional conferences.
